UK companies are governed by legal and other regulatory requirements impacting elements of financial statements that are common to users of both International Financial Reporting Standards (IFRS) and UK GAAP. These are often referred to as the 'front half' of the financial statements. This publication contains the guidance applicable to all UK companies regardless of the GAAP under which their financial statements are prepared. Key updates from the previous edition (Manual of Accounting: Management Reports and Governance 2011) include updated chapters on business review and corporate governance, with many more illustrations and examples. Written by PwC's UK Assurance Risk and Quality team, the manual includes practical advice based on PwC's work advising clients, partners, and staff. The book will be of particular interest to finance directors, accountants, legal practitioners, company administrators, financial advisors, and auditors.

Sergeant Steve Maharidge returned from World War II an angry man. The only evidence that he'd served in the Marines was a photograph of himself and a buddy tacked to the basement wall. On one terrifyingly memorable occasion his teenage son, Dale, witnessed Steve screaming at the photograph: "They said I killed him! But I didn't kill him! It wasn't my fault!" After Steve died, Dale Maharidge began a twelve-year quest to face down his father's wartime ghosts. He found more than two dozen members of Love Company, the Marine unit in which his father had served. Many of them, now in their eighties, finally began talking about the war. They'd never spoken so openly and emotionally, even to their families. Through them, Maharidge brilliantly re-creates Love Company's battles and the war that

followed them home. In addition, Maharidge traveled to Okinawa to experience where the man in his father's picture died and meet the families connected to his father's wartime souvenirs. The survivors Dale met on both sides of the Pacific Ocean demonstrate that wars do not end when the guns go quiet—the scars and demons remain for decades. Bringing Mulligan Home is a story of fathers and sons, war and postwar, silence and cries in the dark. Most of all it is a tribute to soldiers of all wars—past and present—and the secret burdens they, and their families, must often bear.

Living with seven brothers and her father, who thinks girls are useless, a Finnish American farm girl is determined to prove her worth when a enterprising gentleman tries to purchase their cash-strapped settlement in Washington in 1900.

When his girlfriend decides to give their baby away, seventeen-year-old Sam is determined to keep him and raise him alone.

Warning: This book contains explicit language and explosive sex. It is an adult romance and not intended for anyone under the age of 18. Liam Christianson is the devil-may-care, rhythm guitarist for Bayou Stix, the hottest rock band around. He's a playboy and likes to do things his way. No regrets. He knows that women love him, and he uses that to his advantage. He's cocky and shallow. Or so it seems. Clove Rodrigue is the baby sister of Liam's bandmate and friend. She's a sweet, fairly innocent young woman who was dealt a bad hand and became a victim of circumstance. After finishing culinary school, she returns home to Baton Rouge. She finds herself living under the same roof as Liam and they quickly realize they are like oil and water. He hates how perfect she is, and she can't stand his treatment of women. Both Liam and Clove are accustomed to letting others see only what they want them to see, each hiding behind false pretenses. What happens when polar opposites realize that their hatred of one another is really attraction? Will they succumb to the allure? What happens when the

things that you fight so hard against are the very things you need the most in the world?

With 75 percent of screen time being spent on connected devices, digital strategies have moved front and center of most marketing plans. But what if that's not enough? How often does consumer engagement actually go further than the "like" button? New York Times and USA Today Bestseller!

Scandal transcends time in the Big Easy Feisty reporter Corlis McCullough isn't afraid to push boundaries in the name of journalistic integrity.

When passion for the truth lands her in New Orleans in need of a job, an assignment at a TV station pits her against her old college nemesis, King Duvallon.

The sultry streets of the French Quarter, the glamorous Garden District, derelict riverfront cotton warehouses, and gritty back alleys come alive as the reporter's story inexplicably slips between the nineteenth century and today. A long-forgotten drama of blackmail, swindles, and a love affair that is still changing lives leaves Corlis and King wondering if their burgeoning, unholy attraction will render them pawns in a matrix of mystery and deceit. "A must read...Ware transports you to New Orleans...and captures all its charm." —Rendezvous Reviews

This is the book version of a special issue of the International Journal of High Speed Electronics and

Systems, reviewing recent work in the field of compound semiconductor integrated circuits. There are fourteen invited papers covering a wide range of applications, frequencies and materials. These papers deal with digital, analog, microwave and millimeter-wave technologies, devices and integrated circuits for wireline fiber-optic lightwave transmissions, and wireless radio-frequency microwave and millimeter-wave communications. In each case, the market is young and experiencing rapid growth for both commercial and military applications. Many new semiconductor technologies compete for these new markets, leading to an alphabet soup of semiconductor materials described in these papers. Contents: Present and Future of High-Speed Compound Semiconductor IC's (T Otsuji); Transforming MMIC (E J Martinez); Distributed Amplifier for Fiber-Optic Communication Systems (H Shigematsu et al.); Microwave GaN-Based Power Transistors on Large-Scale Silicon Wafers (S Manohar et al.); Radiation Effects in High Speed III-V Integrated Circuits (T R Weatherford); Radiation Effects in III-V Semiconductor Electronics (B D Weaver et al.); Reliability and Radiation Hardness of Compound Semiconductors (S A Kayali & A H Johnston); and other papers. Readership: Engineers, scientists and graduate students working on high speed electronics and systems, and in the area of compound semiconductor integrated circuits.

Nanomaterials Characterization Techniques, Volume Two, part of an ongoing series, offers a detailed analysis of the different types of spectroscopic methods currently being used in nanocharacterization. These include, for example, the Raman spectroscopic method for the characterization of carbon nanotubes (CNTs). This book outlines the different kinds of spectroscopic tools being used for the characterization of nanomaterials and discusses under what conditions each should be used. The book is intended to cover all the major spectroscopic techniques for nanocharacterization, making it an important resource for both the academic community at the research level and the industrial community involved in nanomanufacturing. Explores how spectroscopy and X-ray-based nanocharacterization techniques are applied in modern industry Analyzes all the major spectroscopy and X-ray-based nanocharacterization techniques, allowing the reader to choose the best for their situation Presents a method-orientated approach that explains how to successfully use each technique

Rohr's meditations on the daily readings of Lent are not for the sake of mere information, or even for academia (although the author hopes it will satisfy both), but for the sake of our transformation into our original "image and likeness," which is the very image of God. What always and finally matters for all

of us is encounter! Father Rohr begins each meditation with a single title or phrase that sums up the point. Then he offers the meditation followed by key passages from the readings. He ends each meditation with a Starter Prayer that invites you to self-disclosure and to enter the wondrous divine dialogue with clarity, insight—and holy desire! "There are two moments that matter. One is when you know that your one and only life is absolutely valuable and alive. The other is when you know your life, as presently lived, is entirely pointless and empty. You need both of them to keep you going in the right direction. Lent is about both. The first such moment gives you energy and joy by connecting you with your ultimate Source and Ground. The second gives you limits and boundaries, and a proper humility, so you keep seeking the Source and Ground and not just your small self."—From the Introduction

This book describes a comprehensive approach for synthesis and optimization of logic-in-memory computing hardware and architectures using memristive devices, which creates a firm foundation for practical applications. Readers will get familiar with a new generation of computer architectures that potentially can perform faster, as the necessity for communication between the processor and memory is surpassed. The discussion includes various synthesis methodologies and optimization algorithms targeting implementation cost metrics including

latency and area overhead as well as the reliability issue caused by short memory lifetime. Presents a comprehensive synthesis flow for the emerging field of logic-in-memory computing; Describes automated compilation of programmable logic-in-memory computer architectures; Includes several effective optimization algorithm also applicable to classical logic synthesis; Investigates unbalanced write traffic in logic-in-memory architectures and describes wear leveling approaches to alleviate it.

This book is about digital system testing and testable design. The concepts of testing and testability are treated together with digital design practices and methodologies. The book uses Verilog models and testbenches for implementing and explaining fault simulation and test generation algorithms. Extensive use of Verilog and Verilog PLI for test applications is what distinguishes this book from other test and testability books. Verilog eliminates ambiguities in test algorithms and BIST and DFT hardware architectures, and it clearly describes the architecture of the testability hardware and its test sessions. Describing many of the on-chip decompression algorithms in Verilog helps to evaluate these algorithms in terms of hardware overhead and timing, and thus feasibility of using them for System-on-Chip designs. Extensive use of testbenches and testbench development techniques is another unique feature of this book. Using PLI in

developing testbenches and virtual testers provides a powerful programming tool, interfaced with hardware described in Verilog. This mixed hardware/software environment facilitates description of complex test programs and test strategies.

Fabless (no fabrication) IC (integrated circuit) techniques are growing rapidly and promise to become the standard method of IC manufacturing in the near future, this book will provide readers with what will soon be required knowledge of the subject. Other books on IC fabrication deal with the strictly physical process aspects of the topic and assume all factors in IC fabrication are under the control of the IC designing company. By contrast, this title recognizing that fabless IC design is often as much about managing business relationships as it is about physical processes. “Fabless ICs are those designed and marketed by one company but actually manufactured by another. \*Written by board members of the Fabless Semiconductor Association, an industry consortium that include Xilinx, Intersil, Micro Linear, and many other members \*Appropriate for a wide range of integrated circuit (IC) designers and users who need to understand the fabless process and its advantages/limitations \*Discusses important topics such as negotiating with outside fabrication companies, choosing the right electronic design tools, protection of intellectual property and

### business plans, and maintaining quality control

The demand for ever smaller and portable electronic devices has driven metal oxide semiconductor-based (CMOS) technology to its physical limit with the smallest possible feature sizes. This presents various size-related problems such as high power leakage, low-reliability, and thermal effects, and is a limit on further miniaturization. To enable even smaller electronics, various nanodevices including carbon nanotube transistors, graphene transistors, tunnel transistors and memristors (collectively called post-CMOS devices) are emerging that could replace the traditional and ubiquitous silicon transistor. This book explores these nanoelectronics at the device level including modelling and design. Topics covered include high-k dielectrics; high mobility n and p channels on gallium arsenide and silicon substrates using interfacial misfit dislocation arrays; anodic metal-insulator-metal (MIM) capacitors; graphene transistors; junction and doping free transistors; nanoscale high-k/metal-gate CMOS and FinFET based logic libraries; multiple-independent-gate nanowire transistors; carbon nanotubes for efficient power delivery; timing driven buffer insertion for carbon nanotube interconnects; memristor modeling; and neuromorphic devices and circuits. This book is essential reading for researchers, research-focused industry designers/developers, and advanced students working on next-generation electronic devices and circuits.

Somewhere, behind closed doors, in her solitary world; somewhere, under the sheets with an indifferent lover; somewhere, is a woman who will not be denied... Trapped for fifteen years in the stranglehold of a dead marriage and soulless household domesticity, the beautiful, full-bodied and passionate Meera Patel depends on her memories and her flights of fancy to soothe the aches that wrack her body; to

quieten an unquenchable need. Until one cataclysmic day in Mumbai, when she finally breaks free... Bold, brazen and defiant, Sita's Curse looks at the hypocrisy of Indian society and tells the compelling story of a middle-class Indian housewife's urgent need for love, respect, acceptance – and sexual fulfilment.

When Dennis James Williams returned home after fighting in Iraq, he had a hard time fitting back into society. He was under financial stress and could not communicate with his wife. Much of his time was spent trying to find a place to work so he could provide for his family. But what turned out to be his worst problem was something he didn't want to admit he had—post-traumatic stress disorder. In this gut-wrenching personal account, Williams looks back at a downward spiral that led to alcohol, drugs, and other crutches. Finding a path that led to something better took a lot of work and time. Each time he thought he'd found the way out, he'd realize it was just an illusion. Whether you are a veteran or you know someone who is one, there are signs of post-traumatic stress disorder—you just need to know how to recognize them. After that, it's a matter of accepting the problem and seeking help. Williams met the challenge, and in PTSD and Me, he imparts that there is hope for other soldiers with this disorder.

From the author of *Fire and Fortitude*, a white-knuckle account of the 1st Infantry Division's harrowing D-Day assault on the eastern sector of Omaha Beach--acclaimed historian John C. McManus has written a gripping history that will stand as the last word on this titanic World War II battle. Nicknamed the Big Red One, 1st Division had fought from North Africa to Sicily, earning a reputation as stalwart warriors on the front lines and rabble-rousers in the rear. Yet on D-Day, these jaded combat veterans melded with fresh-faced replacements to accomplish one of the most challenging and deadly missions ever. As the men hit the beach, their equipment destroyed or washed away, soldiers cut down by the dozens, courageous heroes emerged: men such as Sergeant Raymond Strojny, who grabbed a bazooka and engaged in a death duel with a fortified German antitank gun; T/5 Joe Pinder, a former minor-league pitcher who braved enemy fire to save a vital radio; Lieutenant John Spalding, a former sportswriter, and Sergeant Phil Streczyk, a truck driver, who together demolished a German strong point overlooking Easy Red, where hundreds of Americans had landed. Along the way, McManus explores the Gap Assault Team engineers who dealt with the extensive mines and obstacles, suffering nearly a fifty percent casualty rate; highlights officers such as Brigadier General Willard Wyman and Colonel George Taylor, who led the way to victory; and punctures scores of myths

surrounding this long-misunderstood battle. *The Dead and Those About to Die* draws on a rich array of new or recently unearthed sources, including interviews with veterans. The result is history at its finest, the unforgettable story of the Big Red One's nineteen hours of hell--and their ultimate triumph--on June 6, 1944.

Symphony conductor Don Fernando longs to hear the sounds of the shofar. Like other conversos during the Spanish Inquisition, he has to hide his Jewish religion and pretend to follow the teachings of the church. But when he is asked to perform a concert celebrating the new world, he and his son Rafael devise a clever plan to usher in the Jewish New Year in plain sight of the Spanish nobility.

Ranging from the riotously comic to the nostalgic, edgy, and suspenseful, these short stories offer richly developed and engaging portraits of characters across the spectrum of life, all absorbed by the thrill of fly fishing. A marriage betrayal on a trout stream in the north woods; angler rage on the redfish flats of the Gulf of Mexico; the intensity of combat fishing on a salmon pool in the Pacific Northwest-- all rendered in sparkling prose that will resonate with every angler, and delight any reader who enjoys outdoor pastimes.
