This unique textbook explores practice-based research (PBR), using numerous practice examples to actively encourage and engage students and practitioners to embrace research as a meaningful support for their practice. Whilst evidence-based practice gives practitioners access to information about "universal" best practices, it does not prioritize practitioner-generated knowledge or promote new research-based interventions relevant to their own practice circumstances as PBR does. This book discusses the evolution of PBR as a distinct social work research approach, describes its principles and methods and presents a range of exemplars illustrating the application of PBR within different practice methods in different practice settings. The chapters cover: Identifying the research question in a PBR model Designing a study and identifying a methodology Sampling Literature reviews Gathering data Ethics Analyzing data and interpreting results Putting research into practice Viewing the practitioner as central to the research process, and research as a necessary component of practice, this invaluable book emphasizes the seamless integration of practice and research. It is about research in social work practice rather than research on social work practice. Each chapter includes an overview, an introduction, and a key concepts summary. Practice-Based Research in Social Work is a very accessible text suitable for social work students, particularly MSW students, and practitioners.

Intended as a guide for both novice and experienced researchers, this collection of articles focuses on single-subject experimental research used for investigations in literacy. The premise of the collection is that this single-subject approach allows researchers--both those from outside the classroom and teacher-researchers--to discover how an instructional intervention affects the student actually in need of assistance. The articles and their authors are: (1) "What Is Single-Subject Experimental Research?" (Sandra McCormick); (2) "Reversal Designs" (David B. Yaden, Jr.); (3) "Multiple-Baseline Designs" (James Kucera and Saul Axelrod); (4) "Alternating-Treatments Designs" (Susan B. Neuman); (5) "Statistical Analysis Procedures for Single-Subject Designs" (Michael L. Kamil); (6) "Combining Single-Subject Designs with Qualitative Research" (Tanja L. Bisesi and Taffy E. Raphael); (7) "Teachers Using Single-Subject Designs in the Classroom" (Judith A. Braithwaite); and (8) "Important Issues Related to Single-Subject Experimental Research" (Annemarie Sullivan Palincsar and Andrea DeBruin Parecki). Three appendixes conclude the collection: Appendix A--"Conventions for Displaying Data on Line Graphs" (Sandra McCormick); Appendix B--"Comparison of Research Methodologies Commonly Used in Literacy Investigations" (Sandra McCormick); and Appendix C--"Single-Subject Experimental Research Studies with Literacy-Related Themes" (Susan B. Neuman). (NKA)

The promise of better living through chemistry has not always been kept. Chemical techniques were used to produce both penicillin and dynamite, penicillin can have harmful side effects while dynamite has beneficial uses. Insecticides have helped alleviate world hunger while they have disrupted global ecosystems. Numerous petrochemicals have made life both easier and more hazardous. The Two Faces of Chemistry presents a balanced view, weighing the assets and dangers of the whole range of modern chemical compounds and their byproducts, including food additives, "natural" foods, fertilizers, pesticides, drugs and other medications, cosmetics, soaps and detergents, plastics, artificial rubber,

fluorocarbons, and leaded gasoline. Caglioti, an organic chemist who has written widely in the popular press, not only makes all this material clear and understandable to readers without technical background but also captures the drama that accompanied the development of new products and the revelation, often years later, that they could lead to devastating results. In each case - for example, in his accounts of "the saccharin mess" and "the Pill" - he carefully sifts through all the accumulated layers of controversy in order to arrive at an unbiased evaluation and assessment of risk. The book's coverage is worldwide, but most of the data is taken from those countries that use chemicals intensively: the United States, Western Europe, and Japan. The writer and chemist Primo Levi, states in his Foreword that "underneath the statistics and technical data, which with good reason are plentiful, there flows through this book a silent current of wisdom, educational intent, and morality. While it does not attempt to dictate solutions, by its very character it teaches us how best to go about finding them." Luciano Caglioti is Professor of Organic Chemistry at the University of Rome.
