The second edition of the Impact Evaluation in Practice handbook is a comprehensive and accessible introduction to impact evaluation for policy makers and development practitioners. First published in 2011, it has been used widely across the development and academic communities. The book incorporates real-world examples to present practical guidelines for designing and implementing impact evaluations. Readers will gain an understanding of impact evaluations and the best ways to use them to design evidence-based policies and programs. The updated version covers the newest techniques for evaluating programs and includes state-of-the-art implementation advice, as well as an expanded set of examples and case studies that draw on recent development challenges. It also includes new material on research ethics and partnerships to conduct impact evaluation. The handbook is divided into four sections: Part One discusses what to evaluate and why; Part Two presents the main impact evaluation methods; Part Three addresses how to manage impact evaluations; Part Four reviews impact evaluation sampling and data collection. Case studies illustrate different applications of impact evaluations. The book links to complementary instructional material available online, including an applied case as well as questions and answers. The updated second edition will be a valuable resource for the international development community, universities, and policy makers looking to build better evidence around what works in development.

Published to glowing praise in 1990, Science for All Americans defined the science-literate American--describing the knowledge, skills, and attitudes all students should retain from their learning experience--and offered a series of recommendations for reforming our system of education in science, mathematics, and technology. Benchmarks for Science Literacy takes this one step further. Created in close consultation with a cross-section of American teachers, administrators, and scientists, Benchmarks elaborates on the recommendations to provide guidelines for what all students should know and be able to do in science, mathematics, and technology by the end of grades 2, 5, 8, and 12. These grade levels offer reasonable checkpoints for student progress toward science literacy, but do not suggest a rigid formula for teaching. Benchmarks is not a proposed curriculum, nor is it a plan for one: it is a tool educators can use as they design curricula that fit their student's needs and meet the goals first outlined in Science for All Americans. Far from pressing for a single educational program, Project 2061 advocates a reform strategy that will lead to more curriculum diversity than is common today. IBenchmarks emerged from the work of six diverse school-district teams who were asked to rethink the K-12 curriculum and outline alternative ways of achieving science literacy for all students. These teams based their work on published research and the continuing advice of prominent educators, as well as their own teaching experience. Focusing on the understanding and interconnection of key concepts rather than rote memorization of terms and isolated facts, Benchmarks advocates building a lasting understanding of science and related fields. In a culture increasingly pervaded by science, mathematics, and technology, science literacy require habits of mind that will enable citizens to understand the world around them, make some sense of new technologies as they emerge and grow, and deal sensibly with problems that involve evidence, numbers, patterns, logical arguments, and technology--as well as the relationship of these disciplines to the arts, humanities, and vocational sciences--making science literacy relevant to all students, regardless of their career paths. If Americans are to participate in a world shaped by modern science and mathematics, a world where technological know-how will offer the keys to economic and political stability in the twenty-first century, education in these areas must become one of the nation's highest priorities. Together with Science for All Americans, Benchmarks for Science Literacy offers a bold new agenda for the future of science education in this country, one that is certain to prepare our children for life in the twenty-first century.

In keeping with the spirit of the first edition, Teaching ESL Composition: Purpose, Process, and Practice, Second Edition presents pedagogical approaches to the teaching of ESL composition in the framework of current theoretical perspectives on second language writing processes, practices, and writers. The text as a whole moves from general themes to specific pedagogical concerns. A primary goal is to offer a synthesis of theory and practice in a rapidly evolving community of scholars and professionals. The focus is on providing apprentice teachers with practice activities that can be used to develop the complex skills involved in teaching second language writing. Although all topics are firmly grounded in reviews of relevant research, a distinguishing feature of this text is its array of hands-on, practical examples, materials, and tasks, which are presented in figures and in the main text. The synthesis of theory and research in a form that is accessible to preservice and in-service teachers enables readers to see the relevance of the field's knowledge base to their own present or future classroom settings and student writers. Each chapter includes: *Questions for Reflection--pre-reading questions that invite readers to consider their own prior experiences as students and writers and to anticipate how these insights might inform their own teaching practice; *Reflection and Review--follow-up questions that ask readers to examine and evaluate the theoretical information and practical suggestions provided in the main discussion; and *Application Activities--a range of hands-on practical exercises, such as evaluating and synthesizing published research, developing lesson plans, designing classroom activities, executing classroom tasks, writing commentary on sample student papers, and assessing student writing. The dual emphasis on theory and practice makes this text appropriate as a primary or supplementary text in courses focusing on second language writing theory, as well as practicum courses that emphasize or include second language writing instruction or literacy instruction more generally. New in the Second Edition: *updated research summaries consider new work that has appeared since publication of the first edition; *revised chapter on research and practice in the use of computers in second language writing courses covers recent developments; *streamlined number and type of Application Activities focus on hands-on practice exercises and critical analysis of primary research; and *revisions throughout reflect the authors' own experiences with the text and reviewers' suggestions for improving the text.

This supplementary ebook contains the 12 chapters from the first edition of Brain Tomlinson's comprehensive Developing Materials for Language Teaching on various aspects of materials development for language teaching that did not, for reasons of space, appear in the second edition.

Drawing upon experiences at state and local level project evaluation, and based on current research in the professional literature, Payne presents a practical, systematic, and flexible approach to educational evaluations. Evaluators at all levels -- state, local and classroom -- will find ideas useful in conducting, managing, and using evaluations. Special user targets identified are state department of education personnel and local school system administrative personnel. The volume can be used by those doing evaluation projects 'in the field', or as a text for graduate courses at an introductory level. The book begins with an overview of the generic evaluation process. Chapter Two is devoted to the criteria for judging the effectiveness of evaluation practice. Chapter Three addresses the all important topic of evaluation goals and objectives. Chapters Four, Five and Six basically are concerned with the approach, framework, or design of an evaluation study. Chapter Four contains a discussion of four major philosophical frameworks or metaphors and the implications of these frameworks for conducting an evaluation. Chapters Five and Six describe predominantly quantitative and qualitative designs, respectively. Design, implementation and operational issues related to instrumentation (Chapter Seven), management and decision making (Chapter Eight), and reporting and utilization of results (Chapter Nine) are next addressed. The final chapter of the book (Chapter Ten) considers the evaluation of educational products and materials.

Master's Thesis from the year 2020 in the subject Didactics - English - Miscellaneous, grade: 1,0, University of Duisburg-Essen (Department of Anglophone Studies), language: English, abstract: In contrast to the reality outside of school, textbooks, especially in the context of teaching English as a foreign language (TEFL), are still the most important medium for language learning purposes today. However, the academic evaluation of textbooks is surprisingly a rather neglected field of study. Also, the very few studies that evaluate an EFL-textbook mostly only consider the technical dimension of analysis, such as the theoretical perspective of EFL methodology. Yet, to gain a more holistic impression of a textbook, one should also include the practical perspective of EFL teachers. Therefore, the present case study critically evaluates one exemplary textbook combining the theoretical perspective of EFL didactics and the practical perspective of EFL teachers. The TEFL textbook chosen for this case study is titled "English G21 A5" published by Cornelsen in 2010. It is designed for grade 9 at Gymnasium in Germany. Taking Unit 1 of this textbook as an example, this paper aims at examining the potential of this textbook for EFL learning and teaching. The central question is whether the textbook meets the various requirements posed to a textbook including the numerous principles that are part of contemporary EFL methodology and central educational standards. In the first part of the analysis (chapter 4) the question is in how far the textbook meets the theoretical requirements of TEFL. For the second part of the analysis (chapter 5) a small survey was carried out conducting qualitative interviews with four different teachers. Employing qualitative content analysis, the survey intends to find out about the teachers' opinion on the textbook focusing on the question, how the teachers assess the value of the textbook for their teaching practice. Prior to the analysis it is, however, necessary to elaborate on some theoretical background (chapter 2). This involves describing the main paradigms of contemporary EFL methodology as well as illustrating relevant theoretical context in relation to the term textbook and textbook evaluation revealing central requirements EFL textbooks need to fulfil. The aim of this twofold description is to develop a list of criteria (section 2.2.4) that will be used as the foundation of the textbook evaluation. The selected textbook will be introduced in more detail in chapter 3.

Effective science teaching requires creativity, imagination, and innovation. In light of concerns about American science literacy, scientists and educators have struggled to teach this discipline more effectively. *Science Teaching Reconsidered* provides undergraduate science educators with a path to understanding students, accommodating their individual differences, and helping them grasp the methods--and the wonder--of science. What impact does teaching style have? How do I plan a course curriculum? How do I make lectures, classes, and laboratories more effective? How can I tell what students are thinking? Why don't they understand? This handbook provides productive approaches to these and other questions. Written by scientists who are also educators, the handbook offers suggestions for having a greater impact in the classroom and provides resources for further research.

"Touchstone is an innovative four-level series for adults and young adults, taking students from beginning to intermediate levels (CEFR: A1-B2). Based on research into the Cambridge English Corpus, Touchstone teaches English as it is really used. It presents natural language in authentic contexts, and explicitly develops conversation strategies so learners speak with fluency and confidence."--Page 4 of cover.

English language teaching textbooks (or coursebooks, as they are sometimes known) play a central role in the life of a classroom and in many contexts constitute the syllabus the teacher is expected to follow. However, there is a need to extend and strengthen research in this area. Following a substantial state-of-the-art survey of research on ELT textbooks and a discussion of appropriate methods to study them, this volume contains chapters focusing on: 1. analysis of textbook content; 2. how textbooks are used in the English language classroom, and 3. textbook writers' accounts of the materials writing, design, and publishing process. Written by an international cast of teachers and textbook writers working in the UK, the USA, Japan, Spain, New

Zealand, and Saudi Arabia, this volume features a balance of theory and practice and refers to both general English and English for Academic Purposes (EAP) textbooks used around the world.

This book identifies the many facets of culture that influence second language learners and teachers. The paperback edition identifies the many facets of culture that influence second language learners and teachers. It addresses the impact of culture on learning to interact, speak, construct meaning, and write in a second language, while staying within the sociocultural paradigms specific to a particular language and its speakers. By providing a comprehensive introduction to research from other disciplines on the interaction between language and culture, this volume offers an important contribution to the field of second language acquisition.

In *Issues in Coursebook Evaluation*, Azarnoosh, Zeraatpishe, Faravani and Kargozari (Eds.) take a theory to practice approach in investigating basic topics in evaluating English language textbooks. In each case, theoretical foundations, specific evaluation criteria, and practical examples are presented.

This comparative study provides an overview of the textbook production chain, starting with its origins in the curriculum, and suggests ways in which policymakers can make improvements at every point in the chain. With evidence from a range of countries, mainly in Asia, the study is intended as a resource for policymakers and as a reference and benchmark for education systems. Although the study focuses on textbooks, which are the priority for governments and teachers and represent the greatest item of expenditure on teaching and learning materials, it also includes other teaching and learning materials including digital resources.

Written in easy-to-understand language, this important text provides a systematic and commonsense approach to developing instruments for data collection and analysis. This book can be used by both those who are developing instruments for the first time and those who want to hone their skills, including students, agency personnel, program managers, and researchers. This book provides a thorough presentation of instrument construction, from conception to development and pre-testing of items, formatting the instrument, administration, and, finally, data management and presentation of the findings.

Throughout the book, the authors emphasize how to create an instrument that will produce trustworthy and accurate data. To that end they have included guidelines for reviewing and revising the questionnaire to enhance validity and reliability. They also show how to work effectively with stakeholders such as instrument designers, decision-makers, agency personnel, clients, and raters or respondents.

This is an attempt to redraw the boundaries of foreign language study. It focuses attention not just on cultural knowledge as a necessary aspect of communicative competence, but as an educational objective in its own right, as an end as well as a means of language learning. ELT Textbooks and Materials Problems in Evaluation and Development Research for Materials Development in Language Learning Evidence For Best Practice Bloomsbury Publishing

"Provides an overview of the current state of materials design in language teaching. The materials discussed include the complete range of language-learning resources from teacher-created materials to commercially-developed tasks, texts, and activities. Seventeen original chapters explore the issues involved in the design, implementation, and evaluation of materials in a wide variety of contexts. The contributors, an international group of established experts, explain the theories and principles underlying their approaches to materials design. They examine the issues that materials writers encounter when developing language-teaching materials, both in print and digital formats, and present a variety of solutions that help resolve those issues. Economic, academic, and social forces are causing undergraduate schools to start a fresh examination of teaching effectiveness. Administrators face the complex task of developing equitable, predictable ways to evaluate, encourage, and reward good teaching in science, math, engineering, and technology. *Evaluating, and Improving Undergraduate Teaching in Science, Technology, Engineering, and Mathematics* offers a vision for systematic evaluation of teaching practices and academic programs, with recommendations to the various stakeholders in higher education about how to achieve change. What is good undergraduate teaching? This book discusses how to evaluate undergraduate teaching of science, mathematics, engineering, and technology and what characterizes effective teaching in these fields. Why has it been difficult for colleges and universities to address the question of teaching effectiveness? The committee explores the implications of differences between the research and teaching cultures--and how practices in rewarding researchers could be transferred to the teaching enterprise. How should administrators approach the evaluation of individual faculty members? And how should evaluation results be used? The committee discusses methodologies, offers practical guidelines, and points out pitfalls. *Evaluating, and Improving Undergraduate Teaching in Science, Technology, Engineering, and Mathematics* provides a blueprint for institutions ready to build effective evaluation programs for teaching in science fields.

English for Specific Purposes offers the teacher a new perspective on this important field. The main concern is effective learning and how this can best be achieved in ESP courses. The authors discuss the evolution of ESP and its position today; the role of the ESP teacher; course design; syllabuses; materials; teaching methods, and evaluation procedures. It will be of interest to all teachers who are concerned with ESP. Those who are new to the field will find it a thorough, practical introduction while those with more extensive experience will find its approach both stimulating and innovative.

Materials Development in Language Teaching aims to help readers apply current theoretical principles and research findings to the practical realities of developing and exploiting classroom materials. The authors also suggest new ideas and directions in materials development, which readers can pursue for themselves. This book is accessible to readers with little previous experience in the field, and is essential reading for all those involved in developing materials for language teaching. In the second edition of this highly popular title, each chapter has been comprehensively revised and updated to take into account both recent research and the significant technological developments since the first edition was published in 1998. Two new chapters

have been added to assess the potential of electronic media for materials development. These chapters include an overview of the technologies available, as well as individual case studies and activities.

The best decisions made by public managers are based not on instinct, but on an informed understanding of what's happening on the ground. Policy may be directed by ideology, but it must also be founded on reality. The challenge of making the right decisions as a public manager is often, therefore, based on the need for rigorous, actionable research. Now in a thoughtfully revised second edition, this textbook shows students of Public Administration exactly how to use both qualitative and quantitative research techniques to give them the best chance to make the right decisions. Uniquely, Eller, Gerber, and Robinson present research methodologies through a series of real-life case studies, with each chapter exploring situations where a public manager can use research to answer specific questions, demonstrating how that research can inform future policy. Taking readers through the key concepts, from research design and sampling to interviews, survey data, and more statistical-based approaches, this new edition provides a complete guide to using research in the public and voluntary sectors. New to this edition: To better orient the student, the second edition is thematically arranged. Five sections, each with a short essay, provide not only previews of the content of each section, but more importantly guide the reader through how the concepts and techniques covered relate to real-world use and application. A new chapter on applied quantitative analyses has been added to offer coverage of several commonly-used and valuable analytic techniques for decision making for policy and management: benefit-cost analysis, risk assessment, and forecasting. The second edition is accompanied by online materials containing suggested course plans and sample syllabi, PowerPoint lecture slides, and student support materials to illustrate the application of key concepts and analytic techniques. Each chapter also includes discussion questions, class exercises, end of chapter review questions, and key vocabulary to provide students with a range of further tools to apply research principles to practical situations.

This book examines current research in materials development and discussing their implications for the learning and teaching of languages.

Whether the concept being studied is job satisfaction, self-efficacy, or student motivation, values and attitudes--affective characteristics--provide crucial keys to how individuals think, learn, and behave. And not surprisingly, as measurement of these traits gains importance in the academic and corporate worlds, there is an ongoing need for valid, scientifically sound instruments. For those involved in creating self-report measures, the completely updated Third Edition of Instrument Development in the Affective Domain balances the art and science of instrument development and evaluation, covering both its conceptual and technical aspects. The book is written to be accessible with the minimum of statistical background, and reviews affective constructs from a measurement standpoint. Examples are drawn from academic and business settings for insights into

design as well as the relevance of affective measures to educational and corporate testing. This systematic analysis of all phases of the design process includes: Measurement, scaling, and item-writing techniques. Validity issues: collecting evidence based on instrument content. Testing the internal structure of an instrument: exploratory and confirmatory factor analyses. Measurement invariance and other advanced methods for examining internal structure. Strengthening the validity argument: relationships to external variables. Addressing reliability issues. As a graduate course between covers and an invaluable professional tool, the Third Edition of *Instrument Design in the Affective Domain* will be hailed as a bedrock resource by researchers and students in psychology, education, and the social sciences, as well as human resource professionals in the corporate world. Education is a hot topic. From the stage of presidential debates to tonight's dinner table, it is an issue that most Americans are deeply concerned about. While there are many strategies for improving the educational process, we need a way to find out what works and what doesn't work as well. Educational assessment seeks to determine just how well students are learning and is an integral part of our quest for improved education. The nation is pinning greater expectations on educational assessment than ever before. We look to these assessment tools when documenting whether students and institutions are truly meeting education goals. But we must stop and ask a crucial question: What kind of assessment is most effective? At a time when traditional testing is subject to increasing criticism, research suggests that new, exciting approaches to assessment may be on the horizon. Advances in the sciences of how people learn and how to measure such learning offer the hope of developing new kinds of assessments—assessments that help students succeed in school by making as clear as possible the nature of their accomplishments and the progress of their learning. *Knowing What Students Know* essentially explains how expanding knowledge in the scientific fields of human learning and educational measurement can form the foundations of an improved approach to assessment. These advances suggest ways that the targets of assessment—what students know and how well they know it—as well as the methods used to make inferences about student learning can be made more valid and instructionally useful. Principles for designing and using these new kinds of assessments are presented, and examples are used to illustrate the principles. Implications for policy, practice, and research are also explored. With the promise of a productive research-based approach to assessment of student learning, *Knowing What Students Know* will be important to education administrators, assessment designers, teachers and teacher educators, and education advocates.
