This online companion enhances understanding of anatomy and positioning by providing a well-developed range of media-rich assets, such as narrated animations and interactive activities and exercises. Used in conjunction with the Textbook of Radiographic Positioning & Related Anatomy, 6th Edition, the online companion offers greater learning opportunities than just the text and workbooks offer, while accommodating diverse learning styles and circumstances. Course management tools provide student and instructor communications options and administrative tools such as real-time chat, class calendar, e-mail connections, bulletin board, digital drop box, discussion boards,

instructor syllabus, and grade book. Available on Evolve, Blackboard, and WebCT. Animations/slide shows with audio narration demonstrate positioning procedures, communicating difficult concepts far better than static illustrations. Case studies, film evaluations, and a variety of interactive exercises include matching, multiple choice with rationales, labeling, and short answer, to reinforce learning and keep the student involved with the program, thus encouraging more study. Anatomy review provides an assigned reading from the text followed by a series of self-assessment labeling exercises, challenging the student's knowledge and determining readiness to proceed in the module. Special situations cover the unique situations frequently encountered in the clinical environment, and include narrated animations, slide shows, and clinical situations requiring a student response. These describe both routine and special projections needed to expertly demonstrate specific types of trauma or pathology. Film evaluations show positioning and/or technical errors, presented with questions to be answered online by students along with a discussion board related to the radiographs, promoting critical thinking and interactive learning and "linking" the class in online environment. Learning Links direct students to related sites on the Internet and pose related questions, providing students with additional learning resources. Capstone module summarizes information presented in the previous modules, providing a series of interactive case scenarios involving multiple regions of the body for the student to assess, evaluate, and solve. An excellent review tool, the Capstone module emphasizes the problem-solving feature of the program. Pre- and post-testing includes a self-assessment quiz for students to evaluate their own learning needs before taking the exam. The exam is automatically scored and reported to the instructor's gradebook. Eight new modules are added, so that all areas of the body are covered. Reading assignments are adjusted to reflect content in the new edition of the core text.

This money saving package includes Bontrager: Textbook of Radiographic Positioning and Related Anatomy, 8e, Bontrager: Radiographic Positioning and Related Anatomy Workbook and Lab Manual, 8e 2 Volume Set, and Bontrager: Mosby's Radiography Online: Anatomy and Positioning for Textbook of Radiographic Positioning and Related Anatomy, 8e.

Master radiographic positioning with this comprehensive, user-friendly text. Focusing on one projection per page, Bontrager's Textbook of Radiographic Positioning and Related Anatomy, 9th Edition includes all of the positioning and projection information you need to know in a clear, bulleted format. Positioning photos, radiographic images, and radiographic overlays, presented side-by-side with the explanation of each procedure, show you how to visualize anatomy and produce the most accurate images. Updated to reflect the latest ARRT competencies and ASRT curriculum guidelines, it features more than 200 of the most commonly requested projections to prepare you for clinical practice. Labeled radiographs (radiographic overlays) identify key radiographic anatomy and landmarks to help you recognize anatomy and determine if you have captured the correct diagnostic information on your images. Positioning chapters, organized with one projection per page, present a manageable amount of information in an easily accessible format. Unique page layout with positioning photos, radiographic images, and radiographic overlays presented side-by-side with the text explanation of each procedure to facilitate comprehension and retention. Pathologic Indications list and define the pathologies most likely to be encountered during procedures covered in each chapter to help you understand the whole patient and improve your ability to produce radiographs that make diagnosis easy for the physician. Pathology Demonstrated sections explain why a particular projection is needed, or what pathology might be demonstrated, to give you a larger frame of reference and a better understanding of the reasoning behind each projection. Radiographic Criteria on positioning pages provide standards for evaluating the quality of each radiograph, helping you develop a routine for evaluating radiographic quality. Pediatric Applications prepare students for clinical success — and prepare technologists to deal competently with the special needs of their pediatric patients. Geriatric Applications include general information on positioning techniques and patient handling for geriatric patients, fostering an understanding of the challenges these patients present to the technologist. Critique Radiographs demonstrate positioning errors and help you avoid similar errors in clinicals. This text is characterized by a clear, easy-to-follow organization that features one projection per page. Positioning and projection information is presented in easy-to-read bulleted format on the left side of the page, and positioning photos, radiographic images and anatomical drawings are aligned on the right. This "show and tell" style helps students better visualize anatomy and understand positioning. An extensive survey in the US and Canada helps determine which projections are included for students to master so that they gain the most practical and up-to-date preparation possible. The WB/LM features situational questions on positioning & anatomy with illustrations, film critique questions, laboratory activities and self-evaluation tests. Chapter competencies will replace chapter objectives in the WB/LM. These competencies are similar to objectives but are formatted as a set of tasks that the student should be able to perform after working through the chapter. Information on pathology now included in the text is also found in the WB/LM.
