"Young Elizabeth Balcombe, or Betsy to friends and family, found life on the remote island of St Helena intolerably dull. Most fourteen-year-olds would. Her father had been posted to that unforgiving station in the Atlantic and, being a family man, he took his family with him. Life was bleak in Balcombe's bungalow on the fringe of James Town. But then, in October 1815, the situation was transformed by the arrival of an unusual visitor. Napoleon Bonaparte, one-time master of Europe, now prisoner and exile, stepped ashore. The Balcombes, like all the islanders, were amazed. And even more so when Napoleon, taking a fancy to their bungalow (the Briars) moved in with them. Betsy, overcoming her surprise at sharing her home with an emperor, delighted in his company and the two became firm friends. Miss Betsy Balcombe made the most of her time with the world's most famous prisoner, keenly observing all around her, noting down conversations, recording moods. The result is a unique set of memoirs which records in astonishing detail an almost unbelievable story. That of how a precocious teenager and an emperor talked, argued, played, confided and teased their way through grim years of exile on the barren rock of St Helena."-Print ed.

How ancient is father care of human infants and young children, and why did it emerge? Is it possible that father care arose among the ancestors of modern humans and became essential for survival? Or is it a recent, though variable, development? Is father care an evolved trait of *Homo sapiens* or is it a learned cultural behavior transmitted across generations in some societies but not others? In this important study, Frank L'Engle Williams examines the anthropological record for evidence of the social behaviors associated with paternity, suggesting that ample evidence exists for the importance of such behaviors for infant survival. Focusing on the first three postnatal years, he considers the implications of father care—both in the fossil record and in more recent cross-cultural research—for the development of such distinctively human traits as bipedalism, extensive brain growth, language, and socialization. He also reviews the rituals by which many human societies construct and reinforce the meanings of socially recognized fatherhood. Father care was adaptive within the context of the parental pair bond and shaped how infants developed socially and biologically. The initial imprinting of socially recognized fathers during the first few postnatal years may have sustained culturally sanctioned indirect care such as provisioning and protection of dependents for nearly two decades thereafter. In modern humans, this three-year window is critical to father-child bonding. By increasing the survival of children in the past, present, and quite possibly the future, father care may be a driving force in the biological and cultural evolution of *Homo sapiens*.

veteran psychoanalyst Erica Komisar explains why a mother's emotional and physical presence in her child's life--especially during the first three years--gives the child a greater chance of growing up emotionally healthy, happy, secure, and resilient. In other words, when it comes to connecting with your baby or toddler, more is more.

Compassionate and balanced, and focusing on the emotional health of children and moms alike, this book shows parents how to give their little ones the best chance for developing into healthy and loving adults. Based on more than two decades of clinical work, established psychoanalytic theory, and the most cutting-edge neurobiological research on caregiving, attachment, and brain development, *Being There* explains:

- How to establish emotional connection with a newborn or young child--regardless of whether you're able to work part-time or stay home
- How to ease transitions to minimize stress for your baby or toddler
- How to select and train quality childcare
- What's true and false about widely held beliefs like "I'm not good with babies" and "I'll make up for it when he's older"
- How to recognize and combat feelings of postpartum depression or boredom
- Why three months of maternity leave is not long enough--and how parents can take control of their choices to provide for their family's emotional needs in the first three years

*Being a new mom isn't easy. But with support, emotional awareness, and coping skills, it can be the most magical—and essential—work we'll ever do.*

In their first three years of life, babies face the most complex learning endeavor they will ever undertake as human beings: They learn to talk. Now, as researchers make new forays into the mystery of the development of the human brain, Golinkoff and Hirsh-Pasek, both developmental psychologists and language experts, offer parents a powerfully insightful guidebook to how infants—even while in the womb—begin to learn language. Along the way, the authors provide parents with the latest scientific findings, developmental milestones, and important advice on how to create the most effective learning environments for their children. This book takes readers on a fascinating, vitally important exploration of the dance between nature and nurture, and explains how parents can help their children learn more successfully.

In this iconic memoir of his early days, Barack Obama “guides us straight to the intersection of the most serious questions of identity, class, and race” (*The Washington Post Book World*). “Quite extraordinary.”—Toni Morrison

In this lyrical, unsentimental, and compelling memoir, the son of a black African father and a white American mother searches for a workable meaning to his life as a black American. It begins in New York, where Barack Obama learns that his father—a figure he knows more as a myth than as a man—has been killed in a car accident. This sudden death inspires an emotional odyssey—first to a small town in Kansas, from which he retraces the migration of his mother's family to Hawaii, and then to Kenya, where he meets the African side of his family, confronts the bitter truth of his father's life, and

at last reconciles his divided inheritance. Praise for *Dreams from My Father* “Beautifully crafted . . . moving and candid . . . This book belongs on the shelf beside works like James McBride’s *The Color of Water* and Gregory Howard Williams’s *Life on the Color Line* as a tale of living astride America’s racial categories.”—Scott Turow “Provocative . . . Persuasively describes the phenomenon of belonging to two different worlds, and thus belonging to neither.”—The New York Times Book Review “Obama’s writing is incisive yet forgiving. This is a book worth savoring.”—Alex Kotlowitz, author of *There Are No Children Here* “One of the most powerful books of self-discovery I’ve ever read, all the more so for its illuminating insights into the problems not only of race, class, and color, but of culture and ethnicity. It is also beautifully written, skillfully layered, and paced like a good novel.”—Charlayne Hunter-Gault, author of *In My Place* “*Dreams from My Father* is an exquisite, sensitive study of this wonderful young author’s journey into adulthood, his search for community and his place in it, his quest for an understanding of his roots, and his discovery of the poetry of human life. Perceptive and wise, this book will tell you something about yourself whether you are black or white.”—Marian Wright Edelman

Recommends practices conducive to educational development at each stage of the child's physical, cognitive, and social growth

Most parents today have accepted the message that the first three years of a baby's life determine whether or not the child will grow into a successful, thinking person. But is this powerful warning true? Do all the doors shut if baby's brain doesn't get just the right amount of stimulation during the first three years of life? Have discoveries from the new brain science really proved that parents are wholly responsible for their child's intellectual successes and failures alike? Are parents losing the "brain wars"? No, argues national expert John Bruer. In *The Myth of the First Three Years* he offers parents new hope by debunking our most popular beliefs about the all-or-nothing effects of early experience on a child's brain and development. Challenging the prevailing myth -- heralded by the national media, Head Start, and the White House -- that the most crucial brain development occurs between birth and age three, Bruer explains why relying on the zero to three standard threatens a child's mental and emotional well-being far more than missing a few sessions of toddler gymnastics. Too many parents, educators, and government funding agencies, he says, see these years as our main opportunity to shape a child's future. Bruer agrees that valid scientific studies do support the existence of critical periods in brain development, but he painstakingly shows that these same brain studies prove that learning and cognitive development occur throughout childhood and, indeed, one's entire life. Making hard science comprehensible for all readers, Bruer marshals the neurological and psychological evidence to show that children and adults have been hardwired for lifelong learning. Parents have been sold a bill of goods that is highly destructive because it overemphasizes infant and toddler nurturing to the detriment of long-term parental and educational responsibilities. The

Myth of the First Three Years is a bold and controversial book because it urges parents and decision-makers alike to consider and debate for themselves the evidence for lifelong learning opportunities. But more than anything, this book spreads a message of hope: while there are no quick fixes, conscientious parents and committed educators can make a difference in every child's life, from infancy through childhood, and beyond.

In this book the author traces the way that early psychic development from birth up to three years is reflected throughout our lifespan, including adulthood, couplehood and parenthood. The inner child reverberating within us (consciously and unconsciously) and thus present in our ongoing interactions with others, often colours and guides our current experiences, whether with our life partner or children, and as psychotherapists, with our patients. Our openness to its resonance allows us to become more attuned to and emotionally accessible to ourselves and others. The author's primary aim is to familiarize the reader with her innovative idea of the emotional immune system managed by a healthy narcissism and operating via the inner reverberations of hidden childhood narratives. Our sense of familiar self is

Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

survived for half a millennium by hunting whales with bamboo harpoons and handmade wooden boats powered by sails of woven palm fronds. But now, under assault from the rapacious forces of the modern era and a global economy, their way of life teeters on the brink of collapse. Award-winning journalist Doug Bock Clark, one of a handful of Westerners who speak the Lamaleran language, lived with the tribe across three years, and he brings their world and their people to vivid life in this gripping story of a vanishing culture. Jon, an orphaned apprentice whaler, toils to earn his harpoon and provide for his ailing grandparents, while Ika, his indomitable younger sister, is eager to forge a life unconstrained by tradition, and to realize a star-crossed love. Frans, an aging shaman, tries to unite the tribe in order to undo a deadly curse. And Ignatius, a legendary harpooner entering retirement, labors to hand down the Ways of the Ancestors to his son, Ben, who would secretly rather become a DJ in the distant tourist mecca of Bali. Deeply empathetic and richly reported, *The Last Whalers* is a riveting, powerful chronicle of the collision between one of the planet's dwindling indigenous peoples and the irresistible enticements and upheavals of a rapidly transforming world.

How we raise young children is one of today's most highly personalized and sharply politicized issues, in part because each of us can claim some level of "expertise." The debate has intensified as discoveries about our development-in the

womb and in the first months and years-have reached the popular media. How can we use our burgeoning knowledge to assure the well-being of all young children, for their own sake as well as for the sake of our nation? Drawing from new findings, this book presents important conclusions about nature-versus-nurture, the impact of being born into a working family, the effect of politics on programs for children, the costs and benefits of intervention, and other issues. The committee issues a series of challenges to decision makers regarding the quality of child care, issues of racial and ethnic diversity, the integration of children's cognitive and emotional development, and more. Authoritative yet accessible, *From Neurons to Neighborhoods* presents the evidence about "brain wiring" and how kids learn to speak, think, and regulate their behavior. It examines the effect of the climate-family, child care, community-within which the child grows. Most children learn to read, irrespective of the method of instruction. Yet up to a fifth of children struggle with reading in their first few years at school. Unfortunately, those who struggle in the early years will continue to struggle throughout their school career. Yola Center offers a systematic, research-based guide to teaching reading in the first three years of school. Her aim is to ensure that teachers can work with at-risk or reluctant readers in the regular classroom as effectively as with children for whom reading seems to come naturally. Taking an analytic approach to reading, *Beginning Reading* shows how children can be moved through the key stages of early reading acquisition. Each chapter includes an overview of relevant research, practical classroom strategies and guidelines for lesson planning. Center adopts a balanced view of reading instruction, stressing the importance of phonological processes at the beginning of literacy instruction, as well as semantic and syntactic ones. This supports at risk children in regular classrooms, who are provided with the maximum opportunity to develop the accurate and fluent word recognition skills that are needed in order to extract meaning from print. 'At last! A book that combines an overview of recent research findings and their implications for the teaching of reading with sensible and practical suggestions for classroom teachers.' Morag Stuart, Professor in the Psychology of Reading, University of London 'This is an excellent book. It comprehensively reviews the research literature and shows how to apply it to the nuts and bolts of teaching reading in the first few years of school. It is a must-read for teachers.' Professor Tom Nicholson, University of Auckland, New Zealand 'This is the book that we have all been waiting for. It is the only book that I have seen that focuses on a theoretically sound approach to the teaching of reading with a focus on children who experience difficulties in the regular classroom.' Ruth Fielding-Barnsley, Queensland University of Technology 'It is indeed rare when a reading scientist can explain the intricacies of reading development, reading difficulties, and reading instruction with such clarity and comprehensiveness. Most importantly, Dr Center provides a masterful synthesis of the most current converging scientific evidence available that defines what research-based reading instruction is all about.' G. This book seeks to debunk the idea that all troubling behaviors arising in early childhood will simply "pass with time," asserting instead that every effort should be made to diagnosis and treat truly abnormal issues early in life, while the baby's brain is still flexible and malleable. The children whose brains are exercised in those first months and years of life have stronger brains. The children whose brains are exercised have larger vocabularies, learn to read more easily, and have a much higher likelihood of staying in school and staying out of jail. Brain exercise is easy to do. Talking to a child exercises the brain. Reading to a child exercises the brain. Singing to a child helps create important connections in each child's brain.
