The U.S. government supports programs to combat global HIV/AIDS through an initiative that is known as the President's Emergency Plan for AIDS Relief (PEPFAR). This initiative was originally authorized in the U.S. Leadership Against HIV/AIDS, Tuberculosis, and Malaria Act of 2003 and focused on an emergency response to the HIV/AIDS pandemic to deliver lifesaving care and treatment in low- and middle-income countries (LMICs) with the highest burdens of disease. It was subsequently reauthorized in the Tom Lantos and Henry J. Hyde U.S. Global Leadership Against HIV/AIDS, Tuberculosis, and Malaria Reauthorization Act of 2008 (the Lantos-Hyde Act). Evaluation of PEPFAR makes recommendations for improving the U.S. government's bilateral programs as part of the U.S. response to global HIV/AIDS. The overall aim of this evaluation is a forward-looking approach to track and anticipate the

evolution of the U.S. response to global HIV to be positioned to inform the ability of the U.S. government to address key issues under consideration at the time of the report release.

This open access book provides a comprehensive overview of the health inequities and human rights issues faced by sex workers globally across diverse contexts, and outlines evidence-based strategies and best practices. Sex workers face severe health and social inequities, largely as the result of structural factors including punitive and criminalized legal environments, stigma, and social and economic exclusion and marginalization. Although previous work has largely emphasized an elevated burden and gaps in HIV and sexually transmitted infection (STI) services in sex work, less attention has been paid to the broader health and human rights concerns faced by sex workers. This contributed volume addresses this gap. The chapters feature a variety of perspectives including academic, community, implementing partners, and government to synthesize research evidence as well as lessons learned from local-level experiences across different regions, and are organized under three parts: Burden of health and human rights inequities faced by sex workers globally, including infectious diseases (e.g., HIV, STIs), violence, sexual and reproductive health, and drug use Structural determinants of health and human rights, including legislation, law enforcement, community engagement, intersectoral collaboration, stigma, barriers to health access, im/migration issues, and occupational safety and health Evidence-based services and best practices at various levels ranging from individual and community to policy-level interventions to identify best practices and avenues for future research and interventions Sex Work, Health, and Human Rights is an essential resource for researchers, policy-makers, governments, implementing partners, international organizations and community-based organizations involved in research, policies, or programs related to sex work, public health, social justice, gender-based violence, women's health and harm reduction. .

'The theme of the 18th World Congress of the International Association for Child and Adolescent Psychiatry and Allied Professions - IACAPAP - is 'Carrying Hope Between East and West for 3 C's: Children, Cultures, Commitments'. The aim of the congress book, to be presented in Istanbul in the Spring of 2008, is to focus interest on the effects of turmoil on children. It is necessary that mental health professionals start to plan how to meet children of immigrants and refugees and to develop the necessary services and methods to support those coming with a burden of psychiatric need.' Per-Anders Rydelius, M.D., Ph.D.

This second edition of the book provides up-to-date information on new drugs, new proven HIV prevention interventions, a new chapter on positive prevention, and current HIV epidemiology. This definitive text covers all aspects of HIV/AIDS in South Africa, from basic science to medicine, sociology, economics and politics. It has been written by a highly respected team of South African HIV/AIDS experts and provides a thoroughly researched account of the epidemic in the region.

This book provides an overview of the current epidemiology of the HIV epidemic among young people in Eastern and Southern Africa (ESA) and examines the efforts to confront and reduce the high level of new HIV infections amongst young people. Taking a multi-dimensional approach to prevention, the contributors discuss the many challenges facing these efforts, in view of the slow progress in curbing the incidence of

HIV amongst young people, focusing particularly on the structural and social drivers of HIV. Through an examination of these issues, chapters in this book provide valuable insights on how to mitigate HIV risk among young people and what can be regarded as the catalysts to mounting credible policy and programmatic responses required to achieve epidemic control in the region. The contributors draw on examples from a range of primary and secondary data sources to illustrate promising practices and challenges in HIV prevention, demonstrating links between conceptual approaches to prevention and lessons learnt from implementation projects in the region. Bringing together social scientists and public health experts who are actively engaged in finding effective solutions, the book discusses 'which interventions works', 'why they work', and the limitations and gaps in our knowledge to curb the pandemic amongst young people. As such it is an important read for researchers focusing on HIV/AIDS and public health.

Focuses on the contributions that social scientists can make to understanding emerging epidemics, their impact, the threats they pose, and their social and political contexts. This book examines emerging epidemics and offers a theoretical analysis of the use of epidemics and epidemiology as frameworks for understanding these phenomena. This book disseminates original research on learning in and from practice in pre-service teacher education. Authors such as Lederman and Lederman describe the student teaching practicum (or work-integrated learning [WIL]), which is an essential component of pre-service teacher education, as the 'elephant in the room'. These authors note that 'the capstone experience in any teacher education programme is the student teaching practicum... [a]fter all, this is where the rubber hits the road'. However, many teacher educators will agree that this WIL component is sometimes very insufficient in assisting the student teacher to develop their own footing and voice as a teacher. This is the 'gap' that this research book addresses. Most of the chapters in the book report empirical data, with the exception of two chapters that can be categorized as systematic reviews. WIL is addressed from various angles in the chapters. Chapter 6 focuses on research related to what makes Finnish teacher education so effective, and in Chapter 4 researchers of the University of Johannesburg disseminate their findings on establishing a teaching school (based on Finnish insights) in Johannesburg. Chapter 3 highlights the challenges faced in open-and distance learning teacher education contexts. Several of the chapters disseminate research findings on alternative interventions to classic WIL, namely, where "safe spaces" or laboratories are created for student teachers to learn and grow professionally. These could either be simulations, such as software programmes and avatars in the intervention described in Chapter 2; student excursions, as the findings in chapters 5, 7 and 10 portray; or alternative approaches to WIL (e.g. Chapters 11 and 12). The book is devoted to scholarship in the field of pre-service teacher education. The target audience is scholars working in the fields of pre-service teacher education, work-integrated learning, and self-directed learning. The book makes a unique contribution in terms of firstly its extensive use of Cultural-Historical Activity Theory as a research lens, and secondly in drawing on various theoretical frameworks. Both quantitative and qualitative research informed the findings of the book.

For nearly two decades, E. D. Hirsch's book Cultural Literacy has provoked debate over whose knowledge should be taught in schools, embodying the culture wars in

education. Initially developed to mediate against the multicultural "threat," his educational vision inspired the Core Knowledge curriculum, which has garnered wide support from an array of communities, including traditionally marginalized groups. In this groundbreaking book, Kristen Buras provides the first detailed, critical examination of the Core Knowledge movement and explores the history and cultural politics underlying neoconservative initiatives in education. Ultimately, Rightist Multiculturalism does more than assess the limitations and possibilities of Core Knowledge. It illuminates why troubling educational reforms initiated by neoconservatives have acquired grassroots allegiance despite criticism that their vision is culturally elitist. More importantly, Buras argues understanding that neoconservative school reform itself has become a multicultural affair is the first step toward fighting an alternative war of position—that is, reclaiming multiculturalism as a radically transformative project. This book examines statistical methods and models used in the fields of global health and epidemiology. It includes methods such as innovative probability sampling, data harmonization and encryption, and advanced descriptive, analytical and monitory methods. Program codes using R are included as well as real data examples. Contemporary global health and epidemiology involves a myriad of medical and health challenges, including inequality of treatment, the HIV/AIDS epidemic and its subsequent control, the flu, cancer, tobacco control, drug use, and environmental pollution. In addition to its vast scales and telescopic perspective; addressing global health concerns often involves examining resource-limited populations with large geographic, socioeconomic diversities. Therefore, advancing global health requires new epidemiological design, new data, and new methods for sampling, data processing, and statistical analysis. This book provides global health researchers with methods that will enable access to and utilization of existing data. Featuring contributions from both epidemiological and biostatistical scholars, this book is a practical resource for researchers, practitioners, and students in solving global health problems in research, education, training, and consultation.

Since 2007 the World Health Organization (WHO) and the Joint United Nations Programme on HIV/AIDS (UNAIDS) have recommended voluntary medical male circumcision (VMMC) as an important strategy for the prevention of heterosexually acquired HIV in men in settings where the prevalence of heterosexually transmitted HIV is high. Over 25 million men and adolescent boys in East and Southern Africa have been reached with VMMC services. These new guidelines update earlier WHO recommendations to maximize the HIV prevention impact of safe VMMC services and aim to guide the transition to the sustained provision of interventions with a focus on the health and well-being of both adolescent boys and men.

Revised to take account of developments in the field, this edition includes new discussion of the major issues in current UK and European research as well as expanded coverage of the practical applications of this research.

An Introduction to Theories of Human Development provides a comprehensive view of the primary theoretical models of human development including those from the biological, psychoanalytic, behavioral, and cognitive developmental perspectives. Along with a brief discussion of a historical background for each of

these approaches, this book examines the application of these theories to various aspects of human development, such as the effectiveness of early intervention, individual differences, adolescence, and sociobiology.

This book focuses on the issues encountered by children and young people who are living with HIV/AIDS. It examines their lived experiences associated with HIV/AIDS, and studies groups of children and youngsters from around the globe. Connecting empirical information with real-life situations, the book brings together results from empirical research that relates to these children and young people. Its chapters can be used as evidence for health care providers to implement socially and culturally appropriate services to assist individuals and groups of children and young people who are living with HIV/AIDS in many societies. Many of these young people are from the most marginalized and vulnerable groups; and many have been orphaned by the death of their HIV-positive parents. Marginalized young people such as refugees, migrants and street children are most at risk due to the use of illicit drugs, their exposure to unprotected sex (in exchange for food, money and protection), and stigma associated with their marginalized lives. The impact that HIV/AIDS has on the opportunities for these young people to be able to lead healthy adult lives is considerable. This book gives a voice to these children and young people and advances our understanding of their lived experiences and needs.

HIV/AIDS continues to be the pandemic of our times and there has not been a comprehensive medically based AIDS prevention book published in the last 5 years. It is estimated that 36 to 45 million people including 2-3 million children already are infected worldwide and an additional 4-7 million more are infected each year. There are about 6,000 new infections daily and about 12 million AIDS orphans. People receiving AIDS treatments feel well and have no detectable viral load, but still can infect others. And even when a vaccine is found, it will take many years before it can be administered across the developing world. \*

Discusses all aspects of AIDS prevention, from epidemiology, molecular immunology and virology to the principles of broad-based public health prevention interventions. \* Special focus on the array of interventions that have been proven effective through rigorous study \* Identifies new trends in HIV/AIDS epidemiology and their impact on creating and implementing prevention interventions \* Incorporates virology, biology, infectious diseases, vaccinology, microbicides and research methodologies into AIDS prevention

Infectious diseases are the leading cause of death globally, particularly among children and young adults. The spread of new pathogens and the threat of antimicrobial resistance pose particular challenges in combating these diseases. Major Infectious Diseases identifies feasible, cost-effective packages of interventions and strategies across delivery platforms to prevent and treat HIV/AIDS, other sexually transmitted infections, tuberculosis, malaria, adult febrile illness, viral hepatitis, and neglected tropical diseases. The volume emphasizes the need to effectively address emerging antimicrobial resistance,

strengthen health systems, and increase access to care. The attainable goals are to reduce incidence, develop innovative approaches, and optimize existing tools in resource-constrained settings.

The journal focuses on publishing original research, comprehensive review articles, short reports and commentaries on reproductive health in Africa. The International Handbook on the Demography of Sexuality is the first book to specifically address the study of sexuality from a demographic perspective.

Demographic research has largely paid little attention to sexuality as a whole, or sexual orientation in particular, other than in studies examining the "consequences" of sex – sexually transmitted infections or fertility. Instead, the content of this handbook explores population sexuality in order to describe the prevalence of sexual behaviors, desires, and identities, as well as their connections with other demographic outcomes. The focus is on analyzing sexuality as a demographic topic in its own right, rather than solely as a variable in studies of sexually transmitted infection or other health-related topics. In this book, both researchers with traditional demographic backgrounds, as well as those with training in other disciplines, provide an overview of the state of current research on population sexuality. These chapters provide a foundation for the development of research in the burgeoning field of the demography of sexuality.

This volume is the newest release in the authoritative series issued by the National Academy of Sciences on dietary reference intakes (DRIs). This series provides recommended intakes, such as Recommended Dietary Allowances (RDAs), for use in planning nutritionally adequate diets for individuals based on age and gender. In addition, a new reference intake, the Tolerable Upper Intake Level (UL), has also been established to assist an individual in knowing how much is "too much" of a nutrient. Based on the Institute of Medicine's review of the scientific literature regarding dietary micronutrients, recommendations have been formulated regarding vitamins A and K, iron, iodine, chromium, copper, manganese, molybdenum, zinc, and other potentially beneficial trace elements such as boron to determine the roles, if any, they play in health. The book also: Reviews selected components of food that may influence the bioavailability of these compounds. Develops estimates of dietary intake of these compounds that are compatible with good nutrition throughout the life span and that may decrease risk of chronic disease where data indicate they play a role. Determines Tolerable Upper Intake levels for each nutrient reviewed where adequate scientific data are available in specific population subgroups. Identifies research needed to improve knowledge of the role of these micronutrients in human health. This book will be important to professionals in nutrition research and education.

The narrator and protagonist of Dostoevsky's novel *The Adolescent* (first published in English as *A Raw Youth*) is Arkady Dolgoruky, a naïve 19-year-old boy bursting with ambition and opinions. The illegitimate son of a dissipated landowner, he is torn between his desire to expose his father's wrongdoing and the desire to win his love. He travels to St. Petersburg to confront the father he barely knows, inspired by an inchoate dream of communion and armed with a mysterious document that he believes gives him power over others. This new English version by the most acclaimed of Dostoevsky's translators is a masterpiece of pathos and high comedy.
