Introducing Active-Isolated Stretching, the revolutionary yet remarkably simple flexibility program—featuring 59 stretches for over 55 different sports and everyday activities! Whether you're a serious competitor or weekend warrior, you know that proper stretching before and after your workout can improve your performance, increase your flexibility, help prevent injury, and make you feel better. But did you know that the traditional way of stretching—lock your knees, bounce, hold, hurt, hold longer—actually makes muscles tighter and more prone to injury? There's a new and better way to stretch: Active-Isolated Stretching. And with *The Whartons' Stretch Book*, the method used successfully by scores of professional, amateur, and Olympic athletes is now available to everyone. This groundbreaking technique, developed by researchers, coaches, and trainers, and pioneered by Jim and Phil Wharton, is your new exercise prescription. You stretch it gently and quickly—for no more than two seconds—and release it before it goes into its protective contraction. Then you repeat. Simple, but the results are outstanding. *The Whartons' Stretch Book* explains it all. Part I contains the Active-Isolated Stretch Catalog, with fully illustrated, easy-to-follow stretches for each of five body zones, from neck and shoulders to trunk, arms, and legs—over fifty stretches in all. Erwan Le Corre, creator of the world-renowned fitness system MovNat, is on a mission to reintroduce natural movement to our modern lives with the most ancient movement skill set: walking, running, balancing, jumping, crawling, climbing, swimming, lifting, carrying, throwing, catching, and self-defense. Try to imagine an out-of-shape tiger stepping on an exercise machine to get a workout. It doesn't make any sense, does it? Wild animals simply move the way nature intended, and they become powerful, healthy, and free in the process. So why should it be any different for us? We have become "zoo-humans," separated from nature and living movement-impoverished, unnatural lifestyles. As a result, we are suffering physically, mentally, and spiritually. Exercise has become artificial and boring--a chore, if not a punishment.

We are training parts of our bodies, not the whole, and we have lost our drive for movement. What we need is not a better understanding of exercise physiology or more variety in fitness programs and modalities. What we need is simplicity, meaning, purpose, inspiration, and enjoyment. We need to get back to natural movement. In *The Practice of Natural Movement*, Le Corre demonstrates our innate and versatile ability to perform practical and adaptable movements. With countless techniques and movement variations, as well as strategies for practicing anytime and anywhere, he will inspire you to build a naturally strong and flexible body and to form yourself anew into a mindful, skillful, and physically capable human being.
