“In principle, venture capital is where the ordinarily conservative, cynical domain of big money touches dreamy, long-shot enterprise. In practice, it has become the distinguishing big-business engine of our time...[A] first-rate history.” —New Yorker “An excellent and original economic history of venture capital.” —Tyler Cowen, *Marginal Revolution* “It is an article of faith that ready access to venture capital makes an economy more dynamic. Nicholas frames the case historically.” —Wall Street Journal “A detailed, fact-filled account of America’s most celebrated moneymen.” —New Republic VC tells the riveting story of how the venture capital industry arose from America’s longstanding identification with entrepreneurship and risk-taking. Whether the venture is a whaling voyage setting sail from New Bedford (as in VC’s infancy) or the latest Silicon Valley startup, VC is a state of mind as much as a way of doing business, exemplified by an appetite for seeking extreme financial rewards, a tolerance for failure and experimentation, and a faith in the promise of innovation to generate new wealth. Tom Nicholas’s authoritative history takes us on a roller coaster of entrepreneurial successes and setbacks. It describes how iconic firms like Kleiner Perkins and Sequoia invested in Genentech and Apple as it tells the larger story of VC’s birth and evolution, revealing along the way why it is such a quintessentially American institution—one that has proven difficult to recreate elsewhere.

Entrepreneurs would do well to think strategically like investors. After all, founders are their own first investors. This book treats venture capital as a topic of entrepreneurial strategy, not finance, and includes a background of the industry, an explanation of all aspect of the VC Job Cycle and a framework called "VC Razor" for performing due diligence.

European private equity investment reached €47 billion in 2005, up 27% from 2004. Funds raised for private equity were €72 billion, up 250% on the previous year, both figures being all time highs. *Raising Venture Capital Finance in Europe* provides business owners, entrepreneurs and investors alike with a step-by-step approach to exploiting this market and funding new projects effectively. Written by Keith Arundale, an advisor and commentator on the European and US VC and private equity industry for over 20 years, the guide blends business experience with practical approaches to enable the reader to maximize the opportunities available. The book includes a series of real-life case studies from venture capitalists and entrepreneurs from around Europe, each with practical tips for successful venture capital finance raising. With forewords from Sir Paul Judge (Chairman, Enterprise Education Trust) and Patrick Sheehan (Chairman, Venture Capital Committee, European Private Equity and Venture Capital Association) the book begins with a brief introduction to the field, including an analysis of current trends and issues in the industry, and goes on to provide a detailed framework for an objective assessment of each business opportunity. The book looks at sources of finance and private equity, shows how to write a successful business plan, details the entire investment process, and considers the tax and legal issues involved. A particular feature of the book is that it looks at the topic from both sides - showing what the venture capitalist is looking for as well as detailing how an entrepreneur or business owner can make proposals attractive to those investors This means that the reader will be able to minimize time wasted on unnecessary activities and therefore develop investment approaches which are succinct, relevant, and give every chance of success.

If Amazon can't win in China, can anyone? When Amazon CEO Jeff Bezos visited China in 2007, he expected that one day soon China would be a double-digit percentage of Amazon's sales. Yet, by 2019, Amazon, the most powerful and successful ecommerce company in the

world, had quit China. In *Winning in China: 8 Stories of Success and Failure in the World's Largest Economy*, Wharton experts Lele Sang and Karl Ulrich explore the success and failure of several well-known companies, including Hyundai, LinkedIn, Sequoia Capital, and InMobi, as more and more businesses look to reap profits from the demand of 1.4 billion people. Sang, Global Fellow at the Wharton School of the University of Pennsylvania, and Ulrich, Vice Dean of Entrepreneurship and Innovation at the Wharton School, answer four critical questions: Which factors explain the success (or failure) of foreign companies entering China? What challenges and pitfalls can a company entering China expect to encounter? How can a prospective entrant realistically assess its chances? Which managerial decisions are critical, and which approaches are most effective? Sang and Ulrich answer these questions by examining the stories of eight well-known and respected companies that have entered China. They study: How Norwegian Cruise Line's entry into China displays how cultural differences can boost or sink different companies; How Intel, one of the oldest, most respected firms in Silicon Valley, thrived in a country that seems to favor agile upstarts; How Zegna, the Italian luxury brand, has emerged as another surprising success story and how it plans to navigate new headwinds from the COVID-19 pandemic. Through these engaging and illuminating stories, Sang and Ulrich offer a framework and path for organizations looking for a way to successfully enter the world's largest economy. History can be a teacher, and China, a country with 3,500 years of written history, has much to teach.

Entrepreneurs who dream of building the next Amazon, Facebook, or Google can take advantage of one of the most powerful economic engines the world has ever known: venture capital. To do so, you need to woo, impress, and persuade venture capitalists to take a risk on an unproven idea. That task is challenge enough. But choosing the right investor can be harder still. Even if you manage to get backing, you want your VC to be a partner, not some adversary who will undermine your vision in order to make a quick return. Jeffrey Bussgang is one of a few people who have played on both sides of this high-stakes game. By his early thirties, he had helped build two successful start-ups—one went public, the other was acquired. Now he draws on his experience and unique perspective on the "other side" as a venture capitalist helping entrepreneurs bring their dreams to fruition. Bussgang offers detailed insights, colorful stories, and practical advice gathered from his own experience as well as from interviews with dozens of the most successful players on both sides of the game, including Twitter's Jack Dorsey and LinkedIn's Reid Hoffman. He reveals how to get noticed, perfect a pitch, and negotiate a partnership that works for everyone. An insider's guide to the secrets of the world venture capital, *Mastering the VC Game* will prove invaluable for entrepreneurs seeking capital and successful partnerships.

An essential guide to understanding the dynamics of a startup's board of directors Let's face it, as founders and entrepreneurs, you have a lot on your plate—getting to your minimum viable product, developing customer interaction, hiring team members, and managing the accounts/books. Sooner or later, you have a board of directors, three to five (or even seven) Type A personalities who seek your attention and at times will tell you what to do. While you might be hesitant to form a board, establishing an objective outside group is essential for startups, especially to keep you on track, call you out when you flail, and in some cases, save you from yourself. In *Startup Boards*, Brad Feld—a Boulder, Colorado-based entrepreneur turned-venture capitalist—shares his experience in this area by talking about the importance of having the right board members on your team and how to manage them well. Along the way, he shares valuable insights on various aspects of the board, including how they can support you, help you understand your startup's milestones and get to them faster, and hold you accountable. Details the process of choosing board members, including interviewing many people, checking references, and remembering that there should be no fear in rejecting a wrong fit Explores the importance of running great meetings, mixing social time with business

Venture capital (VC) refers to investments provided to early-stage, innovative, and high growth start-up companies. A common characteristic of all venture capital investments is that investee companies do not have cash flows to pay interest on debt or dividends on equity. Rather, investments are made with a view towards capital gain on exit. The most sought after exit routes are an initial public offering (IPO), where a company lists on a stock exchange for the first time, and an acquisition exit (trade sale), where the company is sold in entirety to another company. However, VCs often exit their investments by secondary sales, wherein the entrepreneur retains his or her share but the VC sells to another company or investor buybacks, where the entrepreneur repurchases the VC's interest and write-offs (liquidations). The Oxford Handbook of Venture Capital provides a comprehensive picture of all the issues dealing with the structure, governance, and performance of venture capital from a global perspective. The handbook comprises contributions from 55 authors currently based in 12 different countries.

Experts in public economics and financial economics discuss the special role of venture capital and if public policy should promote the venture capital industry; empirical and theoretical perspectives are developed. The existing literature in both public economics and financial economics often fails to consider how appropriate and effective public policy may be in promoting the venture capital industry. Public economics has dealt extensively with the effect of taxes and subsidies but has neglected the unique role of venture capitalists as active investors who provide not only funding but added value. Financial economics has emphasized the special role of the venture capitalist but has not focused on the real effects of venture capital in industry equilibrium or the role of public policy. This volume in the CESifo Seminar series brings together experts in public and financial economics to develop a theoretically and empirically informed international policy perspective for an era in which policymakers increasingly look to venture capital as a source of jobs, innovation, and economic growth. The chapters in part I analyze data on the levels of venture capital fundraising in Europe, problems in the bank-oriented beginnings of German venture capital finance in the 1970s, and the inefficiency of Canadian labor-sponsored venture capital funds. Part II looks at the effect of venture capital on labor market performance, the importance of exit opportunities, and the effect of information inflows on the venture capital cycle. The chapters in part III take the perspective of public economics, reviewing the role of public policy in addressing potential market failures, improving the quality of venture capital investments, and affecting entrepreneurial business activity through tax policy.

The Business of Healthcare Innovation is the first wide-ranging analysis of business trends in the manufacturing segment of the health care industry. Written by professors of the Wharton School and industry executives, this book provides a detailed overview of the pharmaceutical, biotechnology, genomics/proteomics, medical device and information technology sectors. It analyses the market structures of these sectors as well as the business models and corporate strategies of firms operating within them. Most importantly, the book describes the growing convergence between these sectors and the need for executives in one sector to increasingly draw upon trends in the others. It will be essential reading for students and researchers in the field of health management, and of great interest to strategy scholars, industry practitioners and management consultants.

years of combined experience as practitioners in and/or academic investigators of private equity, Lerner, Leamon, and Hardyman explain how the fascinating world of private equity works, from start to finish, how it creates value, and where it may destroy value.

Venture Capital is a marriage between 'people with money and no ideas' and 'people with ideas and no money'. It is a high-risk investment vehicle with the potential for manifold returns and the possibility of a complete investment written-off. Although it is essentially private money and smaller in size than traditional financing pillars, its impact has been phenomenal, even to the extent of transforming the way we live in the modern world. Yet the fact remains that the business of venture capital is not fully understood by startup founders and fund managers are also not familiar with the inner workings of other venture funds. And, as more public or taxpayers' money flows into this asset class, it begs a shift from the existing esoteric styles to more transparent and predictable operations. It would also be beneficial if the craft of venture capital is well understood by the business community and most importantly, policymakers as Demystifying Venture Capital: How it works and How to get primarily written to address these concerns, and to explain the subject in a nontechnical manner, as far as possible. A handbook for fund managers, startups, academicians interested in the subject, policy makers, and aspiring entrepreneurs, this book is unique as it has been written along with the top 25 venture funds in India as co-authors. The first part builds the concepts and theoretical framework of venture investing throughout the venture capital life cycle, giving readers a robust academic backdrop while the second part offer 25 first-hand accounts of how VCs invest, where they invest, what they look for while investing, providing invaluable insights into the minds and methods of VCs. All in all, this prototype is a first-of-its-kind endeavour to deliver a 360-degree + view of the Venture Capital universe.

Offering a deep insight into the venture capital deal-making process, *Raising Venture Capital* also provides valuable introduction to the subject. The book is practical in focus but based on sound academic theory, research and teaching materials gathered over the last 4 years at Tanaka Business School. It also covers valuation methods for venture capital investments, and portfolio management. Part two illustrates how successful entrepreneurs raise finance from venture capitals, and gives details on how to approach venture capitals, how to choose the right venture capital firm, and how venture capitals and entrepreneurs work together after the deal is done. Part three gives a blow-by-blow account of the structure of a venture capital deal. Despite all of the writing on venture capital, there is a missing part of the literature. There has been no book written about raising a venture capital fund. It remains a secret to a few privileged venture capitalists who have gone through this fundraising process. Until now . . .

This book serves as a guide. It dives into the process of raising a venture capital fund, the how-tos, the unique language of the limited partner (LP) world, secrets of how LPs think about fund diligence and alignment, the best practices in fundraising, what works, and how you can best prepare for success. I've written this book after spending a decade investing into venture capital funds at a \$30B wealth management firm and a \$160B technology company. I've been on both sides of the table, the VC and the LP side. I also co-founded a company that specifically focuses on co-building venture capital businesses, which includes helping VCs understand the intricate dynamics of raising a venture capital fund. process. Readers will learn what series funding is, the difference between an angel and super angel investor, and how to go about identifying ideas worthy of funding. The study extends the literature on venture capital by examining whether entrepreneur's choice for an external investor and certain firm characteristics have an impact on venture success or not. The focus is set on the differences in value creation by venture capitalists and business angels for ventures of the high- and low-technology sector. The assessment of a data set including 252 Series A financing rounds by venture capitalist firms, business angels and collaborative investments of both investors conducted between 2005 and 2012 unveils value enhancing aspects for all three financing solutions. Overall, start-ups initially financed by venture capitalist firms perform best with regard to general venture success, whereas start-ups collaboratively supported by venture capitalists and business angels have the highest chances to exit successfully through a trade sale. It becomes further apparent that ventures located in one of the high-technology industries 'internet', 'pharmaceuticals' and 'high-tech', ventures that are longer established in the market and ventures whose Series A financing round was executed more recently indicate an enhanced likelihood of success.

Entrepreneurship is now unanimously considered a major engine for socio-economic development, mainly because it creates jobs and innovation. Governments around the world pay special attention to removing entrepreneurial barriers in order to support development via different policies, especially entrepreneurial finance. Developing, emerging and transition economies (DETEs) significantly differ from industrialized countries because of their specific conditions: institutions, infrastructure facilities, and bureaucratic procedures within the administrative system. Thus, firms and their entrepreneurs in and from DETEs may behave differently, particularly in terms of their financial strategies. Therefore, contextualizing is critical to better understand the relationship between entrepreneurial finance, innovation, and development in DETEs. This book provides a systematic and profound understanding of how finance, entrepreneurship, innovation, and their interactions contribute to economic development in DETEs, which cover a large number of countries in Asia, Central and Eastern Europe, Latin America, and Africa. The book mainly includes empirical studies and is divided into four parts. Part A includes four chapters which adopt a multinational approach to examine different sources and types of finance for entrepreneurship and small business in different groups of countries classified as DETEs. Part B also includes four chapters and focuses on entrepreneurial finance in specific countries belonging to the DETEs. Part C goes beyond the business scope of entrepreneurial finance and includes three chapters concerned with the relationship between finance, women's entrepreneurship, and poverty. Part D includes three chapters focusing on the comparison within developing countries as well as between developing and developed countries. This essential and comprehensive resource will find an audience amongst academics, students, educators, and practitioners, as well as policymakers and regulators.
