This `dream-laden and spooked? (Marina Warner, London Review of Books) story is to many one of the best-loved books of the twentieth century. Munthe spent many years working as a doctor in Southern Italy, labouring unstintingly during typhus, cholera and earthquake disasters. It was during this period that he came across the ruined Tiberian villa of San Michele, perched high above the glittering Bay of Naples on Capri. With the help of Mastro Nicola and his three sons, and with only a charcoal sketch roughly drawn on a garden wall to guide them, Munthe devoted himself to rebuilding the house and chapel. Over five long summers they toiled under a sapphire-blue sky, their mad-cap project leading them to buried skeletons and ancient coins, and to hilarious encounters with a rich cast of vividly-drawn villagers. The Story of San Michele reverberates with the mesmerising hum of a long, hot Italian summer. Peopled with unforgettable characters, it is as brilliantly enjoyable and readable today as it was upon first publication. The book quickly became an international bestseller and has now been translated into more than 30 languages; it is today an established classic, and sales number in the millions.

A brilliant and courageous doctor reveals, in gripping accounts of true cases, the power and limits of modern medicine. Sometimes in medicine the only way to know what is truly going on in a patient is to operate, to look inside with one's own eyes. This book is exploratory surgery on medicine itself, laying bare a science not in its idealized form but as it actually is -- complicated, perplexing, and profoundly human. Atul Gawande offers an unflinching view from the scalpel's edge, where science is ambiguous, information is limited, the stakes are high, yet decisions must be made. In dramatic and revealing stories of patients and doctors, he explores how deadly mistakes occur and why good surgeons go bad. He also shows us what happens when medicine comes up against the inexplicable: an architect with incapacitating back pain for which there is no physical cause; a young woman with nausea that won't go away; a television newscaster whose blushing is so severe that she cannot do her job. Gawande offers a richly detailed portrait of the people and the science, even as he tackles the paradoxes and imperfections inherent in caring for human lives. At once tough-minded and humane, Complications is a new kind of medical writing, nuanced and lucid, unafraid to confront the conflicts and uncertainties that lie at the heart of modern medicine, yet always alive to the possibilities of wisdom in this extraordinary endeavor. Complications is a 2002 National Book Award Finalist for Nonfiction.

What should happen when doctors and parents disagree about what would be best for a child? When should courts become involved? Should life support be stopped against parents' wishes? The case of Charlie Gard, reached global attention in 2017. It led to widespread debate about the ethics of disagreements between doctors and parents, about the place of the law in such disputes, and about the variation in approach between different parts of the world. In this book, medical ethicists Dominic Wilkinson and Julian Savulescu critically examine the ethical questions at the heart of disputes about medical treatment for children. They use the Gard case as a springboard to a wider discussion about the rights of parents, the harms of treatment, and the vital issue of limited resources. They discuss other prominent UK and international cases of disagreement and conflict. From opposite sides of the debate Wilkinson and Savulescu provocatively outline the strongest arguments in favour of and against treatment. They analyse some of the distinctive and challenging features of treatment disputes in the 21st century and argue that disagreement about controversial ethical questions is both inevitable and desirable. They outline a series of lessons from the Gard case and propose a radical new 'dissensus' framework for future cases of disagreement. This new book critically examines the core ethical questions at the heart of disputes about medical treatment for children. The contents review prominent cases of disagreement from the UK and internationally and analyse some of the distinctive and challenging features around treatment disputes in the 21st century. The book proposes a radical new framework for future cases of disagreement around the care of gravely ill people.

In the 1960s the premise of this story did happen. Practicing physicians in this era were treated as omnipotent, creating a godlike complex allowing some of them to take it upon themselves to choose which babies, when born, should live or die. Selectively placing babies with visible flaws in boxes with medical tape over their mouths to silence their cries, than ordering nurses to place those boxes in a closet until...death. But what if they had lived? This could have been their story... Minnesota, 1969 - Carolyn, a young nurse, assisting with the delivery of a baby boy, watches in disbelief and horror as Dr. Jefferson attempts to dispose of the baby like unwanted trash just because he was born with a visible flaw. Unwilling to let the boy die, Carolyn finds herself doing the unthinkable – kidnapping the child and concocting a web of lies to protect herself, her family, and her new son Joe. Minnesota

1998 - Carolyn's tenuous web of lies begins to unravel. Joe, has overcome the challenges from his birth and is now an assistant district attorney. Upon learning the circumstances of his birth, he embarks on a journey for justice for him and the babies who came before him. Every step toward justice reveals unimaginable truths. Joe finds himself asking if the pain of discovering the secrets of the past is worth justice after all. The ethical and moral dilemmas along with multiple fast moving plot lines will engage the reader and generate great discussion points for book clubs across the country! Our hero, Joe, is handsome, smart, successful, and has risen to meet the challenges of his disability! If you have had to overcome challenges or know someone who has you will love this novel!

From New York Times bestselling author Krista Lakes comes a sexy standalone novel about the baddest bad boy doctor and the sweet little nurse that he falls for. When I left my small hometown years ago, I never expected to come back. I certainly never expected that when I did, I'd be working for him. He's the town's doctor. He's supposed to be a respectable member of society, a pillar for the community. He's supposed to have come a long way from the bad boy who rode a motorcycle in high school. But he hasn't. One glance from those lustful eyes looking at me tells me that he has the same voracious appetites that he did when we were younger. Only it's not quite the same stare. It's more urgent. It's more intense. I'm not the same nerdy girl who tutored him. I've grown up, developed fertile curves that I know he finds irresistible. In this small town, rumors travel fast, and the family doctor can't be seen as a player. So he does try to resist. And I do too. But with every smoldering glance and moment of sexual tension, we find our barriers breaking down. After a stressful night of touch-and-go baby delivery, a moment of elation overcomes our inhibitions. It seems like maybe we'll need to confront those rumors sooner rather than later, especially before I begin to show the results of that night. Can I give this doctor the family he has always desired?
