“Endlessly illuminating and a sheer pleasure to read.”  
—Jack Miles, author of *God: A Biography* Daring to take the great biblical account of human origins seriously, but without credulity The most influential story in Western cultural history, the biblical account of Adam and Eve is now treated either as the sacred possession of the faithful or as the butt of secular jokes. Here, acclaimed scholar Stephen Greenblatt explores it with profound appreciation for its cultural and psychological power as literature. From the birth of the Hebrew Bible to the awe-inspiring contributions of Augustine, Dürer, and Milton in bringing Adam and Eve to vivid life, Greenblatt unpacks the story’s many interpretations and consequences over time. Rich allegory, vicious misogyny, deep moral insight, narrow literalism, and some of the greatest triumphs of art and literature: all can be counted as children of our “first” parents.

Are human lives ultimately meaningless? Is our inevitable death bad? Would immortality be better? Should we hasten our deaths by taking our own lives in acts of suicide? Many people ask these big questions and many are plagued by them. Surprisingly few analytic philosophers have spoken to these important questions. When they have engaged the big existential questions they have tended, like more popular writers, to offer comforting, optimistic answers. *The Human Predicament* offers a less sanguine assessment. David Benatar invites readers to take a clear-eyed view of our situation, defending a substantial, but not unmitigated, pessimism about human life. Benatar argues that while our lives can have some meaning, cosmically speaking we are ultimately the insignificant beings that we often fear we are. A candid appraisal reveals that the quality of

life, although less bad for some people than for others, leaves much to be desired in even the bestcases. But death, David Benatar argues, is hardly the solution. Our mortality exacerbates rather than mitigates our cosmic meaninglessness. It can release us from suffering but even when it does it imposes another cost - annihilation. This unfortunate state of affairs has nuanced implications for how we should think about immortality, about suicide, and about the aspects of life in which we can and do find deeper meaning. Engaging profound existential questions with analytic rigor and clarity, *The Human Predicament* is clear eyed, unsentimental, and deeply provocative to some of our mostcherished beliefs.

Angeles Times • San Francisco Chronicle • Chicago Tribune • New York • Newsday • Library Journal • Publishers Weekly In a profound work that pivots from the biggest questions about American history and ideals to the most intimate concerns of a father for his son, Ta-Nehisi Coates offers a powerful new framework for understanding our nation’s history and current crisis. Americans have built an empire on the idea of “race,” a falsehood that damages us all but falls most heavily on the bodies of black women and men—bodies exploited through slavery and segregation, and, today, threatened, locked up, and murdered out of all proportion. What is it like to inhabit a black body and find a way to live within it? And how can we all honestly reckon with this fraught history and free ourselves from its burden? *Between the World and Me* is Ta-Nehisi Coates’s attempt to answer these questions in a letter to his adolescent son. Coates shares with his son—and readers—the story of his awakening to the truth about his place in the world through a series of revelatory experiences, from Howard University to Civil War battlefields, from the South Side of Chicago to Paris, from his childhood home to the living rooms of mothers whose children’s lives were taken as American plunder. Beautifully woven from personal narrative, reimagined history, and fresh, emotionally charged reportage, *Between the World and Me* clearly illuminates the past, bracingly confronts our present, and offers a transcendent vision for a way forward.

The treatise De mundo offers a cosmology in the Peripatetic tradition which subordinates what happens in the cosmos to the might of an omnipotent god. Thus the work is paradigmatic for the philosophical and religious concepts of the early imperial age, which offer points of contact with nascent Christianity.

Brought together by a mutual fascination with pigeons, Louisa, a young chambermaid at the Hotel New Yorker, forms an unlikely friendship with the hotel's most famous and unusual resident, eccentric and pioneering inventor Nikola Tesla, during his final days. Reprint.

Henri Lefebvre has considerable claims to be the greatest living philosopher. His work spans some sixty years and includes original work on a diverse range of subjects, from dialectical materialism to architecture, urbanism and the experience of everyday life. The Production of Space is his major philosophical work and its translation has been long awaited by scholars in many different fields. The book is a search for a reconciliation between mental space (the space of the philosophers)

and real space (the physical and social spheres in which we all live). In the course of his exploration, Henri Lefebvre moves from metaphysical and ideological considerations of the meaning of space to its experience in the everyday life of home and city. He seeks, in other words, to bridge the gap between the realms of theory and practice, between the mental and the social, and between philosophy and reality. In doing so, he ranges through art, literature, architecture and economics, and further provides a powerful antidote to the sterile and obfuscatory methods and theories characteristic of much recent continental philosophy. This is a work of great vision and incisiveness. It is also characterized by its author's wit and by anecdote, as well as by a deftness of style which Donald Nicholson-Smith's sensitive translation precisely captures.

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful.

Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize

The last century has seen enormous leaps in the development of digital technologies, and most aspects of modern life have changed significantly with their widespread availability and use. Technology at various scales - supercomputers, corporate networks, desktop and laptop computers, the internet, tablets, mobile phones, and processors that are hidden in everyday devices and are so small you can barely see them with the naked eye - all pervade our world in a major way. *Computers and Society: Modern Perspectives* is a wide-ranging and comprehensive textbook that critically assesses the global technical achievements in digital technologies and how they are applied in media; education and learning; medicine and health; free speech, democracy, and government; and war and peace. Ronald M. Baecker reviews critical ethical issues raised by computers, such as digital inclusion, security, safety, privacy, automation, and work, and discusses social, political, and ethical controversies and choices now faced by society. Particular attention is paid to new and exciting developments in artificial intelligence and machine learning, and the issues that have arisen from our complex relationship with AI.

Amrico Paredes (1915-1999) was a folklorist, scholar, and professor at the University of Texas at Austin who is widely acknowledged as one of the founding scholars of Chicano Studies. Born in Brownsville, Texas, along the southern U.S.-Mexico Border, Paredes' early experiences impacted his writing during his later years as an academic. He grew up between two worlds—one written about in books, the other sung about in ballads and narrated in folktales. He attended a school system that emphasized conformity and Anglo values in a town whose population was 70 percent Mexican in origin. During World War II, he worked for the International American Red Cross and wrote for the Stars and Stripes army newspaper in the Far East. He returned to Texas with a new bride and a passion for continuing his formal education and his writing. Paredes did both at the University of Texas at Austin, where he completed his Ph.D. in 1956. With the publication of his dissertation, "With His Pistol in His Hand": A Border Ballad and Its Hero in 1958, Paredes soon emerged as a challenger to the status quo. His book questioned the mythic nature of the Texas Rangers and provided an alternative counter-cultural narrative to the existing traditional narratives of Walter Prescott Webb and J. Frank Dobie, among others. For the next forty years he was a brilliant teacher and prolific writer who championed the preservation of border culture and history. He was a soft-spoken, at times temperamental, yet fearless professor. He was a co-founder in 1970 of the Center for Mexican American Studies at the University of Texas at Austin and is credited with introducing the concept of Greater Mexico, decades before its wider acceptance today among transnationalist scholars. He received numerous awards, including La Orden del Aguila Azteca, Mexico's most prestigious service award to a foreigner. Paredes became a scholar of scholars, guiding many students to become academic leaders. Manuel F.

Medrano interviewed Paredes over a five-year period before Paredes' death in 1999, and also interviewed his family and colleagues. For many Mexican Americans, Paredes' historical legacy is that he raised, carried, and defended their cultural flag with a dignity that both friends and foes respected.

Galileo's Dialogue Concerning the Two Chief World Systems, published in Florence in 1632, was the most proximate cause of his being brought to trial before the Inquisition. Using the dialogue form, a genre common in classical philosophical works, Galileo masterfully demonstrates the truth of the Copernican system over the Ptolemaic one, proving, for the first time, that the earth revolves around the sun. Its influence is incalculable.
