Encyclopedia of Production and Manufacturing Management Paul M. Swamidass,2006-09-21 The Encyclopedia of Production and Manufacturing Management is an encyclopedia that has been developed to serve this field as the fundamental reference work. Over the past twenty years, the field of production and operations management has grown more rapidly than ever and consequently its boundaries have been stretched in all directions. For example, in the last two decades, production and manufacturing management absorbed in rapid succession several new production management concepts: manufacturing strategy, focused factory, just-in-time manufacturing, concurrent engineering, total quality management, supply chain management, flexible manufacturing systems, lean production, and mass customization, to name a few. This explosive growth makes the need for this volume abundantly clear. The manufacturing industry thinks and acts more broadly than it did several decades ago. The most notable change has been the need for manufacturing managers to think in technological, strategic and competitive terms. This is a very favorable development, and it leads to manufacturing success. The entries in this encyclopedia include the most recent technical and strategic innovations in production and

manufacturing management. The encyclopedia consists of articles of varying lengths. The longer articles on important concepts and practices range from five to fifteen pages. There are about 100 such articles written by nearly 100 authors from around the world. In addition, there are over 1000 shorter entries on concepts, practices and principles. The range of topics and depth of coverage is intended to suit both student and professional audiences. The shorter entries provide digests of unfamiliar and complicated subjects. Difficult subjects are made intelligible to the reader without oversimplification. The strategic and technological perspectives on various topics give this Encyclopedia its distinctiveness and uniqueness. The world of manufacturing today is increasingly competitive. It is apparent that manufacturers must respond to these competitive pressures with technical and strategic innovation. This encyclopedia has been developed to help researchers, students and those in the manufacturing industry to understand and implement these ongoing changes in the field.

*Enterprise Resource Planning for Global Economies: Managerial Issues and Challenges* Ferran, Carlos, Salim, Ricardo, 2008-04-30 Local functional systems that create inefficient islands of information are being replaced by expensive enterprise-wide applications that unify the functional areas; however, while we have not yet been able to completely and seamlessly integrate across functions, we find that the new islands of information are no longer functional but political, cultural, linguistic, and geographical. The global village is a reality and enterprise resource planning (ERP) implementations face new issues and challenges. Enterprise Resource Planning for Global Economies: Managerial Issues and Challenges provides authoritative research on the theoretical frameworks and pragmatic discussions on global implementations of information systems, particularly ERP systems. **Executive Guide to Business Success through Human-Centred Systems** Andrew Ainger, Rukesh Kaura, Richard Ennals, 2012-12-06 This book is about people and skilled work. There has been much turmoil in the business environment about how to best manage the balance between people and technology, at a time when pressures for cost reduction are ever greater. Our argument is that people are central to business success, and the appropriate use of technology should support their needs. This is not always easy in practice. We work in a period when change occurs in ever-shortening cycles. Black-and-white solutions may seem attractive, but the long-term consequences are rarely advantageous. A new system is required, building on lessons from the past. Human-centred systems build upon core skills of the workforce within a rich, emancipatory environment, utilising the benefits of technology. Change can be embraced to achieve competitive advantage and mutual benefit. The three authors are, respectively, engineering director of an innovative international manufacturing company; analyst for an international merchant bank; and university business school professor. The book is intended to offer a new synthesis of theory and practical experience, derived from recent British and European collaborative programmes. We are grateful to our colleagues and families for their tolerance during the writing of this book. Even human-centred books impose pressures on busy people. Old Windsor, Brighton and Kingston, June 1995 A.A. R.K.
