The gold standard for evidence-based public health, The Guide to Community Preventive Services is a primary resource to improve health and prevent disease in states, communities, independent, nonfederal Task Force on Community Preventive Services, The Guide uses comprehensive systemic review methods to evaluate population-oriented health interventions. The recommendations of the Task Force are explicitly linked to the scientific evidence developed during systematic reviews. This volume examines the effectiveness and efficiency of interventions to combat such risky behaviors as tobacco use, physical inactivity, and violence; to reduce the impact and suffering of specific conditions such as cancer, diabetes, vaccine-preventable diseases, and motor vehicle injuries; and to address social determinants of health such as education, housing, and access to care. The chapters are grouped into three broad categories: changing risk behaviors; reducing specific diseases, injuries, and impairments; and methodological background for the book itself.

Functional foods and nutraceuticals, dietary supplements, and natural antioxidants have established their potential roles in the protection of human health against disease. Nutraceuticals and Functional Foods in Human Health and Disease Prevention examines the benefits, efficacy, and success of properly designed nutraceuticals and functional foods in human health and their possible application in disease prevention. The book demonstrates diverse disease pathophysiology and how nutraceuticals and functional food can be used to combat and prevent disease. The book discusses global food habits and trends, safety and toxicology, and how food addiction or overindulgence of food can lead to a variety of disease states. It then highlights how supplements help in disease prevention. Although a significant number of nutraceuticals and functional foods have demonstrated their efficacy, a large number of supplements are still surviving on false claims. Therefore, the editors underscore risks and benefits, and why government regulatory agencies are so critical of these nutraceutical supplements. With the global nutraceuticals market expected to reach \$204.8 billion by 2017, what once seemed a very niche sector has become big business. An overview of nutraceuticals and functional foods and their application in human health, this book exhaustively covers antioxidants, functional foods, and nutraceuticals in human health and disease prevention. With contributions from experts and pioneers, the book gives insight into the role of functional foods in optimal diet and exercise.

Social Work in Public Health and Hospitals explores a variety of issues related to social work in hospital settings as well as the public policy concerns that guide them. Topics discussed include hospital stays for the elderly, identifying postnatal depression during well-child visits, breast-feeding and awareness of health recommendations, maternal health services in Nigeria, children living with parents with HIV and AIDS, patients' rights in hospitals, harm reduction in hospitals, and more. The book also looks at public health services at rural and community clinics, at university hospitals, and at doctors' offices.

Many Americans believe that people who lack health insurance somehow get the care they really need. *Care Without Coverage* examines the real consequences for adults who lack health insurance. The study presents findings in the areas of prevention and screening, cancer, chronic illness, hospital--based care, and general health status. The committee looked at the consequences of being uninsured for people suffering from cancer, diabetes, HIV infection and AIDS, heart and kidney disease, mental illness, traumatic injuries, and heart attacks. It focused on the roughly 30 million -- one in seven--working--age Americans without health insurance. This group does not include the population over 65 that is covered by Medicare or the nearly 10 million children who are uninsured in this country. The main findings of the report are that working-age Americans without health insurance are more likely to receive too little medical care and receive it too late; be sicker and die sooner; and receive poorer care when they are in the hospital, even for acute situations like a motor vehicle crash.

Updated for its Seventh Edition, *Principles of Ambulatory Medicine* is the definitive reference for all clinicians caring for adult ambulatory patients. It provides in-depth coverage of the evaluation, management, and long-term course of all clinical problems addressed in the

outpatient setting. A major focus is on preventive care, grounded in excellent patient-physician communication. This edition features increased coverage of preventive care, particularly the impact of genetic testing as a disease predictor. For easy reference, the book is organized by body system and each chapter begins with an outline of key topics. References to randomized controlled clinical trials, meta-analyses, and consensus-based recommendations are boldfaced.

An exhaustive report on recommended clinical preventive services that should be provided to patients in the course of routine clinical care, including screening for vascular, neoplastic and infectious diseases, and metabolic, hematologic, ophthalmologic and ontologic, prenatal, and musculoskeletal disorders. The Health of Populations: Beyond Medicine uses current research and in-depth analysis to provide insights into the issues and challenges of population health; a subject of increasing concern, due largely to rapid population growth, population aging, rising costs and diminishing resources, health inequality, and the global rise in noncommunicable diseases. Reducing the global burden of disease requires prevention of disease incidence, which is achievable through reduction of exposure to primary (behavioral) and secondary (biomedical) risk factors. The 15 chapters of the book are divided into three sections that focus on the science of health, the harm of medicine, and how to achieve optimal health. By highlighting the benefits of preventing incidence of disease, this book illustrates how biomedicine needs to be repositioned from being the dominant approach in healthcare to being an adjunct to behavioral, legislative, social, and other preventive means for optimizing population health. Heavily evidence-based and thoroughly referenced with hundreds of scientific citations Contains a glossary, as well as valuable tables, illustrations, and information boxes to further explain core content Provides fresh perspectives on issues related to rapid population growth, population aging, rising costs, diminishing resources, health inequality, and more Carefully distills extensive tracts of information, clarifies misunderstandings, and rebuts myths with the ultimate goal of encouraging better understanding of the action needed to promote optimal health for all

University of California, San Diego. The National Medical Series for Independent Study. New edition of a concise, comprehensive outline of public health and preventive medicine, for medical students. Includes board-type questions and annotated answers. 16 U.S. contributors. The Forum that led to this volume was the thirteenth in an on-going annual series sponsored by the Applied Psychology Center (APC) at Kent State University. The resources and programs of the APC allowed for the prominent clinicians and scholars to attend the meeting and interact informally in the picturesque and relaxing atmosphere of the Inn at Honey Run in the heart of the Amish area of Northeast Ohio. This environment nurtured interaction among the participants for three days and permitted all to leave the Forum with ideas well beyond those presented in the text. We are grateful to the APC for facilitating this endeavor. The editors would especially like to acknowledge the on-going contribution of Kathy Floody, without whose help neither the Forum nor this book would exist. Kathy arranged for every detail of the Forum, from transportation plans, rooms, food, and drink, to scheduling of papers, discussions, and tours of the local area. Kathy compulsively reviewed all chapters for references, errors, and oversights and maintained a positive disposition and encouraging demeanor throughout the process. The success of the Forum was as much Kathy's doing, as it was the responsibility of the scholars who participated.
