

The International Symposium On Special Topics In Chemical Propulsion 3rd Non Intrusive Combustion Diagnostics

This book examines the interaction between art, design, technology and the social sciences. It features 56 papers that were presented at the International Symposium on Research of Arts, Design and Humanities, ISRADH 2014, held at Sutera Harbour Resort, Kota Kinabalu, Malaysia. Complete with helpful diagrams and tables, the papers cover such topics as artificial reef development, racial discourse in the social media, stoneware as a replacement material for modern ventilation walls, and factors contributing to internet abuse in the workplace. Overall, the coverage focuses on global design trends and demands with an emphasis on people, business and technology. Inside, readers will find information on art and science in industrial applications; art management and entrepreneurship; cognitive, psychological and behavioral science; design technology and sustainable development; humanities and social applications in quality of life; social implications of technology; and visual communication and technologies. Taking a multi-disciplinary approach, the book features insightful discussions among academicians and industrial practitioners on the evolution of design that will appeal to researchers, designers and students.

International Symposium on Special Topics in Chemical Propulsion (3rd): Non-Intrusive Combustion Diagnostics Held in Scheveningen, Netherlands on 10-14 May 93
Special Section on the International Symposium on Semiconductor Manufacturing
Organosilicon Chemistry
Special Lectures Presented at the International Symposium on Organosilicon Chemistry
Elsevier

Organosilicon Chemistry provides information pertinent to the fundamental aspects and application of organosilicon chemistry. This book discusses the exact manner and extent of d-orbital involvement in organosilicon compounds in ground, electronic, and transition excited states. Organized into two parts encompassing 21 chapters, this book begins with an overview of preparing stable organosiliconium ions. This text then discusses the use of fused salts as reaction media in the preparative chemistry. Other chapters consider a detailed investigation on the molecular association and volatility of alkoxides of group (IV) elements. This book discusses as well the reaction between dimethyldichlorosilane and ethylene glycon, which has been shown to produce a dimeric ten-membered ring compound. The final chapter deals with the results of the investigations concerning the properties of the contact mass and of the non-volatile silicon-free products, which are produced in the direct synthesis of phenylhalogenosilanes. This book is a valuable resource for chemists and research workers.
