A time to reflect on my seventy years of life. Maybe some folks will be interested in my life and the folks I have met, or maybe not. This is a non-traditional memoir, filled with alphabetical vignettes not chronological ones. I have made a foray into fiction with an asterisk: in those cases where I have marked the vignette as fictional, it might be 100 percent not true, but in many cases I knew of, was part of, or heard from others about the story itself. At any rate, the entire book is my recollection of things past, and as in all recollections, the more distant the memory the clearer the details.

Cancer sucks, death sucks even more. But we humans don't have the power to stop either of them from messing with our lives. They enter our lives whenever and wherever they choose to. Cancer is so common that each one of us have known someone who has dealt with the disease; some of us have lost a loved one to cancer. Common does not always mean simple, and it also does not mean we know everything about it. The diagnosis of cancer, regardless of the disease's curability, is almost always nerve-racking, even for healthcare providers like the main character of this book who is a veteran nurse. This book is written in first person; the subject is a middle aged woman who had been separated from her boyfriend some thirty years ago and then after three decades when she searches for an oncologist for treatment of an aggressive cancer that she was recently diagnosed, she finds her ex-boyfriend's name and decides to see him. That brings back the memory of their past together, and she starts going through her old diary she had written some thirty years in the past. Part of the story is set in Nepal (from the diary) and the other part is set in the USA ( this takes place after her

cancer diagnosis). The main character of the story was born with 'Manglik' cosmic influencer, meaning that the planet Mars "mangal Graha" was in such position in the solar system at the time of her birth that it would have strong negative effect on her husband if she married a man who was non-Manlik (a person born at the time when the planet Mars was not in such position.) What happens next changes the lives of the main characters.

legacy, Alexis works night and day to prove that she is more than just her last name. It's not only that she doesn't have time for love. She doesn't have the heart for it. After all, there's no point in starting something you can't finish. When she meets Adam, she's drawn to him in a way even she can't deny. The film student is dark and brooding and strangely charming. He's the perfect distraction from her mundane life. And, as if fate is pushing them together, he seems to be around every corner. It's enough to almost make her entirely forget about her past and take a chance. But Adam can recall every detail that she's forgotten. What she doesn't remember, he can't forget.

What if dreams are more than dreams? This magical realism novel is the first in a trilogy that is historical fiction, love story and spiritual quest. It is about magic and mysticism, faith and initiation. It is about the soul of art. Woven through history is a love story of many parts, remembered and built upon through the centuries. A great love passes on through generations in some undeniable memory in the flesh, and also reappears in new lives from distant places. Mystical love calls to couples throughout time to bring them together again and again. This remembering travels both ways in time, existing in that place beyond time where love lives. There are vague memories, subtle warnings and obscure communications between individuals separated by centuries. Lives weave together throughout more than five hundred years, paralleling contemporary events. Religious intolerance, fear and greed generate the Spanish Inquisition and the religious wars in Europe that reach a decisive moment with the defeat of the Spanish Armada. Ninety-six years earlier, in the same year that Ferdinand and Isabella sent the three ships that discovered the New World, Spain's power had begun to weaken with the expulsion of the Jews and Muslims. The wisdom and skills of the Islamic and Jewish citizens was what

## Online Library The Memory Code The Secrets Of Stonehenge Easter Island And Other Ancient Monuments

had helped make Spain what it was, but fear caused the end of that golden age. These two critical points in history and what follows are the setting for this novel, but other times are connected over many thousands of years. The story opens in Spain in the 15th Century, with Jewish, Islamic and Christian children playing together as innocents without prejudice or fear. Throughout the book, there is an underlying theme of Hope and Faith manifested in mystical ways. This faith lives in ancient Celtic traditions, as well as Jewish, Islamic and Christian forms, both Catholic and Protestant. Truth is truth, no matter what form it chooses to wrap itself inside. Love empowers many characters in various ways and transforms them into their best. The world of nature sometimes comes to their aid in miraculous ways, and enemies who are treated with love become allies. There are no greater mysteries than time and consciousness and the memories that connect us to the whole of our lives and beyond. The *deja vu* and vague precognitive experiences that all of us have felt to some degree are the tip of the iceberg of this mystery. The supernatural in our lives is often liberated by powerful emotions like love and fear. We all are familiar with stories about mothers who have sensed when their children are in danger or when a loved one is in crisis. There is an undeniable connection that doesn't fit neatly into our view of everyday physical life. There is a larger world we glimpse as we timidly awake. The author presents his perspectives and personal experiences on mentalism and how it can be used to tap into the mind's hidden powers.

The remarkable true story of a team of doctors who – through years of scientific sleuthing and observant care—discover a surprising connection between opioids and memory, one that holds promise and peril for any one of us. How could you lose your memory overnight, and what would it mean? The day neurologist Jed Barash sees the baffling brain scan of a young patient with devastating amnesia marks the beginning of a quest to answer those questions. First detected in a cluster of stigmatized opioid overdose victims in Massachusetts with severe damage to the hippocampus—the brain's memory center—this rare syndrome reveals how the tragic plight of the unfortunate few can open the door to advances in medical science. After overcoming initial skepticism that investigating the syndrome is worth the effort—and that fentanyl is the likely culprit—Barash and a growing team of dedicated doctors explore the threat that people who take opioids chronically as prescribed to treat severe pain may gradually put their memories at risk. At the same time, they begin to grasp the potential for this syndrome to shed light on the most elusive memory thief of all—Alzheimer's disease. Through the prism of this fascinating story, Aguirre goes on to examine how researchers tease out the fundamental nature of memory and the many mysteries still to be solved. Where do memories live? Why do we forget most of what happens in a day but remember some events with stunning clarity years later? How real are our memories? And what purpose do they actually serve? Perhaps the greatest mystery in *The Memory Thief* is why Alzheimer's has evaded capture for a century even though it afflicts tens of millions around the world and lies in wait for millions more.

Aguirre deftly explores this question and reveals promising new strategies and developments that may finally break the long stalemate in the fight against this dreaded disease. But at its core, Aguirre's genre-bending and deeply-reported book is about paying attention to the things that initially don't make sense—like the amnesic syndrome—and how these mysteries can move science closer to an ever-evolving version of the truth.

The Memory Code: The Secrets of Stonehenge, Easter Island and Other Ancient Monuments Simon and Schuster  
In this acclaimed book, renowned Harvard scholar Susan Rubin Suleiman discusses individual and collective memories of World War II, as reflected in literary memoirs, autobiographical novels, works of history and philosophy, and films. Suleiman argues that memories of World War II transcend national boundaries, due not only to the global nature of the war but also to the increasingly global presence of the Holocaust as a site of collective memory. Among the works she discusses are Jean-Paul Sartre's essays on the Occupation and Resistance in France; Marcel Ophuls's innovative documentary on the Nazi interrogator Klaus Barbie, who was tried for crimes against humanity in 1987; István Szabó's film "Sunshine," a chronicle of Jewish identity in central Europe; literary memoirs by Jorge Semprun and Elie Wiesel; and experimental writing by child survivors of the Holocaust, Georges Perec and Raymond Federman.

Our brain is a muscle. Like our bodies, it needs exercise. In the last few hundred years, we have stopped training our memories and we have lost the ability to memorize large amounts of information— something our ancestors could do with ease. After discovering that the true purpose of monuments like Easter Island and Stonehenge were to act as memory palaces, Kelly takes this knowledge and introduces us to the best memory techniques humans have ever

devised, from ancient times and the Middle Ages to methods used by today's memory athletes. A memory champion herself, Kelly tests all these methods and demonstrate the extraordinary capacity of our brains at any age. For anyone who needs to memorize a speech or a script, learn anatomy or a foreign language, or prepare for an exam, Memory Craft offers proven techniques and simple strategies for anyone who has trouble remembering names or dates, or for older people who want to keep their minds agile. In addition to getting in touch with our own human and anthropological foundations, Memory Craft shows how all things mnemonic can be playful, creative, and fun.

In the realm of mental phenomena, experiment and measurement have hitherto been chiefly limited in application to sense perception and to the time relations of mental processes. By means of the following investigations we have tried to go a step farther into the workings of the mind and to submit to an experimental and quantitative treatment the manifestations of memory. The term, memory, is to be taken here in its broadest sense, including Learning, Retention, Association and Reproduction. (PsycINFO Database Record (c) 2004 APA, all rights reserved).

In ancient, pre-literate cultures across the globe, tribal elders had encyclopedic memories. They could name all the animals and plants across a landscape, identify the stars in the sky and recite the history of their people. Yet today, most of us struggle to memorize more than a short poem. Using traditional Aboriginal Australian song lines as a starting point, Lynne Kelly has since identified the powerful memory technique used by our ancestors and indigenous people around the world. In turn, she has then discovered that this ancient memory technique is the secret purpose behind the great prehistoric monuments like Stonehenge, which have puzzled archaeologists for so long. The stone circles across Britain and northern Europe, the elaborate stone houses of New Mexico, huge animal shapes in Peru, the statues of Easter Island - these all serve as the most effective memory system ever invented by humans. They allowed people in non-literate cultures to memorize the vast amounts of information they needed to survive. But how? For the first time, Lynne Kelly reveals the purpose of these monuments and their uses as 'memory places', and shows how we can use this ancient technique to train our minds.

You may remember visiting a grandparent or elder friend who lived in a nursing home memory unit. When you were a child you may recall sights, sounds, and smells that caused you to feel uneasy. Step into any one of today's 16,000 long-term care facilities across the US, and suddenly those memories reemerge. Nurse Supervisor K. Allen tells of the emotional investments found while working with seniors inside the Van Gogh, a large upscale urban assisted living complex.
