This book emphasizes the integral connections between imagination, creativity, and spirituality and their role in healing. First, the author highlights the work of a neglected yet important psychoanalyst, Marion Milner - a painter and undeclared mystic - expanding her work on creativity, mysticism, and mental health. Second, she explores imagination and creativity as expressed in fostering hope and in spiritually-oriented therapies, particularly for mood, anxiety, and eating disorders - offering practical application of studies in imagination and the arts. Raab Mayo concludes that both creativity and the potential for transcendence are inherent in the human psyche and can work as allies in the process of recovery from mental illness.

This book was the first to specifically address the impact of religion and spirituality on mental illness.

Fasting An Exceptional Human Experience Since prehistory, fasting has been used in various ways as a means of transformation. As a spiritual practice, it is the oldest and most common form of asceticism and is found in virtually every religion and spiritual tradition. In psychology, studies have suggested that fasting can alleviate the symptoms of some psychiatric conditions, including depression and schizophrenia. In medicine, fasting is one of the most promising therapies, with research suggesting that fasting can cause certain drugs, such as chemotherapy, to work better while reducing drug side-effects. Hunger striking, sometimes called political fasting, may be the most powerful application of fasting. Proof of this occurred in 1948 when Gandhi's hunger strike caused millions of Hindus and Muslims in India to cease their fighting. As a practical guide, Randi Fredricks, Ph.D. provides detailed information on the different types of fasting, where people fast, the physiological process of fasting, and the contraindications and criticisms of fasting. Using existing literature and original research, Dr. Fredricks focuses on the transformative characteristics of fasting in the contexts of psychology, medicine, and spirituality. The relationship between fasting and transpersonal psychology is examined, with a focus on peak experiences, self-realization, and other exceptional human experiences. Dr. Fredricks demonstrates how fasting can be profoundly therapeutic, create global paradigm shifts, and provide personal mystical phenomena.

This book offers a clinical guide that brings together a broad range of brief interventions and their applications in treating psychosis. It describes two core approaches that can narrow the current, substantial gap between the need for psychotherapeutic interventions for all individuals suffering from psychosis, and the limited mental health resources available. The first approach involves utilizing the standard therapeutic modalities in the context of routine clinical interactions after adapting them into brief and effective formats. To that end, the book brings in experts on various psychotherapeutic modalities, who discuss how their particular modality could be adapted to more effectively fit into the existing system of care delivery. The second approach, addressed in detail, is to extend the availability of these brief interventions by utilizing the circle of providers as well as the social circle of the clients so that these interventions can be provided in a coordinated and complementary manner by psychiatrists, psychologists, clinical social workers, case managers, peer support specialists and other providers on the one hand, and by family members, friends, social and religious institutions on the other.

Have you ever thought about how self-consciousness (self-awareness) originated in the universe? Understanding consciousness is one of the toughest "nuts to crack." In recent years, scientists and philosophers have attempted to provide an answer to this mystery. The reason for this is simply because it cannot be confined to solely a materialistic interpretation of the world. Some scientific materialists have suggested that consciousness is merely an illusion in order to insulate their worldviews. Yet, consciousness is the most fundamental thing we know, even more so than the external world since we require it to perceive or think about anything. Without it, reasoning would be impossible. Dr. Scott Ventureyra, in this ground-breaking book, explores the idea of the Christian God and Creation in order to tackle this most difficult question. He demonstrates that theology has something significant to offer in reflection of how consciousness originated in the universe. He also makes a modest claim that the Christian conception of God and Creation provide a plausible account for the origin of self-consciousness. He integrates philosophy, theology, and science in an innovative way to embark on this exploration.

The loss or lack of interest in sex is a common complaint in sex therapy. Organized around in-depth case presentations, this book showcases effective treatment approaches for individuals and couples. Concise chapter introductions by editor Sandra R. Leiblum summarize key themes and provide a context for understanding each author's approach.

Have you ever thought that there might be something wrong with human beings, even that we might be slightly insane? Why is it that so many human beings are filled with a restless discontent, and an insatiable desire for material goods, status and power? Why is it that human history has been filled with endless conflict, oppression and inequality? In this ground-breaking and inspiring book, Steve Taylor shows that we do suffer from a psychological disorder, which he refers to as *humania*, or *ego-madness*. This disorder is so close to us that we don't realize it's there, but it's the root cause of all our dysfunctional behaviour, both as individuals and as a species. This book explains the characteristics of *humania*, where it stems from and how it leads to the madness of materialism, status-seeking, warfare, inequality and other symptoms of our insanity. But equally importantly, *Back to Sanity* shows how we can heal this mental disorder and allow the fleeting moments of harmony that we all experience from time to time to become our permanent state of being. Celebrates and instructs in the healing power of breath.

New and enlarged edition. *Transpersonal Psychology* concerns the study of those states and processes in which people experience a deeper sense of who they are, or a greater sense of connectedness with others, with nature, or the spiritual dimension. Pioneered by respected researchers such as Jung, Maslow and Tart, it has nonetheless struggled to find recognition among mainstream scientists. Now that is starting to change. Dr. Michael Daniels teaches the subject as part of a broadly-based psychology curriculum, and this new and enlarged edition of his book brings together the fruits of his studies over recent years. It will be of special value to students, and its accessible style will appeal also to all who are interested in the spiritual dimension of human experience. The book includes a detailed 38-page glossary of terms and detailed indexes.

This book is the first to address what really happens behind closed doors during eating disorders treatment, as most writing has only addressed theoretical approaches and behavioral strategies. The field has long needed a book that describes the heart of the matter: the therapeutic interventions and interactions that comprise life-changing treatment for this life-threatening disorder. In response to this need, the authors have created a book that reflects the individual therapeutic skills and the collective wisdom of senior clinicians, all of whom have years of experience treating anorexia, bulimia, and binge eating disorder. Intended to be a deeply thoughtful and instructive volume, *Effective Clinical Practice in the Treatment of Eating Disorders: The Heart of the Matter* demonstrates the depth, complexity, and impact of the therapeutic process. In particular, the book articulates and explores essential points of information, issues, insights and unresolved questions about eating disorders treatment. *Effective Clinical Practice in the Treatment of Eating Disorders* describes and explicates important treatment issues and themes in a nuanced, highly contextualized and qualitative manner. The book offers a significant reference for both novice and seasoned therapists, and it includes specific information that will serve to inform and mentor future generations of eating disorders clinicians.

Personal stories of spiritual crises are presented alongside practical and effective guidance in this exploration of a fascinating phenomenon. When spiritual emergencies, such as mystical psychosis and dark nights of the soul, are understood, managed, and integrated, they can offer enormous potential for growth and fulfillment, and this book offers three key phases for successful navigation. Encouraging, supportive, and life-saving, this resource is essential for avoiding the mental, emotional, or spiritual paralysis or exhaustion that can result from underestimating the current age of increased individual and global emergencies. This text provides an introduction to gerontological counseling, integrating the basic skills of working with older adults with theories of counseling and aging. Specific counseling issues discussed include mental health counseling, career counseling, rehabilitation counseling, and family counseling. Along with these, important contextual factors such as race/culture, social class, social justice, spirituality, Alzheimer's and other dementias, and family issues are considered in light of the latest research. Each chapter contains case studies, discussion questions, a glossary, and suggestions for further reading to reinforce the material presented.
