Self and identity have been important yet volatile notions in psychology since its formative years as a scientific discipline. Recently, psychologists and other social scientists have begun to develop and refine the conceptual and empirical tools for studying the complex nature of self. This volume presents a critical analysis of fundamental issues in the scientific study of self and identity. These chapters go much farther than merely taking stock of recent scientific progress. World-class social scientists from psychology, sociology and anthropology present new and contrasting perspectives on these fundamental issues. Topics include the personal versus social nature of self and identity, multiplicity of selves versus unity of identity, and the societal, cultural, and historical formation and expression of selves. These creative contributions provide new insights into the major issues involved in understanding self and identity. As the first volume in the Rutgers Series on Self and Social Identity, the book sets the stage for a productive second century of scientific analysis and heightened understanding of self and identity. Scholars and advanced students in the social sciences will find this highly informative and provocative reading. Dr. Richard D. Ashmore is a professor and Dr. Lee Jussim is an associate professor in the Department of Psychology at Rutgers University, New Brunswick, New Jersey.

Explores the possibilities for the therapeutic process of adopting a social constructionist perspective. Topics covered in this text include the theoretical basis for social constructionist therapy, and various approaches in practice, such as irreverent therapy and the not-knowing therapist.

The ethical dimensions of health communicators' interventions and campaigns are brought into question in this thought-provoking book. Examining the efforts to effect behavior change, the author questions how far health communication can and should go in changing people's values. The author broadens the current analysis of interventions and presents conceptual frameworks that help identify values and justifications that are embedded in health communication goals, strategies, and evaluation criteria. This critical approach helps explain how and why choices are made in design and implementation, and provides constructs and frameworks to examine them. It also widens the criteria for program evaluation and policymaking, and provides practitioners, planners, policy-makers, researchers, and students with practice-

oriented questions.

We fall in love every day, with others, with ideas, with ourselves. Stories of love excite us and baffle us. This volume is about love and the networked self. It focuses on how love forms, grows, or dissolves. Chapters address how relationships of love develop, are sustained or broken up through technologies of expression and connection. Authors explore how technologies reproduce, reorganize, or reimagine our dominant rituals of love. Contributors also address what our experiences with love teach us about ourselves, others, and the art of living. Every love story has a beginning and an end. Technology does not give love the kiss of eternity; but it can afford love new meaning. This reader introduces a number of important viewpoints central to social constructionism and charts the development of social constructionist thought.

By theorizing subjectivity according to the dialogic model of Mikhail Bakhtin, author Roxanne J. Fand posits a moderating self-narrator who, rather than imposing a single authoritarian voice of fixed ideology and identity, negotiates among diverse internalized voices of one's social-ecological milieu.

This latest book by one of the world's leading protagonists in the field will be welcomed not just by psychologists but by students, academics and professionals interested in social constructionism across a wide range of subjects. *Social Construction in Context* explores the potentials of social constructionist theory when placed in diverse intellectual and practical contexts. It demonstrates the achievements of social constructionism, and what it can now offer various fields of inquiry, both academic, professional and applied, given the proliferation of the theory across the social sciences and humanities. First order issues of concern within the academic world, objectivity, truth, power and ideology, are now being augmented by widespread developments in practice - therapeutic, pedagogical, organizational and political. This book looks closely at these developments and examines both the positive potentials and limitations of social constructionist theory when applied to a variety of domains. It has been written in an accessible and scholarly manner making it suitable for a wide-ranging readership. "Remains an authoritative overview of the field, but is now markedly more accessible. It will be invaluable to students and scholars looking for a sustained and engaging inquiry into the premises and practices of social constructionism." - Dr Matthew Adams, University of Brighton "Kenneth Gergen elegantly presents his constructionist ideas in a style that is both relational and inviting, and, at the same time, comprehensive and thorough. By tracing the history of his ideas, he provides a blueprint for others to follow by including further reflections and additional references. Dr Gergen once again has paved the way for innovative, relational, and ethical ways of thinking about pedagogy, research and practice. I strongly recommend this outstanding book for child and youth care practitioners, social workers, counselors, mediators and psychologists." - Marie Hoskins, Professor, School of Child and Youth Care, Faculty of Human and Social Development, University of Victoria "This aptly titled book provides an accessible theoretical introduction to social constructionism applicable to numerous fields: therapy, education, research. As a teacher of Family Therapy, this book provides a foundation for understanding social constructionist therapy models and research and adds depth to my students understanding of these models." - Kevin Lyness, Antioch University Reflecting the significant developments in constructivist thought and practice, the Second Edition of *An Invitation to Social Construction* has been thoroughly revised and updated with material on major new areas such as discourse analysis, action research, the body and environmentalism. While still preserving the celebrated wide-ranging and profound approach of the first, the Second Edition, now with pedagogical features throughout, is even more accessible for students.

Measurement-based assessment has dominated our educational systems at the expense of the learning and the well-being of students and teachers. In this book, Gergen and Gill propose a radical alternative to this broken system, which is based instead on an inspirational conception of schools as sites of collective meaning-making and a relational orientation to evaluation. The authors acknowledge that it is within the process of relating that the world comes to be meaningful for us, and equally, learning and well-being are embedded in relational process, which testing and grades undermine. Providing detailed illustrations using cases from pioneering schools around the globe at both the primary and secondary level, this book demonstrates how a relational orientation to evaluation in education can enhance learning processes, foster students' engagement and vitality relationships, and elevate the evaluation of teaching and the school as a whole. Featuring collaborative learning, dialogic pedagogy, and flexible curricula, relational evaluation truly speaks to the demands of a rapidly changing world.

Social networking has grown into a staple of modern society, but its continued evolution is becoming increasingly detrimental to our lives. Shifts in communication and privacy are affecting us more than we realize or understand. *Terms of Service* crystalizes this current moment in technology and contemplates its implications: the identity-validating pleasures and perils of online visibility; our newly adopted view of daily life through the lens of what is share-worthy; and the surveillance state operated by social media platforms—Facebook, Google, Twitter, and others—to mine our personal data for advertising revenue, an invasion of our lives that is as pervasive as government spying. Jacob Silverman calls for social media users to take back ownership of their digital selves from the Silicon Valley corporations who claim to know what's best for them. Integrating politics, sociology, national security, pop culture, and technology, he reveals the surprising conformity at the heart of Internet culture—explaining how social media companies engineer their products to encourage shallow engagement and discourage

dissent. Reflecting on the collapsed barriers between our private and public lives, Silverman brings into focus the inner conflict we feel when deciding what to share and what to "like," and explains how we can take the steps we need to free ourselves from its grip.

Combining a scholar's care and thoroughness with searing personal insight, Karp brings the private experience of depression into sharp relief, drawing on a remarkable series of intimate interviews with 50 depressed men and women. This important book pierces through the terrifying isolation of depression to uncover the connections linking the depressed as they undertake their personal journeys.

Benjamin Patrick Newton's translation of Cicero's *On Duties* is the most complete edition of a text that has been considered a source of moral authority throughout classical, medieval, and modern times. Marcus Tullius Cicero was a preeminent Roman statesman, orator, and philosopher who introduced philosophy into Rome, and through Rome, into Christendom and the modern world. *On Duties* was championed by important thinkers including Thomas Aquinas, Montesquieu, and Voltaire, and it was one of the earliest books printed on the Gutenberg press. The true significance of *On Duties* lies in its examination of several fundamental problems of political philosophy, the most important being the possible conflict between the honorable and the useful. The honorable encompasses the virtues of human beings, which include justice and concern for the common good. The useful refers to the needs of living beings, which includes certain necessities and concern for private good. Only by understanding the possible conflict between these two sides of human nature, Cicero declares, may we understand our duties to our community and to ourselves. This new edition of *On Duties* aims to provide readers who cannot read Latin but wish to study the book with a literal yet elegant translation. It features an introduction, outline, footnotes, interpretative essay, glossary, and indexes, making Cicero's thought accessible to a general audience.

This century has been characterized by a strong and pervasive belief in "certainty through science. " It is a belief that has been nurtured by philosophers, scientists, and governing bodies alike. And, where vocal reassurance has failed to convince, modern technology has more than compensated. It has, in effect, been a century in at last to be making significant headway toward objective which humankind seemed and enduring truth. Yet, as the century winds toward its conclusion, this optimistic belief has begun to confront a challenging array of attacks. Widespread signals of concern are increasingly evident, and in the philosophy of science little but remnants remain of the bold rationale that once promised truth through method. One now senses a profound alteration taking place in both the concept of knowledge and of science-an alteration that may prove to be as significant as the Copernican revolution, the emergence of Darwinism, or the development of Freudian theory. As a result of the latter transformations, humans are no longer seen as the center of the universe, as essentially different from animals, or as fully conscious of the wellsprings of their activity. In the present case, however, we confront the loss of the human capacity for objective knowledge.

Based on Stanford University psychologist Kelly McGonigal's wildly popular course "The Science of Willpower," *The Willpower Instinct* is the first book to explain the science of self-control and how it can be harnessed to improve our health, happiness, and productivity. Informed by the latest research and combining cutting-edge insights from psychology, economics, neuroscience, and medicine, *The Willpower Instinct* explains exactly what willpower is, how it works, and why it matters. For example, readers will learn:

- Willpower is a mind-body response, not a virtue. It is a biological function that can be improved through mindfulness, exercise, nutrition, and sleep.
- Willpower is not an unlimited resource. Too much self-control can actually be bad for your health.
- Temptation and stress hijack the brain's systems of self-control, but the brain can be trained for greater willpower
- Guilt and shame over your setbacks lead to giving in again, but self-forgiveness and self-

compassion boost self-control. • Giving up control is sometimes the only way to gain self-control. • Willpower failures are contagious—you can catch the desire to overspend or overeat from your friends—but you can also catch self-control from the right role models. In the groundbreaking tradition of *Getting Things Done*, *The Willpower Instinct* combines life-changing prescriptive advice and complementary exercises to help readers with goals ranging from losing weight to more patient parenting, less procrastination, better health, and greater productivity at work.

Human social interaction is varied, complex and always changing. How we perceive each other and ourselves, how individuals interact within groups, and how groups are structured--all these are the domain of social psychology. Many have doubted, however, that a full-fledged social psychology textbook can successfully be written from a Christian perspective. Inevitably, some say, when attempting to integrate theology and social psychology, one discipline must suffer at the expense of the other. Angela Sabates counters that thinking by demonstrating how these two disciplines can indeed be brought together in a fruitful way. She crisply covers key topics in social psychology, utilizing research that is well grounded in the empirical and theoretical literature, while demonstrating how a distinctively Christian approach can offer fresh ideas and understandings. Why doesn't our behavior always match what we say we believe? How and when are we most likely to be persuaded? What is the social psychology of violence? How reliable are eyewitness testimonies? Are racism and prejudice on the decline or are we just better at hiding them? Sabates draws out the implications of a Christian view of human persons on these and other central subjects within the well-established framework of social psychological study. This volume is for those looking for a core text that makes use of a Christian theological perspective to explore what the science of psychology suggests to us about the nature of human social interaction. In the Preface to the second edition, Gergen describes the significant movements taking place since the first edition was published over a decade ago. This fascinating and carefully reasoned book remains essential reading for psychologists, sociologists, philosophers of the social sciences and others seeking a fresh understanding of our concept of social knowledge.

It is both an ideal and an assumption of traditional conceptions of justice for liberal democracies that citizens are autonomous, self-governing persons. Yet standard accounts of the self and of self-government at work in such theories are hotly disputed and often roundly criticized in most of their guises. John Christman offers a sustained critical analysis of both the idea of the 'self' and of autonomy as these ideas function in political theory, offering interpretations of these ideas which avoid such disputes and withstand such criticisms. Christman's model of individual autonomy takes into account the socially constructed nature of persons and their complex cultural and social identities, and he shows how this model can provide a foundation for principles of justice for complex democracies marked by radical difference among citizens. His book will interest a wide range of readers in philosophy, politics, and the social sciences.

Richard J. Mouw is well known for his incisive views on the intersection of culture and Christianity and for his efforts to make the thought of major Dutch theologian Abraham Kuyper accessible to average Christians. In this volume Mouw provides the scholarly "backstory" to his popular books as he interprets, applies, expands on -- and at times even corrects -- Kuyper's remarkable vision for faith and public life. In thirteen essays Mouw explores and develops the Kuyperian perspective on key topics in Christian cultural discipleship, including public theology, sphere sovereignty, education, creation, and more. He deftly articulates an ecumenically enriched neo-Calvinist -- or "neo-Kuyperian" -- perspective that appropriates and contextualizes the ideas and insights of this important theologian and statesman for new challenges in Christian thought and service.

This book builds on two current developments in psychology scholarship and practice. The first centers on broad discontent with the

individualist tradition in which the rational agent, or autonomous self, is considered the fundamental atom of social life. Critique of individualism spring not only from psychologists working in the academy, but also from communities of therapy and counseling. The second, and related development from which this work builds, is the search for alternatives to individualist understanding. Thus, therapists such as Steve Mitchell, along with feminists at the Stone Center, expand the psychoanalytic tradition to include a relational orientation to therapy. The present volume will give voice to the critique of individualism, but its major thrust is to develop and illustrate a far more radical and potentially exciting landscape of relational thought and practice that now exists. Most existing attempts to build a relational foundation remain committed to a residual form of individualist psychology. The present work carves out a space of understanding in which relational process stands prior to the very concept of the individual. More broadly, the book attempts to develop a thoroughgoing relational account of human activity. In doing so, Gergen reconstitutes 'the mind' as a manifestation of relationships and bears out these ideas in a range of everyday professional practices, including family therapy, collaborative classrooms, and organizational psychology.

One of America's great philosophers says the time has come to reform philosophy. Putnam calls upon philosophers to attend to the gap between the present condition of their subject and the human aspirations that philosophy should and once did claim to represent. His goal is to embed philosophy in social life.

A robust discussion of common grace -- of great value to anyone interested in the relation of church and culture. Asking how Christians can account for the presence of goodness in a fallen world, Richard Mouw reinterprets the historic insights of Calvinism for life in the twenty-first century. Now available in paperback.

A timely essay collection on the development and influence of secular expressions of Buddhism in the West and beyond. How do secular values impact Buddhism in the modern world? What versions of Buddhism are being transmitted to the West? Is it possible to know whether an interpretation of the Buddha's words is correct? In this new essay collection, opposing ideas that often define Buddhist communities—secular versus religious, modern versus traditional, Western versus Eastern—are unpacked and critically examined. These reflections by contemporary scholars and practitioners reveal the dynamic process of reinterpreting and reimagining Buddhism in secular contexts, from the mindfulness movement to Buddhist shrine displays in museums, to whether rebirth is an essential belief. This collection explores a wide range of modern understandings of Buddhism—whether it is considered a religion, philosophy, or lifestyle choice—and questions if secular Buddhism is purely a Western invention, offering a timely contribution to an ever-evolving discussion. Contributors include Bhikkhu Bodhi, Kate Crosby, Gil Fronsdal, Kathleen Gregory, Funie Hsu, Roger R. Jackson, Charles B. Jones, David L. McMahan, Richard K. Payne, Ron Purser, Sarah Shaw, Philippe Turenne, and Pamela D. Winfield.

This book interprets popular American belief and sentiment about cities, suburbs, and small towns in terms of community ideologies. Based on in-depth interviews with residents of American communities, it shows how people construct a sense of identity based on their communities, and how they perceive and explain community problems (e.g., why cities have more crime than their suburban and rural counterparts) in terms of this identity. Hummon reveals the changing role of place imagery in contemporary society and offers an interpretation of American culture by treating commonplaces of community belief in an uncommon way--as facets of competing community ideologies. He argues that by adopting such ideologies, people are able to "make sense" of reality and their place in the everyday world. On the basis of a theologically grounded understanding of the nature of persons and the self, Jack O. Balswick, Pamela Ebstyn King and Kevin S. Reimer present a model of human development that ranges across all of life's stages: infancy, childhood, adolescence, young

adulthood, middle adulthood, elder adulthood. They do this by drawing on a biblical model of relationality, where the created goal or purpose of human development is to become a reciprocating self--fully and securely related to others and to God. Along the way, they provide a context for understanding individual development issues--concerns, tensions, worries or crises encountered by the self in the context of change. Awareness of these issues is most pronounced at developmental transitional points: learning to talk and walk, beginning to eat unassisted, going to school, developing secondary sexual physical features, leaving home, obtaining full-time employment, becoming engaged and then married, having a child for the first time, parenting an adolescent, watching children move away from home, retiring, experiencing decline in physical and mental health, and, finally, facing imminent death. Throughout, Balswick, King and Reimer contend that, since God has created human beings for relationship, to be a self in reciprocating relationships is of major importance in negotiating these developmental issues. Critically engaging social science research and theory, *The Reciprocating Self* offers an integrated approach that provides insight helpful to college and seminary students as well as those serving in the helping professions. Those preparing for or currently engaged in Christian ministry will be especially rewarded by the in-depth discussion of the implications for moral and faith development nurtured in the context of the life of the church.

This methods book will guide the reader through the process of conducting and producing an autoethnographic study through the understanding of self, other, and culture. Readers will be encouraged to follow hands-on, though not prescriptive, steps in data collection, analysis, and interpretation with self-reflective prewriting exercises and self-narrative writing exercises to produce their own autoethnographic work. Chang offers a variety of techniques for gathering data on the self—from diaries to culture grams to interviews with others—and shows how to transform this information into a study that looks for the connection with others present in a diverse world. She shows how the autoethnographic process promotes self-reflection, understanding of multicultural others, qualitative inquiry, and narrative writing. Samples of published autoethnographies provide exemplars for the novice researcher to follow.

Questioning the tradition of individual responsibility, this pioneering book also transforms the concept of responsibility by giving centre stage to the relational process rather than to the individual - replacing alienation and isolation with meaningful dialogue. The first three chapters are the editors' own contribution on relational responsibility - followed by their analysis of a challenging case study involving the issue of child sexual abuse. The next 14 chapters contain
