Developed for the International Association for Trauma Surgery and Intensive Care (IATSIC), the Manual of Definitive Surgical Trauma Care 5e is ideal for training all surgeons who encounter major surgical trauma on an infrequent basis. This new edition includes both an e-version, and also a microSD card containing over 20 operative videos. The increasing role of non-operative management (NOM) has been recognised, and the Military Module is substantially updated to reflect recent conflict experience. Unless dealing with injury regularly, few surgeons can attain and sustain the level of skill necessary for decision making in major trauma. This includes both the intellectual decisions and the manual dexterity required to perform all the manoeuvres needed for surgical access and control. These can be particularly challenging, and may be infrequently required, yet rapid access to and control of sites of haemorrhage following trauma can be life-saving surgical intervention. Many situations require specialist trauma expertise, yet often this is simply not on hand within the available time frame. Manual of Definitive Surgical Trauma

Care, Second Edition, is written by the editorial board of the DSTCTM, which is a short course focusing on the life-saving surgical techniques and surgical decision-making required for surgeons who deal with major surgical trauma on an infrequent basis. This course supplements the well-recognized and accepted American College of Surgeons' Advanced Trauma Life Support (ATLS®) course. This manual is published in association with IATSIC (the International Association for the Surgery of Trauma and Surgical Intensive Care), and is written by an Editorial Board of surgeons who belong to that society. IATSIC are broadening their reach and running more and more courses worldwide. This new second edition has been updated to incorporate all recent developments in this rapidly progressing area. It emphasizes how practical 'real-life' decisions on the care of the injured patient should be made and then covers in practical terms the surgical techniques required. Every aspect of surgical trauma care is covered, including: -the causation of injuries - aids rapid understanding of presented trauma; -the initial, pre-hospital and emergency department care of the patient - all of which may determine eventual outcome; -the resources required, both physical and intellectual, within the hospital to deal with the specific problems associated with patients with multiple injuries; the limitations in providing specialist expertise within the time frame required. It is an ideal practical manual for both trainees and qualified surgeons.

Grief and Trauma in Children provides easy-to-implement, ready-to-use therapy materials to help busy practitioners use grief and trauma interventions in real-world settings. All interventions in the book have been developed and researched with clinicians who faced challenging environments, including devastating natural disasters, and in communities where ongoing violence victimized children directly. Even in these stressful environments, clinicians found the interventions easy to implement, effective in helping children acquire coping skills, and effective in decreasing traumatic symptoms in order to proceed with grieving without impaired functioning. Grief and Trauma in Children blends cognitive-behavioral therapy methods and narrative practices to present an integrated grief and trauma model that can be delivered individually, to a group of children, or to a family. The book uses the Draw, Discuss, Write, Witness (DDWW) method to help children explore narratives of resilience and build coping capacity, engage in restorative stories about what happened, and reconnect and reengage in meaningful ways that allow the child to enjoy life

This is the first book to offer structured skills training for those suffering from dissociative disorders as a result of trauma. Boone, Steele, and van der Hart draw upon a practical integration of current and important theories and therapies for trauma and dissociation. There currently is a clear tendency to an increasing number of accidental injuries in elderly people, in sport injuries and car crashes also in countries which recently joined the European Union and candidates to join the European Union. Patients expect very good functional results even after serious injuries. But in contrast to this development, Trauma Surgery as an independent field, is not yet established in all European countries. Therefore, it seems mandatory to compile a book that covers the state-of-the-art in

Trauma Surgery. The book also serves to harmonise the practice of Trauma Surgery within the European Union, and to prepare for the exam of the U.E.M.S. Developmental Couple Therapy for Complex Trauma provides therapists with comprehensive and practical guidance for integrating DCTCT into their work with traumatized couples. The book includes an evidence-based framework which emphasizes the importance of containing conflict and helps clients to build emotional regulation and mentalizing skills. The framework is an invaluable asset to all clinicians working with couples dealing with the ravaging impacts of complex trauma, who may not be able to benefit from traditional forms of couple therapy due to challenges in regulating emotions, mentalizing and other aspects of the complex trauma response that limit capacity to engage in relationships and couple therapy. The chapters guide you through the four key stages of DCTCT: Psychoeducation, Building Capacity, Dyadic Processing, and Consolidation. Each stage has accompanying activities and narratives in which to engage traumatized couples and includes a variety of case transcripts to illustrate the approach. Throughout the manual the author provides the reader with: insights from real-world scenarios based on her extensive clinical experience; worksheets that can be used as part of the therapeutic process; systematic analyses of the therapeutic process from the therapist's point

of view; comprehensive recommendations for further reading so that you can develop your expertise in any area of DCTCT. Never losing sight of the fact that the therapist plays an essential role as a coach and mentor for those undertaking couple therapy, this manual is a valuable tool for any clinician working to engage traumatized couples and equip them with the skills they need to develop and maintain a strong and vibrant couple relationship. This is the first book exploring the unique dynamics created by a multidisciplinary trauma team and how crisis management strategies can improve teamwork and communication and, potentially, improve patient resuscitation outcomes. Crisis resource management (CRM) is integral to the way that we manage ourselves, team members, and patients during emergency situations. It is essentially the ability to translate knowledge of what needs to be done into effective actions during a crisis situation. Building on the revolutionary American College of Surgeons Advanced Trauma Life Support (ATLS®) course, Trauma Team Dynamics illustrates the integration of the principles of CRM to team dynamics throughout the resuscitation –from the scene, through pre-hospital care and transport, to the trauma bay, and finally to definitive care and beyond. The editors and contributors are international experts in trauma, critical care, emergency medicine, nursing, respiratory therapy,

and pre-hospital care and include NASA- and United States military-affiliated experts. Trauma Team Dynamics is intended for use as both a day-to-day clinical resource and a reference text, and includes self-assessment questions as well as guidance on CRM curriculum design and implementation.

Internal Family Systems Therapy (IFS) provides a revolutionary treatment plan for PTSD, anxiety, depression, substance abuse, eating disorders and more. Using a non-pathologizing, accelerated approach -- rooted in neuroscience -- IFS applies inner resources and self-compassion for healing emotional wounding at its core. This new manual offers straight-forward explanations and illustrates a wide variety of applications. Easy to read and highly practical. - Step-by-step techniques - Annotated case examples - Unique meditations - Downloadable exercises, worksheets IFS is Evidence-Based Thirty years ago, IFS creator Richard Schwartz, PhD, listened to his clients describing the behaviors and fears of their most extreme parts. He found that the inner world of all his clients was characterized by parts who had a positive intent for the client but had taken on extreme roles in an effort to be safe. He also discovered that these extreme parts would become less disruptive and more cooperative once their concerns were addressed and they felt safer. IFS views psychic multiplicity as the norm: we all have parts. In addition, every part has a good intention for the client, and every part has value. When clients listen to all their parts, they can heal their wounded parts. Today, IFS, which has established a legacy of efficiency and effectiveness in treating many mental health issues, is
