The Social Security Administration (SSA) administers two programs that provide disability benefits: the Social Security Disability Insurance (SSDI) program and the Supplemental Security Income (SSI) program. SSDI provides disability benefits to people (under the full retirement age) who are no longer able to work because of a disabling medical condition. SSI provides income assistance for disabled, blind, and aged people who have limited income and resources regardless of their prior participation in the labor force. Both programs share a common disability determination process administered by SSA and state agencies as well as a common definition of disability for adults: "the inability to engage in any substantial gainful activity by reason of any medically determinable physical or mental impairment which can be expected to result in death or which has lasted or can be expected to last for a continuous period of not less than 12 months." Disabled workers might receive either SSDI benefits or SSI payments, or both, depending on their recent work history and current income and assets. Disabled workers might also receive benefits from other public programs such as workers' compensation, which insures against work-related illness or injuries occurring on the job, but those other programs have their own definitions and eligibility criteria. Selected Health Conditions and

This report also identifies specific, long-lasting medical conditions for adults in the categories of mental health disorders, cancers, and musculoskeletal disorders. Specifically, these conditions are disabling for a length of time, but typically don't result in permanently disabling limitations; are responsive to treatment; and after a specific length of time of treatment, improve to the point at which the conditions are no longer disabling.

The fourth edition of *Developing Clinical Proficiency in Athletic Training: A Modular Approach* takes the skills that athletic training students need and organizes them into a modular system that will help students progressively develop while providing instructors with a systematic means of assessing their students' learning. The manual presents a flexible system consisting of three levels that are broken down into 146 modules used for assessing students' clinical skill development over the course of their athletic training program. The text is presented in such a way that it allows instructors to adjust the order of presentation of the modules while maintaining a complete record of the competencies achieved. Previously titled *Assessing Clinical Proficiencies in Athletic Training*, this latest edition guides students and clinical instructors through the maze of educational competencies required of entry-level athletic trainers. All of the current National Athletic Trainers' Association (NATA) Athletic Training Competencies are embedded in the text. Because it covers all the competencies, this workbook can be used in conjunction with any athletic training text. The

NATA competencies are noted in each module and are cross-referenced in an appendix. The following are new features of the fourth edition: -Coauthor Dr. Kirk Brumels joins author Ken Knight as a veteran clinic educator and a longtime user of the modular system. -The 26 new modules enhance the existing modules and improve the coverage of competencies from the previous edition. -Three new groups of modules are included: Developing Clinical Skill, The Body, and Professional Development.” -A new module, Foundational Behaviors of Professional Practice, has been added to all three levels to ensure that students and clinical instructors have an ongoing dialogue concerning these behaviors. In the fourth edition of Developing Clinical Proficiency in Athletic Training, the authors have reduced the number of levels from four to three and increased the number of modules in order to give instructors greater flexibility in adapting the text to their curriculums. They also have included more introductory material to help students and instructors better understand the integrated nature of athletic training education, and they discuss the nature of critical thinking and why it is essential to clinical practice. The text's unique concept allows for multiple evaluations of proficiencies in the classroom, laboratory, and clinical settings. Through the modules, students are given the opportunity to demonstrate mastery of clinical proficiencies as instructors gauge their competencies across multiple
