The life force, also known as "spirit," is the essence of being and the conscious and most important form of energy. Living energy is personal and within our conscious control, and by learning about it, we can use it to transform our life into vibrant and meaningful expressions of who we really are. Consciousness is purely energetic and therefore difficult to quantify in mechanistic terms. It is the characteristic of living energy and is the foundation of awareness. Consciousness is the thread running through all life. Living Energy is an introduction to the process of mystic spirituality. The reader is encouraged to attain a deep and meaningful connection to the divine with expanded awareness. The principles given in this book are equally relevant to the novice and the advanced practitioner. Robert explains how we may reveal our hidden potential by shifting our perception away from what is customary and comfortable to open the doors to greater spiritual awareness.

RADIUS, the sequel to the best selling business book Third Circle Theory (which since 2013 has sold well over 300,000 copies worldwide) continues on Secret Entourage's mission to bring meaningful business education to the masses. As more and more people embark on the idea that small business ownership and Entrepreneurship may be the only path of finding monetary and personal success in a very crowded and ever evolving global economy, it only made sense for me to create a powerful blueprint that would highlight all aspects of business mastery. Written from a universal lens, RADIUS helps readers understand the powerful 5 entrepreneurial pillars that every business in every industry worldwide falls under. From the idea phase, to the birth of a product or service, to understanding the revenue model of a business, to the start of the brand which eventually when re-used and recycled can lead to a very robust empire. The 5 pillars of RADIUS are the checkpoints that each and every business has an opportunity to cross but very few do. By understanding the mechanics behind each and every one of them, the reader is able to literally understand how far along their business is and how prepared they are to take the next step. This incredible new system breaks down the processes and most important concepts behind each pillar such as "how to ensure you are pursuing the correct idea," how to understand the pricing and revenue models of a business," "how to penetrate an audience through the REACH model," and "how to recycle resources and customers to create multiple profitable verticals as fast as possible," and many more. All of these concepts are presented in the form of processes that can be universally applied across the spectrum of any business, and at any given time in its life cycle. The entire RADIUS concept was created from 20] years of successful business experiences that I accumulated. RADIUS will break down for you not only all these important business concepts, but also give you an inside look into my very own companies and how I effectively used this very same system to scale my businesses to over 50M in revenue across multiple unrelated industries, which today allow me a chance to manage over a dozen companies without working on any logistical aspects of any of my businesses. I am sure that experiencing the RADIUS model will you help you tweak and change every aspect of your business that has been silently keeping you from achieving the greater vision that you once knew was possible. I hope you enjoy the journey, and the learning as much as you will one day enjoy the rewards of your business. A special thank you to Fabio Viviani, world famous chef who gracefully wrote the foreword to RADIUS and to all of you who have helped support Secret Entourage, Third Circle Theory and the idea that the best way to re-balance wealth in the world isn't to redistribute it but rather to create more opportunities for people to create their own.

Alexis de Tocqueville may be the most influential political thinker in American history. He also led an unusually active and ambitious career in French politics. In this magisterial book, one of America's most important contemporary theorists draws on decades of research and thought to present the first work that fully connects Tocqueville's political and theoretical lives. In doing so, Sheldon Wolin presents sweeping new interpretations of Tocqueville's major works and of his place in intellectual history. As he traces the origins and impact of Tocqueville's ideas, Wolin also offers a profound commentary on the general trajectory of Western political life over the past two hundred years. Wolin proceeds by examining Tocqueville's key writings in light of his experiences in the troubled world of French politics. He portrays Democracy in America, for example, as a theory of discovery that emerged from Tocqueville's contrasting experiences of America and of France's constitutional monarchy. He shows us how Tocqueville used Recollections to reexamine his political commitments in light of the revolutions of 1848 and the threat of

socialism. He portrays The Old Regime and the French Revolution as a work of theoretical history designed to throw light on the Bonapartist despotism he saw around him. Throughout, Wolin highlights the tensions between Tocqueville's ideas and his activities as a politician, arguing that--despite his limited political success--Tocqueville was "perhaps the last influential theorist who can be said to have truly cared about political life." In the course of the book, Wolin also shows that Tocqueville struggled with many of the forces that constrain politics today, including the relentless advance of capitalism, of science and technology, and of state bureaucracy. He concludes that Tocqueville's insights and anxieties about the impotence of politics in a "postaristocratic" era speak directly to the challenges of our own "postdemocratic" age. A monumental new study of Tocqueville, this is also a rich and provocative work about the past, the present, and the future of democratic life in America and abroad.

For 40 years, Lamborghini has been one of the world's most flamboyant and exotic car marques. Written by a long-term Lamborghini insider, the book tells, for the first time, the real story of the men who kept the Italian company alive, making cars bought by wealthy business executives, show business celebrities, and sports stars. Custodians of Lamborghini have included Chrysler and businessmen in Switzerland and Asia. Now Lamborghini sits alongside Bugatti at Audi, part of the Volkswagen Group. Previous Lamborghini books have been little more than collections of pictures of the cars and technical descriptions, but this one describes the character of the men whose passion for Lamborghini kept the company alive. The book is published in 2004 as the all-new Lamborghini Gallardo goes on sale, 41 years after the original 350GTV burst onto the scene at the Turin auto show.

If you look up "communication gap" in the dictionary, it may as well have a picture of a baby boomer trying to talk to a millennial. These younger workers born from 1980 to 2000 are the largest population in the United States, and they make up a huge portion of the workforce. But all too often, older workers view millennials as entitled or unmotivated. Javier Montes puts those notions to rest in this guide to leveraging the talents of millennials to achieve business objectives. By investing time and effort into training and developing millennials, he's built multiple companies while learning new things along the way. After reading this book, you'll be equipped to: improve the way you attract, manage, and retain millennials; use technology to make business processes more efficient; thrive in a world built around instant gratification; and reward younger workers with what they value most.

The inspirational bestseller that ignited a movement and asked us to find our WHY Discover the book that is captivating millions on TikTok and that served as the basis for one of the most popular TED Talks of all time—with more than 56 million views and counting. Over a decade ago, Simon Sinek started a movement that inspired millions to demand purpose at work, to ask what was the WHY of their organization. Since then, millions have been touched by the power of his ideas, and these ideas remain as relevant and timely as ever. START WITH WHY asks (and answers) the questions: why are some people and organizations more innovative, more influential, and more profitable than others? Why do some command greater loyalty from customers and employees alike? Even among the successful, why are so few able to repeat their success over and over? People like Martin Luther King Jr., Steve Jobs, and the Wright Brothers had little in common, but they all started with WHY. They realized that people won't truly buy into a product, service, movement, or idea until they understand the WHY behind it. START WITH WHY shows that the leaders who have had the greatest influence in the world all think, act and communicate the same way—and it's the opposite of what everyone else does. Sinek calls this powerful idea The Golden Circle, and it provides a framework upon which organizations can be built, movements can be led, and people can be inspired. And it all starts with WHY.

Traditional beliefs about meeting goals are fundamentally flawed. Goal setting tactics assume goals are measurable, achieved, and final-all attributes that describe objectives, not goals. Unlike objectives, which are by their very nature self-contained, goals are immeasurable. A goal is realized, not achieved, and must be maintained to remain successful. What good is the goal of losing weight if you don't keep the weight off? Losing twenty pounds is an objective. Keeping that twenty pounds from returning is a goal, which must be maintained to remain a success. In Three Your Life, entrepreneur and accidental expatriate David R. Sanders applies this important distinction between goals and objectives. Beginning with attitude, outlook, and perception, Sanders builds a solid foundation on which to effect major life changes. Learn to differentiate between needs, wants, and desires-and discover how focusing on desires causes everything else to fall into place. To realize desires, Sanders reevaluates conventional thinking on prioritizing tasks, using a three-part daily structure that ensures you're working toward a productive and fulfilling life. A fresh new approach to goal setting, Three Your Life offers the opportunity to realize your goals, achieve your objectives, and understand the difference between the two. In today's world, the media glamorizes startups able to raise tons of money in seed funding from investors. While this has helped inspire more people to launch businesses, I believe it has also fueled the notion that tons of funding is needed in order to actually start.Well folks...I'm here to tell youthat this is simply NOT TRUE. This flawed belief is the exact reason why Branden Hampton and I wrote this book.The quintessential book for those about to start their business.

"This is one of the best self-help books I've read. It actually made sense and addressed what it said it would do, which in my opinion is a rarity in these types of books. Like any self-help book, you must read it smart and not take everything the author says as gospel, but see how much of it really applies to what you are looking for. I highly recommend it for anyone hanging on to a lot of old hurts and struggling to get past certain portions of their life. If you have 'stuff' back there that is hindering the here and now, then I highly suggest it.- Audrey, August 2015 Live the life of happiness, peace and fulfilment that you deserve. The television series SPACE: 1999 was in its first series shaped by the late sixties and early seventies counterculture movements, making SPACE: 1999 into an example of how certain SF scholars see a natural alignment between science fiction and critical theory. However, due to changes in the political climate, SPACE: 1999 went through an ideological reversal in its second series. As a result, the schizophrenic nature of the series has ever since caused debate. This book is written on an idealistic basis. It is sold at the lowest price the publisher was willing to accept. It is commonly believed that some approaches of structural semiotics, narratology and cognitive science have not yet succeeded in constructing a complete and coherent theory of literary character. The author argues that the primary explanation of the failure is the artificial separation between characters and their actions. One of the chief implications of such separation is treating characters in terms of structures, agents, actants, functions, roles, and signs, which obviously mean that actions can hardly be explained as intended, motivated, performed and experienced. Survival, as a motivation-based concept, is one of the key concepts making the separation between character and action something impossible. Humans in literary narratives search for survival as an aware process of knowing and meaning making. Meaning in literary narratives can be produced by heroizability, which treats literary characters as living anthroposemiotic entities aware of their natural motivation to achieve in order to survive and produce meanings of their survival. As such, characters in literary narratives have active cognitions, and their cognitive activities remain meaningless without a process of semiosis. Applying Anthroposemiotic theory with Modeling System Theory, heroizability provides methodical tools to explain how the narrative text is represented and, thus, how it is to be interpreted properly by the reader not only to find, but also to make meaning in narrative world.

Do you feel like you struggle to make time for everything? We are living in a time-poor society, working more than ever and with less time for ourselves and family. The pressures and stress of the obligations we feel we have, often leave us without time to do everything that we would like to. More critically, we lack the time to reflect, review our lives and consider our direction. Time to contemplate if the decisions we are making are going to lead us to a life of purpose or an old age filled with regret. Time for Anything is based on 5 years of research by Craig D Robinson. Using the techniques in this book, Craig went from working in an entry level position to, in just four years: start 2 companies, recharge with 12 weeks holiday a year, start a family, grow and sell his startups and retire at the age of 34. This book shows you how you too can have time for it all.

The Routledge Encyclopedia of Film Theory is an international reference work representing the essential ideas and concepts at the centre of film theory from the beginning of the twentieth century, to the beginning of the twenty-first. When first encountering film theory, students are often confronted with a dense, interlocking set of texts full of arcane terminology, inexact formulations, sliding definitions, and abstract generalities. The Routledge Encyclopedia of Film Theory challenges these first impressions by aiming to make film theory accessible and open to new readers. Edward Branigan and Warren Buckland have commissioned over 50 scholars from around the globe to address the difficult formulations and propositions in each theory by reducing these difficult formulations to straightforward propositions. The result is a highly accessible volume that clearly defines, and analyzes step by step, many of the fundamental concepts in film theory, ranging from familiar concepts such as 'Apparatus', 'Gaze', 'Genre', and 'Identification', to less well-known and understood, but equally important concepts, such as Alain Badiou's 'Inaesthetics', Gilles Deleuze's 'Time-Image', and Jean-Luc Nancy's 'Evidence'. The Routledge Encyclopedia of Film Theory is an ideal reference book for undergraduates of film studies, as well as graduate students new to the discipline.

Public funding for community colleges has been steadily declining since the peak of funding in the 1970s. Surviving the constant threats of budgetary cuts has been a key motivating factor for community colleges to embrace academic entrepreneurialism. I examined the academic entrepreneurial pursuits of one California Community College (CCC) to understand those factors that encourage community college faculty to pursue academic entrepreneurial solutions. The purpose of this qualitative study is to examine factors that encourage academic entrepreneurialism among community college faculty. Specifically, I investigated three categories of factors that influence academic entrepreneurialism: individual, institutional, and environmental. Individual factors include demographic and background characteristics, including age, race, gender, academic training, and previous professional careers. Institutional factors include program offerings available for students, institutional reputation and history, institutional policies and practices, and academic and administrative leadership. Environmental factors relate to the peer influences of a campus that encourages academic entrepreneurial behavior of faculty. The significance of this study lies in the identification of factors that encourage academic entrepreneurialism among community college faculty, ultimately supporting institutional efforts to augment funding. I investigated individual, institutional, and environmental factors that encourage academic entrepreneurialism among community college faculty. Accordingly, the research questions identify key factors that encourage academic entrepreneurialism among community college faculty and explain how they facilitate faculty to engage in academic entrepreneurialism. The research questions that I evaluated in this study are: What individual, institutional, and environmental factors influence community college faculty to engage in academic entrepreneurialism? What is the relationship between faculty background, institutional, and environmental characteristics and the frequency and quality of academic entrepreneurialism among community college faculty? I found that all three factors are essential elements of academic entrepreneurialism among community college faculty. Individual, institutional, and environmental factors consist of people who are all pursuing their self-interest. This follows the tenets of rational choice theory as the study finds that self-interest influences faculty academic entrepreneurialism. The study argues that changes to institutional policies are the key determining factor to encourage academic entrepreneurialism among community college faculty. Institutional policies determine how a college functions and understands the interrelationship between individual, institutional, and environmental factors. Encouraging academic entrepreneurialism among community college faculty requires institutional policies that focus on the fundamental issue: recruiting, retaining, and evaluating community college faculty. The study offers suggestions for how to influence institutional policies that in turn encourage faculty academic entrepreneurialism by addressing the following areas: faculty job descriptions, faculty job

announcements, evaluating faculty levels of academic entrepreneurialism, and offering entrepreneurial faculty financial incentives.

A book about the life and time of a preacher's kid who goes through life lost, even though she has grown up in church. Church is not really what she focused on throughout life. As a girl, I paid more attention to all the boys. As a woman had struggled with drugs, men, more drugs and all kinds of non-spiritual things that were not of God. In the end, it all comes to a climatic end with abuse, betrayal and a way of escape at the cost of almost losing her daughter.

As suggested by the title, the book is divided into two major parts, microwave circuit theory, which includes chapters 1-9, and microwave metrology which comprises the remainder. The introductory chapters (primarily Chapter 2) are intended to provide a simplified outline of the theoretical basis for microwave (as contrasted with low frequency) circuit theory. These are based to a large degree upon the prior work of D.M. Kerns, whose example of careful formulation has been a source of unending challenge and inspiration to the author. Following this, the focus shifts to a development of the scattering notation, and where special attention is given to those features which make microwave metrology different from its lower frequency counterpart. The second part of the book describes the different experimental strategies which have been devised to measure the parameters associated with the microwave model. From one perspective, some of these are now 'obsolete' by virtue of the introduction of the automated network analyzer. On the other hand, for the serious student of metrology, the strategies are of continued interest even if the methods by which they were implemented are not. In the author's experience, an intuitive mental picture of the system operation can be an invaluable asset, although never a substitute for a careful analytical formulation. An example is the tuned reflectometer. Although for most applications the method is obsolete, an understanding of the associated theory can still provide useful insights into the microwave circuit model, and the operation of other measurement techniques.

If You Knew What Can Happen In The Next 52 Mondays It Would Take Your Breath Away" Stop and think about it. If you had started something new and worked on it every week since one year ago, what might you have been able to accomplish? Twelve months, after all, is plenty of time to start accruing success.

The book illustrates how Darwin's theory has evolved, about the development of the biological world before Darwin, and great changes that took place with the incorporation of statistics, and after Darwin's death of genetics and mathematics. The formation of 'Modern Synthesis', protein electrophoresis, Discovery of DNA opened new avenues for the study of evolution.
