Dr. Greg Zacharias, former Chief Scientist of the United States Air Force (2015-18), explores next steps in autonomous systems (AS) development, fielding, and training. Rapid advances in AS development and artificial intelligence (AI) research will change how we think about machines, whether they are individual vehicle platforms or networked enterprises. The payoff will be considerable, affording the US military significant protection for aviators, greater effectiveness in employment, and unlimited opportunities for novel and disruptive concepts of operations. *Autonomous Horizons: The Way Forward* identifies issues and makes recommendations for the Air Force to take full advantage of this transformational technology. "Marshall, Skye, Rubble and the rest of Nickelodeon's heroic pups share all the special things they are thankful for"--

So after a good, soapy scrub, the penguins dive back into the deep blue sea, happily dressed only in their own penguin feathers.

Spectroscopy of Polymer Nanocomposites covers all aspects of the spectroscopic characterization of polymer nanocomposites. More than 25 spectroscopy characterization techniques – almost all used in materials science – are treated in the book, with discussion of their potentialities and limitations. By comparing the techniques with each other and presenting the techniques together with their specific application areas, the book provides scientists and engineers the information needed for solving specific problems and choosing the right technique for analyzing the material structure. From this, the dispersion structure of fillers, property relations and filler-polymer interactions can be determined, and, ultimately, the right materials can be chosen for the right applications. Besides the techniques and structure-property relations, aspects covered include: phase segregation of filler particles, filler agglomeration and deagglomeration, filler dispersion, filler-polymer interactions, surfaces and interfaces. The book also examines recent developments, as well as unresolved issues and new challenges, in the characterization of surfaces and interfaces in polymer nanocomposites. This handpicked selection of topics, and the combined expertise of contributors from industry, academia, government and private research organizations across the globe, make this survey an outstanding reference source for anyone involved in the field of polymer nanocomposites in academia or industry. Provides comprehensive coverage of spectroscopy techniques for analyzing polymer nanocomposites Enables researchers and engineers to choose the right technique and make better materials decisions in research and a range of industries Presents the fundamentals, information on structure-property relations, and all other aspects relevant for understanding spectroscopic analyses of nanoreinforced polymers and their applications

The dazzling success of *The Toaster Project*, including TV appearances and an international book tour, leaves Thomas Thwaites in a slump. His friends increasingly behave like adults, while Thwaites still lives at home, "stuck in a big, dark hole." Luckily, a research grant offers the perfect out: a chance to take a holiday from the complications of being human—by transforming himself into a goat. What ensues is a hilarious and surreal journey through engineering, design, and psychology, as Thwaites interviews neuroscientists, animal behaviorists, prosthetists, goat sanctuary workers, and goatherds. From this, he builds a goat exoskeleton—artificial legs, helmet, chest protector, raincoat from his mum, and a prosthetic goat stomach to digest grass (with help from a pressure cooker and campfire)—before setting off across the Alps on four legs with a herd of his fellow creatures. Will he make it? Do Thwaites and his readers discover what it truly means to be human? *GoatMan* tells all in Thwaites's inimitable style, which NPR extols as "a laugh-out-loud-funny but thoughtful guide through his own adventures."
