Collins Skills for the TOEIC Test: Speaking and Writing is a unique skills-based exam preparation course. TOEIC ('Test of English for International Communication') is a test of English proficiency for people in the workplace seeking to work in an international environment or looking for promotion within their organisation. The TOEIC test questions simulate real-life situations relevant to the global workplace. Score reports for candidates provide accurate, meaningful feedback about a test taker's strengths and weaknesses. Collins Skills for TOEIC is a two book series (1 Listening/Reading; 2 Speaking/Writing) and focuses on helping learners handle the integrated skill aspect of the TOEIC test, where they are required to produce responses based on mixed input. Each book in the series therefore will contain all four skills but in different weightings. To facilitate the interpretation of test scores from the new TOEIC[R] (Test of English for International Communications[TM]) speaking and writing tests as measures of English-language proficiency, we administered a self-assessment inventory to TOEIC examinees in Japan and Korea, to gather their perceptions of their ability to perform a variety of everyday English-language tasks. TOEIC scores related relatively strongly to test taker self-reports for both speaking and writing tasks. The results were extraordinarily consistent, with examinees at each higher TOEIC score level being more likely to report that they could successfully accomplish each of the everyday language tasks in English. The pattern of correlations also suggested modest discriminant validity of the new TOEIC speaking and writing measures, suggesting that both measures contribute uniquely to the assessment of English-language proficiency. (Three appendixes are included: (1) Can-Do Tables, Using a Less Stringent Standard, for TOEIC Speaking and Writing Scores; (2) Can-Do Table for TOEIC Speaking; and (3) Can-Do Table for TOEIC Writing. Contains 7 tables.).

This book explores the influence of high stakes standardised testing within the context of South Korea. South Korea is regarded as a shining example of success in educational achievement and, as this book reveals, pressurised standardised testing has been a major contributing factor to its success. This unique country provides an excellent setting from which to explore the powerful relationship that exists between

testing and learning and can advance our understanding of which factors and test conditions will positively and negatively influence learning. This book follows the test activity of a group of Korean university students preparing for the TOEIC (Test of English for International Communication) and posits a revised model of the influence of testing on learning. It calls for a more socially situated view of tests and test-takers considered in relation to the sociocultural, historical, political and economic contexts in which they are embedded.

The use of computers and the Internet in the testing community has expanded the opportunity for innovative testing. Until now, there was no one source that reviewed the latest methods of automated scoring for complex assessments. This is the first volume to provide that coverage, along with examples of "best practices" in the design, implementation, and evaluation of automated complex assessment. The contributing authors, all noted leaders in the field, introduce each method in the context of actual applications in real assessments so as to provide a realistic view of current industry practices. Evidence Centered Design, an innovative approach to assessment design, is used as the book's conceptual framework. The chapters review both well known methods for automated scoring such as rule-based logic, regression-based, and IRT systems, as well as more recent procedures such as Bayesian and neural networks. The concluding chapters compare and contrast the various methods and provide a vision for the future. Each chapter features a discussion of the philosophical and practical approaches of the method, the associated implications for validity, reliability, and implementation, and the calculations and processes of each technique.

Intended for researchers, practitioners, and advanced students in educational testing and measurement, psychometrics, cognitive science,

technical training and assessment, diagnostic, licensing, and certification exams, and expert systems, the book also serves as a resource in advanced courses in educational measurement or psychometrics.
