Chassis Handbook Bernhard Heiing, Metin Ersoy, 2010-11-09 In spite of all the assistance offered by electronic control systems, the latest generation of passenger car chassis still relies on conventional chassis elements. With a view towards driving dynamics, this book examines these conventional elements and their interaction with mechatronic systems. First, it describes the fundamentals and design of the chassis and goes on to examine driving dynamics with a particularly practical focus. This is followed by a detailed description and explanation of the modern components. A separate section is devoted to the axles and processes for axle development. With its revised illustrations and several updates in the text and list of references, this new edition already includes a number of improvements over the first edition.

Automotive Transmissions Harald Naunheimer, Bernd Bertsche, Joachim Ryborz, Wolfgang Novak, 2010-11-09 This book gives a full account of the development process for automotive transmissions. Main topics: - Overview of the traffic - vehicle - transmission system - Mediating the power flow in vehicles - Selecting the ratios - Vehicle transmission systems - basic design principles - Typical designs of vehicle transmissions - Layout and design of important components, e.g. gearshifting mechanisms, moving-off elements, pumps, retarders - Transmission control units - Product development process, Manufacturing technology of vehicle transmissions, Reliability and testing The book covers manual, automated manual and automatic transmissions as well as continuously variable transmissions and hybrid drives for passenger cars and commercial

vehicles. Furthermore, final drives, power take-offs and transfer gearboxes for 4-WD-vehicles are considered. Since the release of the first edition in 1999 there have been a lot of changes in the field of vehicles and transmissions. About 40% of the second edition's content is new or revised with new data.

Sonic Interaction Design Karmen Franinovic, Stefania Serafin, 2013-03-22 An overview of emerging topics, theories, methods, and practices in sonic interactive design, with a focus on the multisensory aspects of sonic experience. Sound is an integral part of every user experience but a neglected medium in design disciplines. Design of an artifact's sonic qualities is often limited to the shaping of functional, representational, and signaling roles of sound. The interdisciplinary field of sonic interaction design (SID) challenges these prevalent approaches by considering sound as an active medium that can enable novel sensory and social experiences through interactive technologies. This book offers an overview of the emerging SID research, discussing theories, methods, and practices, with a focus on the multisensory aspects of sonic experience. Sonic Interaction Design gathers contributions from scholars, artists, and designers working at the intersections of fields ranging from electronic music to cognitive science. They offer both theoretical considerations of key themes and case studies of products and systems created for such contexts as mobile music, sensorimotor learning, rehabilitation, and gaming. The goal is not only to extend the existing research and pedagogical approaches to SID but also to foster domains of practice for sound designers, architects, interaction designers, media artists, product designers, and urban planners. Taken together, the chapters provide a foundation for a still-emerging field, affording a new generation of designers a fresh perspective on interactive sound as a situated and multisensory experience. Consuming Mobility Jorrit O. Nijhuis,2013 The current fossil fuel-based system of mobility is associated with a wide range of environmental and social problems. There is a growing body of literature on system innovations and transitions which has as a common understanding that long-term transformative change is necessary to deal with these complex problems. However, knowledge on the crucial role of citizen-consumers in sustainable mobility transitions is still underdeveloped. By incorporating the viewpoint of consumption patterns and everyday life routines, this book provides (new) knowledge on the role of citizen-consumers in sustainable mobility transitions. Theoretically, a practice based approach is developed as a novel framework to analyse, understand and influence transition processes to sustainable mobility at the level of everyday life. The focus in each of the three cases studies is on situated interactions between consumers and producers. Amongst these is an analysis of the role environmental information and subsidies in new car purchasing. Also, various examples in which an attempt was made to orchestrate a (modal) shift in commuting practices are examined. Each of the empirical case studies shows the important role of contextual factors in understanding and influencing mobility behaviour of citizen-consumers. In addition, this book helps to understand how and why innovation in mobility practices takes place or not.
