**Annette D. Bernhardt**

**World Scientific Reference On Innovation, The (In 4 Volumes)** ,2018-03-20 This multi-volume set covers a wide range of topics on innovation, which are all of great interest to academics, policymakers, university administrators, state and regional economic development officials, and students. Two unique features of the volume are the large body of global evidence on innovation presented and its consideration of the following timely and important topics in innovation: cybersecurity, open innovation, the globalization of R&D, and university technology transfer. Innovation is a topic of great importance in many fields in business administration, such as management, strategy, operations management, finance, marketing, and accounting, as well as in numerous social science disciplines, including economics, sociology, political science, and psychology. This volume fully reflects such interdisciplinary approaches. Volume 1 provides extensive global evidence on university technology transfer and innovation partnerships. Volume 2 is focused on the managerial and public policy implications of the globalization of R&D. Volume 3 presents start-of-the-art theoretical and empirical evidence on open innovation. Volume 4 is a comprehensive analysis of cybersecurity. This set is essential reading for those who wish to have a comprehensive understanding of the antecedents and consequences of innovation.

**Understanding the Educational and Career Pathways of Engineers** National Academy of Engineering, Committee on Understanding the Engineering Education-Workforce Continuum, 2019-01-26 Engineering skills and knowledge are foundational to technological innovation and development that drive long-term economic growth and help solve societal challenges. Therefore, to ensure national competitiveness and quality of life it is important to understand and to continuously adapt and improve the educational and career pathways of engineers in the United States. To gather this understanding it is necessary to study the people with the engineering skills and knowledge as well as the evolving system of institutions, policies, markets, people, and other resources that together prepare, deploy, and replenish the nation's engineering workforce. This report explores the characteristics and career choices of engineering graduates, particularly those with a BS

or MS degree, who constitute the vast majority of degreed engineers, as well as the characteristics of those with non-engineering degrees who are employed as engineers in the United States. It provides insight into their educational and career pathways and related decision making, the forces that influence their decisions, and the implications for major elements of engineering education-to-workforce pathways.

*Transforming the U.S. Workforce Development System* David Finegold, Mary Gatta, Hal Salzman, Susan J. Schurman, 2010  
This book brings together leading scholars and practitioners working in the job skills field to examine what research tells us about the current state of the U.S. skills system in comparative perspective and the changes that are required for the future.

**Building Workforce Strength** Ron Elsdon, 2010-06-16 This book explores the perspectives of experienced practitioners, sharing ideas about building and sustaining organizational strength through workforce development practices and systems. In an environment where information, service, and knowledge are primary sources of value creation, workforce strength is central to securing prosperity. Written by practitioners for practitioners, *Building Workforce Strength: Creating Value through Workforce and Career Development* bridges the disciplines of organization and individual development, showing those charged with organizational progress why workforce strength is a key component of prosperity—and how it can be achieved. This hands-on volume is organized in three sections that establish a foundation for workforce and career development, explore implementation in organizations, and examine the process's implications for working with individuals. Showcasing workforce and career development practices and systems for both represented and nonrepresented populations, it provides a framework, techniques, and examples that will guide approaches to building workforce strength. Applications of workforce and career development principles in a variety of sectors, such as healthcare and high technology, offer tangible examples of these principles in practice.

**Not Just Getting by** Mary Elizabeth Gatta, Kevin P. McCabe, 2005 *Not Just Getting By* chronicles groundbreaking thinking and research on new and innovative workforce development initiatives to create flexible and collaborative programs and policies. Author Mary Gatta builds on extensive interviews and focus groups with 128 women enrolled in a U.S. Department of Labor pilot program in New Jersey focusing on how they attain education through online courses while working, raising their children, and dealing with the many demands on their lives. The book addresses three main areas: It engages current policy debates demonstrating how online learning and other forms of flexible learning opportunities will reorganize the way federal and state governments deliver skills training, especially working poor single mothers, within the context of Temporary Aid to Needy Families (TANF), the Workforce Investment Act (WIA) and other legislated workforce development programs in the 21st century. It explores the development of the program and qualitatively details the

experiences of the women as they spend a year receiving online learning courses. It explores how to rethink workforce development so that online learning for low wage workers and other innovative programs can be successful. As both a piece of scholarship and a case study in successful policy development, this text will be a useful supplement for courses in the sociology of labor, women's studies, or adult education. It will also serve policymakers and others who are looking for a model of training and skills delivery that actually works.

Theoretical Perspectives on Work and the Employment Relationship Bruce E. Kaufman, Industrial Relations Research Association, 2004 Developing a strong theoretical base for research and practice in industrial relations and human resource management has to date remained a largely unfulfilled challenge. This text presents contributions from 15 scholars, developing their perspectives on work and the employment relationship.

*Resources in Education*, 1998

*The Gloves-off Economy* Annette D. Bernhardt, 2008 Across the United States, increasing numbers of employers are breaking, bending, or evading long-established laws and standards designed to protect workers, from the minimum wage to job safety standards to the right to organize. This gloves-off economy, no longer confined to a marginal set of sweatshops and fly-by-night small businesses, is sending shock waves into every corner of the low-wage labor market. In the process, employers who play by the rules are under growing pressure to follow suit, intensifying the search for low-cost business strategies across a wide range of industries and ratcheting up into ever higher reaches of the labor market. Although other books have touched on pieces of this problem, *The Gloves-off Economy* is the first to provide a comprehensive, integrated analysis--and quite a disturbing one. This book examines a range of gloves-off practices, the workers who are affected by them, and strategies for enforcing workplace standards. The editors, four respected labor scholars, have brought together economists, sociologists, labor attorneys, union strategists, and other experts to offer varying perspectives on both the problem and the creative solutions currently being explored in a wide range of communities and industries. Annette Bernhardt, Heather Boushey, Laura Dresser, and Chris Tilly and the volume's other authors combine rigorous analysis with a stirring call to renew worker protections in the twenty-first century.

**A Field in Flux** Robert B. McKersie, 2019-05-15 *A Field in Flux* chronicles the extraordinary journey of industrial and labor relations expert Robert McKersie. One of the most important industrial relations scholars and leaders of our time, McKersie pioneered the study of labor negotiations, helping to formulate the concepts of distributive and integrative bargaining that have served as analytical tools for understanding the bargaining process more generally. The book provides a window into McKersie's life and work and its impact on the evolution of labor and industrial relations. Spanning six decades, the reader learns about the intersection of labor and the Civil Rights movement, the watershed moment of the Air Traffic Controller's Strike, his relationship with George Schultz, the shift from labor relations to human resource management, and

McKersie's role in the seminal cases (Motorola, GM, Toyota) of the labor movement. *A Field in Flux* serves two important functions: it demonstrates how people have influenced past employment policies and practices when called to action in critical situations, and it seeks to instill confidence in those who will be called on to address the big challenges facing the future of work today and in the years to come. During a time when the basic values of industrial relations are being challenged and violated, McKersie argues that the profession must adapt to the changing world of work and not forget about the value placed on efficiency, equity, and inclusive employment policies and practices.

All I Want Is a Job! Mary Gatta, 2014-04-02 In *All I Want Is a Job!*, Mary Gatta puts a human face on workforce development policy. An ethnographic sociologist, Gatta went undercover, posing as a client in a New Jersey One-Stop Career Center. One-Stop Centers, developed as part of the federal Workforce Investment Act, are supposed to be an unemployed worker's go-to resource on the way to re-employment. But, how well do these centers function? With swarms of new clients coming through their doors, are they fit for the task of pairing America's workforce with new jobs? Weaving together her own account with interviews of jobless women and caseworkers, Gatta offers a revealing glimpse of the toll that unemployment takes and the realities of social policy. Women—both educated and unskilled—are particularly vulnerable in the current economy. Since they are routinely paid less than their male counterparts, economic security is even harder for them to grasp. And, women are more easily tracked into available, low-wage work in sectors such as retail or food service. Originally designed to pair job-ready workers with available openings, the current system is ill fitted for diverse clients who are seeking gainful employment. Even if One-Stops were better suited to the needs of these workers, good jobs are scarce in the wake of the Great Recession. In spite of these pitfalls, Gatta saw hope and a sense of empowerment in clients who got intensive career counseling, new jobs, and social support. Drawing together tales from the frontlines, she highlights the promise and weaknesses of One-Stop Career Centers, recommending key shifts in workforce policy. America deserves a system that is less discriminatory, more human, and better able to assist women and their families in particular. The employed and unemployed alike would be better served by such a system—one that would meaningfully contribute to our economic recovery and future prosperity.

**Firm Innovation and Productivity in Latin America and the Caribbean** Inter-American Development Bank, Matteo Grazzi, Carlo Pietrobelli, 2016-07-01 This volume uses the study of firm dynamics to investigate the factors preventing faster productivity growth in Latin America and the Caribbean, pushing past the limits of traditional macroeconomic analyses. Each chapter is dedicated to an examination of a different factor affecting firm productivity - innovation, ICT usage, on-the-job-training, firm age, access to credit, and international linkages - highlighting the differences in firm characteristics, behaviors, and strategies. By showcasing this remarkable heterogeneity, this collection challenges regional policymakers to look beyond one-size-fits-all solutions and create balanced policy mixes tailored to distinct firm needs. Juggling Food and Feelings Mary Elizabeth Gatta,2002 In Juggling Food and Feelings Mary Gatta applies social and structuration theory to the workplace as she analyzes the emotional challenges faced by restaurant workers. Gatta utilizes extensive participatory observation of, and interviews with, restaurant managers and servers to explore how workers deal with emotional experience in the workplace. Positing that we ordinarily maintain an emotional balance, Gatta theorizes that our ability to cope with emotional disturbances in the workplace depends on situated rebalancing scripts used to control feelings. Contributing to the sociology of gender, social psychology, and labor theory this study of occupations expertly reveals the complex typology of emotion management.

Gender, Ageing and Extended Working Life Wendy Loretto,Clary Krekula,Sarah Vickerstaff,Debra Street,Aine Ni Leime,2019-01-23 Nations that are raising retirement ages appear to work on the assumption that there is appropriate employment available for people who are expected to retire later. 'Gender, ageing and extended working life' challenges both this narrative, and the gender-neutral way the expectation for extending working lives is presented in most policy-making circles. The international contributors to this book - part of the Ageing in a Global Context series - apply life-course approaches to understanding evolving definitions of work and retirement. They consider the range of transitions from paid work to retirement that are potentially different for women and men in different family circumstances and occupational locations, and offer solutions governments should consider to enable them to evaluate existing policies. Based on evidence from Australia, Germany, Ireland, Portugal, Sweden, the United Kingdom and the United States, this is essential reading for researchers and students, and for policymakers who formulate and implement employment and pensions policy at national and international levels.

**The Oxford Handbook of Participation in Organizations** Adrian Wilkinson,Paul J. Gollan,Mick Marchington,David Lewin,2010-02-18 Employee participation encompasses the range of mechanisms used to involve the workforce in decisions at all levels of the organization - whether direct or indirect - conducted with employees or through their representatives. In its various guises, the topic of employee participation has been a recurring theme in industrial relations and human resource management. One of the problems in trying to develop any analysis of participation is that there is potentially limited overlap between these different disciplinary traditions, and scholars from diverse traditions may know relatively little of the research that has been done elsewhere. Accordingly in this book, a number of the more significant disciplinary areas are analysed in greater depth in order to ensure that readers gain a better appreciation of what participation means from these quite different contextual perspectives. Not only is there a range of different traditions contributing to the research and literature on the subject, there is also an extremely diverse sets of practices that congregate under the banner of participation. The handbook discusses various arguments and schools of thought about employee participation, analyzes the range of forms that

participation can take in practice, and examines the way in which it meets objectives that are set for it, either by employers, trade unions, individual workers, or, indeed, the state. In doing so, the Handbook brings together leading scholars from around the world who present and discuss fundamental theories and approaches to participation in organization as well as their connection to broader political forces. These selections address the changing contexts of employee participation, different cultural/ institutional models, old/'new' economy models, shifting social and political patterns, and the correspondence between industrial and political democracy and participation.

*Introduction to Sociology 3e* Tonja R. Conerly, Kathleen Holmes, Asha Lal Tamang, 2024-09-09 Introduction to Sociology 3e aligns to the topics and objectives of many introductory sociology courses. It is arranged in a manner that provides foundational sociological theories and contexts, then progresses through various aspects of human and societal interactions. The new edition is focused on driving meaningful and memorable learning experiences related to critical thinking about society and culture. The text includes comprehensive coverage of core concepts, discussions and data relevant to a diverse audience, and features that draw learners into the discipline in powerful and personal ways. Overall, Introduction to Sociology 3e aims to center the course and discipline as crucial elements for understanding relationships, society, and civic engagement; the authors seek to lay the foundation for students to apply what they learn throughout their lives and careers. This is an adaptation of Introduction to Sociology 3e by OpenStax. You can access the textbook for free at [openstax.org](https://openstax.org). Minor editorial changes were made to ensure a better reading experience. Textbook content produced by OpenStax is licensed under a Creative Commons Attribution 4.0 International License.

*The Smart City - how smart can 'IT' be?* Malin Granath, 2016-08-30 Cities are facing many challenges; challenges linked to world-wide trends like urbanisation, climate changes and globalisation. In parallel to these trends, we have seen a rapid digitalisation in and of different parts of society. Cities and local governments have been appointed an important role in overcoming these world-wide challenges, and subsequently, in policy practices digitalisation is perceived as an important dimension in delivering better and sustainable services to its citizens. As a result, the smart city has emerged as a concept and approach to contemporary urban planning and development. There is still no common understanding of the concept and what components and dimensions it covers. However, in all definitions digitalisation constitutes one dimension, but the role and function of it is still not clear. In this study I have examined how different stakeholders talk about digitalisation in policy and planning practices of urban development. The aim has been to identify and analyse different repertoires of discourses on digitalisation to advance our knowledge on how goals related to the smart city and digitalisation are put into practice. The results are based on a qualitative and interpretative case study with a social constructionist approach. An analytical framework based on discourse analysis, stakeholder theory and (new) institutional theory has been constructed to analyse the case. Main results show that repertoires on digitalisation are limited in both policy and planning of urban development.

In these practices, digitalisation is primarily seen as a means or as a communication infrastructure in relation to two city services/functions; i.e. services related to governance and to environment. Results also show that practices of urban planning and development are institutionalised, where different stakeholders' salience and stakes in urban development and in digitalisation differ, but it is clear that digitalisation is a secondary issue. Implications of these results are that the taken-for-granted discourses in policy and planning practices of urban development limit both practice and research when developing a smart city. Städer står inför många utmaningar kopplat till världsomspännande trender såsom urbanisering, klimatförändringar, och globalisering. Parallellt med dessa trender har vi sett en snabb digitalisering i och av olika delar av samhället. I detta sammanhang har städer och kommuner blivit tilldelade en viktig roll i hanteringen av dessa utmaningar. På policynivå ses digitalisering som en viktig dimension för att leverera hållbar och bättre service till medborgarna. Som ett led i detta har smarta städer vuxit fram som både begrepp och metod för stadsplanering och stadsutveckling. Det finns dock ingen gemensam tolkning av begreppet. Däremot finns digitalisering med som en dimension i definitionerna, men vilken roll och funktion den har är fortfarande oklart. I denna studie har jag undersökt hur olika intressenter talar om digitalisering i olika policy- och planeringspraktiker kopplat till stadsutveckling. Syftet har varit att identifiera och analysera repertoarer av digitaliseringsdiskurser för att bidra med kunskap om hur mål kopplade till smarta städer och digitalisering omsätts i praktiken. Resultaten är baserade på en kvalitativ och tolkande fallstudie med en socialkonstruktivistisk ansats. Ett analytiskt ramverk baserat på diskursanalys, intressentanalys, och nyinstitutionell teori har tagits fram för att analysera fallet. Resultaten visar att digitaliseringsrepertoarer är begränsade både i policy och i planering av stadsutveckling. I dessa praktiker ses digitalisering främst som ett verktyg eller en kommunikationsinfrastruktur i relation till två samhällsfunktioner, nämligen funktioner kopplade till styrning och administration, och funktioner kopplade till miljö. Resultaten visar också att praktiker kopplade till stadsplanering och stadsutveckling är institutionaliserade, praktiker där olika intressenter har olika makt, legitimitet och angelägenhet gällande stadsutveckling och digitalisering. Det är dock tydligt att digitalisering är en sekundär fråga. Implikationerna av dessa resultat är att de förgivettagna diskurserna begränsar både praktiken och forskningen i utvecklingen av smart städer.

How Asia Works Joe Studwell, 2013-07-02 "A good read for anyone who wants to understand what actually determines whether a developing economy will succeed." —Bill Gates, "Top 5 Books of the Year" An Economist Best Book of the Year from a reporter who has spent two decades in the region, and who the Financial Times said "should be named chief myth-buster for Asian business." In *How Asia Works*, Joe Studwell distills his extensive research into the economies of nine countries—Japan, South Korea, Taiwan, Indonesia, Malaysia, Thailand, the Philippines, Vietnam, and China—into an accessible, readable narrative that debunks Western misconceptions, shows what really happened in Asia and why, and for once makes clear why some countries have boomed while others have languished. Studwell's in-depth analysis focuses on

three main areas: land policy, manufacturing, and finance. Land reform has been essential to the success of Asian economies, giving a kick-start to development by utilizing a large workforce and providing capital for growth. With manufacturing, industrial development alone is not sufficient, Studwell argues. Instead, countries need “export discipline,” a government that forces companies to compete on the global scale. And in finance, effective regulation is essential for fostering, and sustaining growth. To explore all of these subjects, Studwell journeys far and wide, drawing on fascinating examples from a Philippine sugar baron’s stifling of reform to the explosive growth at a Korean steel mill. “Provocative . . . How Asia Works is a striking and enlightening book . . . A lively mix of scholarship, reporting and polemic.” —The Economist
