With a new focus on evidence-based practice, the 3rd edition of this authoritative reference covers every aspect of infusion therapy and can be applied to any clinical setting. Completely updated content brings you the latest advances in equipment, technology, best practices, guidelines, and patient safety. Other key topics include quality management, ethical and legal issues, patient education, and financial considerations. Ideal as a practical clinical reference, this essential guide is also a perfect review tool for the CRNI examination. Authored by the Infusion Nurses Society, this highly respected reference sets the standard for infusion nursing practice. Coverage of all 9 core areas of INS certification makes this a valuable review resource for the examination. Material progresses from basic to advanced to help new practitioners build a solid foundation of knowledge before moving on to more advanced topics. Each chapter focuses on a single topic and can serve as a stand-alone reference for busy nursing professionals. Expanded coverage of infusion therapy equipment, product selection, and evaluation help you provide safe, effective care. A separate chapter on infusion therapy across the continuum offers valuable guidance for treating patients with infusion therapy needs in outpatient, long-term, and home-care, as well as hospice and ambulatory care centers. Extensive information on specialties addresses key areas such as oncology, pain management, blood components, and parenteral nutrition. An evidence-based approach and new Focus on Evidence boxes throughout the book emphasize the importance of research in achieving the best possible patient outcomes. The user-friendly design highlights essential information in handy boxes, tables, and lists for quick access. Completely updated coverage ensures you are using the most current infusion therapy guidelines available.

Venous access devices are necessary for any patient requiring repeated blood sampling, parenteral nutrition, chemotherapy, antibiotic therapy or other IV treatments to be delivered in the hospital setting or at home. In the last decade, ultrasound-guided PICCs and Midline catheters – inserted by adequately trained physicians or nurses - have suddenly and widely spread in the field of venous access devices all over the world. The introduction and diffusion of PICCs in Italy has been historically linked to the GAVeCeLT association (the Italian Group of Long Term Venous Access Devices) and particularly to the authors' scientific and didactic activity. This volume examines the clinical indications for these devices and illustrates the details of their insertion and management in several clinical settings. Furthermore, all the specifications regarding the materials to use and all the aspects related to device removal and replacement, as well as the different strategies for complications prevention, are thoroughly discussed.

Using examples from countries of four continents, this volume addresses home health nursing from an international perspective. So that health professionals world wide can learn from each other, the book profiles experiences in ten countries from Zimbabwe to Australia, and points to world wide trends. Education, quality improvement, cost of home care, and nursing research are also discussed. Distinguished contributors include Ida Martinson, Violet Barkauskas, and Tina Marelli.

Why do we fear vaccines? A provocative examination by Eula Biss, the author of Notes from No Man's Land, winner of the National Book Critics Circle Award Upon becoming a new mother, Eula Biss addresses a chronic condition of fear-fear of the government, the medical establishment, and what is in your child's air, food, mattress, medicine, and vaccines. She finds that you cannot immunize your child, or yourself, from the world. In this bold, fascinating book, Biss investigates the metaphors and myths surrounding our conception of immunity and its implications for the individual and the social body. As she hears more and more fears about vaccines, Biss researches what they mean for her own child, her immediate community, America, and the world, both historically and in the present moment. She extends a conversation with other mothers to meditations on Voltaire's Candide, Bram Stoker's Dracula, Rachel Carson's Silent Spring, Susan Sontag's AIDS and Its Metaphors, and beyond. On Immunity is a moving account of how we are all interconnected-our bodies and our fates. Written by experts from around the globe (USA, Europe, Australia and Asia) this book explains technical issues, digital information processing and collective experiences from practitioners in different parts of the world practicing a wide range of telenursing applications including telenursing research by professionals in the field. This book lays the foundations for the globalisation of telenursing procedures, making it possible to know that a nursing service could perform on a patient anywhere in the world. Cancer Pain Management, Second Edition will substantially advance pain education. The unique combination of authors -- an educator, a leading practitioner and administrator, and a research scientist -- provides comprehensive, authoritative coverage in addressing this important aspect of cancer care. The contributors, acknowledged experts in their areas, address a wide scope of issues. Educating health care providers to better assess and manage pain and improve patients' and families' coping strategies are primary goals of this book. Developing research-based clinical guidelines and increasing funding for research is also covered. Ethical issues surrounding pain management and health policy implications are also explored. Contributi di: Alessandro Danovi, Stefano Olgiati, Sara Bertelli, Silvia Mauri, Alessandra Milani, Daniele Piacentini, Eliana Misurelli, Pier Luigi Deriu.

This book offers an overview of acute care surgery around the world, focusing on the four main branches of this novel subspecialty: trauma, general emergencies, critical care, and rescue surgery. The book's primary goal is to provide a general view of acute care surgery, while addressing the most important issues in depth. The content is divided into three parts, the first of which is dedicated to the general organization of trauma centers, including the composition of modern trauma teams. Protocols of

activation and action for the trauma team, as well as damage control procedures both in the emergency room and in the surgical theatre, are described. The book also addresses the development of a trauma registry, together with the quality assessment process that can be applied. In turn, the second part describes the principal protocols for making diagnoses, with special attention to circumstances such as unstable hemodynamics, neurological deterioration, normal vital signs, and penetrating injuries. The book subsequently deals with the most important aspects of trauma to the abdomen, chest, and pelvis, with notes on both surgical and intensive care issues. Practical descriptions of how to treat principal injuries to various organs are also provided. Finally, the third part of the book is dedicated to the most frequent general surgical emergencies and rescue surgical approaches, and includes information on diagnostic support with point of care ultrasound and endoscopic advanced techniques. Presenting cutting-edge strategies, this book will be of interest to professionals involved in surgical and intensive care for emergency conditions, such as colonic perforations, obstructions, acute pancreatitis, biliary tree stones, and caustic injuries.

Revised for nursing students, educators, and practicing nurses, this complete reference contains almost 100 comprehensive clinical care plans for adult patients in medical-surgical units. New to this edition are care plans for acute alcohol withdrawal, hypertensive crisis, Parkinson's disease, sickle cell disease, transplantation, and end of life.

This book explores the meaning of quality of life in care for older persons and introduces the reader to their main concerns when receiving care. Based on qualitative research, it pays particular attention to the needs and requirements of older people, considering their individual family situations, social circumstances, values and lifestyles. Person-centred care is a way of providing nursing care that puts older people and their families at the core of all decisions, seeing each person as an individual, and working together to develop appropriate solutions. Following an introduction to the concept of quality of life in old age, the book reviews essential findings from worldwide research into the experiences of older people with regard to nursing care and the impact of these experiences on their quality of life. It investigates health promotion, care provided in nursing homes and assisted living facilities, and palliative care. Each chapter includes a brief introduction to the respective field of nursing care and the problems it has to deal with, concluding with a discussion of their implications for nursing practice in the respective field of care. In closing, the evidence from qualitative research is discussed in relation to current gerontological theories.

This innovative text uses concrete examples and hands-on exercises to help readers clearly understand and apply the five steps of the nursing process. Wellness concepts and independent critical thinking, major emphases of this text, are incorporated into each step of the nursing process. Book provides extensive treatment of collaborative practice and delegation, critical thinking, case management and critical pathways. For those interested in understanding the nursing process within a framework for providing holistic care.

It is difficult to improve on a classic, but the fifth edition of *Psychodynamic Psychiatry in Clinical Practice* does just that, offering the updates readers expect with a deft reorganization that integrates DSM-5® with the author's emphasis on psychodynamic thinking. The individual patient is never sacrificed to the diagnostic category, yet clinicians will find the guidance they need to apply DSM-5® appropriately. Each chapter has been systematically updated to reflect the myriad and manifold changes in the 9 years since the previous edition's publication. All 19 chapters have new references and cutting-edge material that will prepare psychiatrists and residents to treat patients with compassion and skill. The book offers the following features: Each chapter integrates new neurobiological findings with psychodynamic understanding so that clinicians can approach their patients with a truly biopsychosocial treatment plan. Excellent writing and an intuitive structure make complicated psychodynamic concepts easy to understand so that readers can grasp the practical application of theory in everyday practice. The book links clinical understanding to the new DSM-5® nomenclature so that clinicians and trainees can adapt psychodynamic thinking to the new conceptual models of disorders. New coverage of psychodynamic thinking with relation to the treatment of patients on the autism spectrum addresses an increasingly important practice area. Posttraumatic stress and dissociative disorders have been combined to allow for integrated coverage of primary psychiatric disorders related to trauma and stressors. A boon to clinicians in training and practice, the book has been meticulously edited and grounded in the latest research. The author firmly believes that clinicians must not lose the complexities of the person in the process of helping the patient. *Psychodynamic Psychiatry in Clinical Practice, Fifth Edition*, keeps this approach front and center as it engages, instructs, and exhorts the reader in the thoughtful, humane practice of psychodynamic psychiatry.

The Strategy of Preventive Medicine, by Geoffrey Rose, published in 1993 and remains the classic text for anyone involved in preventive medicine. It puts forward the theory that the essential determinants of the health of society are to be found in its mass characteristics. The deviant minority can only be understood when seen in its societal context, and effective prevention requires changes which involve the population as a whole. He explores the options for prevention of both common medical and behavioural disorders, illustrating his ideas by a variety of examples ranging from heart disease to alcoholism and road accidents. This reissue brings the original text to a new generation involved in preventive

medicine. Khaw and Marmot retain the original text intact, but have added their own perspective on the work. They examine what relevance Rose's ideas might have in the era of the human genome project and other major scientific advances, they consider examples of how the theory might be applied and generalised in medicine and beyond, and they discuss what implications it holds for the future. Rose's Strategy of Preventive Medicine will ensure that this seminal work continues to be read by future generations involved in preventive medicine.

Since the initial publication of this classic text, motivational interviewing (MI) has been used by countless clinicians in diverse settings. Theory and methods have evolved apace, reflecting new knowledge on the process of behavior change, a growing body of outcome research, and the development of new applications within and beyond the addictions field. Including 25 nearly all-new chapters, this revised and expanded second edition now brings MI practitioners and trainees fully up to date. William R. Miller and Stephen Rollnick explain how to work through ambivalence to facilitate change, present detailed guidelines for using their approach with a variety of clinical populations, and reflect on the process of learning MI. Chapters contributed by other leading experts then address such special topics as MI and the stages-of-change model; using the approach with groups, couples, and adolescents; and applications to general medical care, health promotion, and criminal justice settings.

physical edition. Nursing Outcomes: State of the Science is an invaluable resource for nurse researchers, scholars, and health care professionals committed to effective, quality nursing care as evidenced by nursing-sensitive outcomes measurement. This text concentrates on outcome indicators which focus on how patients and their conditions are affected by their interaction with nursing staff. Each chapter includes a concept analysis of the outcome concept; then defining characteristics are identified and a conceptual definition is proposed. Factors that influence the outcome concept are discussed, as well as the consequences for clients' health and well-being. The strength of the evidence is reviewed concerning the sensitivity of the outcome concept to nursing structure variables and nursing/processes interventions. The author offers a comprehensive synthesis of the literature, critically reviews the quality of the evidence, and provides direction for the selection of outcome variables

The Practice of Primary Nursing: Relationship-Based, Resource-Driven Care Delivery updates on where Primary Nursing fits in today's health care climate. Originally started at the University of Minnesota Hospitals in 1968, Primary Nursing has been used by many hospitals in the U.S., Canada, and the World. This new edition thoroughly explains the four important operating elements of Primary Nursing and outlines the actual steps taken at the unit level for successful implementation. Today's hospital needs the type of relationship-based care delivery that Primary Nursing provides. Winner of the 2002 American Journal of Nursing Book of the Year Award!

The second edition of Brunner & Suddarth's Handbook of Laboratory and Diagnostic Tests is a concise, portable, full-color handbook of hundreds of test results and their implications for nursing. Designed to accompany Brunner & Suddarth's Textbook for Medical-Surgical Nursing, 13th edition, this handbook provides readers with a quick-reference tool for use throughout the nursing curriculum, in clinicals, and in practice. The two-part organization includes a review of specimen collection procedures, followed by a concise, alphabetical list of close to 300 tests and their implications. The entry on each test includes reference values or normal findings, abnormal findings with associated nursing implications, critical values, purpose and description of the test, interfering factors, and nursing considerations for patient care before, during, and after the test.
