This practical introduction to second-order and growth mixture models using Mplus introduces simple and complex techniques through incremental steps. The authors extend latent growth curves to second-order growth curve and mixture models and then combine the two. To maximize understanding, each model is presented with basic structural equations, figures with associated syntax that highlight what the statistics mean, Mplus applications, and an interpretation of results. Examples from a variety of disciplines demonstrate the use of the models and exercises allow readers to test their understanding of the techniques. A comprehensive introduction to confirmatory factor analysis, latent growth curve modeling, and growth mixture modeling is provided so the book can be used by readers of various skill levels. The book's datasets are available on the web. Highlights include: -Illustrative examples using Mplus 7.4 include conceptual figures, Mplus program syntax, and an interpretation of results to show readers how to carry out the analyses with actual data. -Exercises with an answer key allow readers to practice the skills they learn. -Applications to a variety of disciplines appeal to those in the behavioral, social, political, educational, occupational, business, and health sciences. -Data files for all the illustrative

examples and exercises at www.routledge.com/9781138925151 allow readers to test their understanding of the concepts. -Point to Remember boxes aid in reader comprehension or provide in-depth discussions of key statistical or theoretical concepts. Part 1 introduces basic structural equation modeling (SEM) as well as first- and second-order growth curve modeling. The book opens with the basic concepts from SEM, possible extensions of conventional growth curve models, and the data and measures used throughout the book. The subsequent chapters in part 1 explain the extensions. Chapter 2 introduces conventional modeling of multidimensional panel data, including confirmatory factor analysis (CFA) and growth curve modeling, and its limitations. The logical and theoretical extension of a CFA to a second-order growth curve, known as curve-of-factors model (CFM), are explained in Chapter 3. Chapter 4 illustrates the estimation and interpretation of unconditional and conditional CFMs. Chapter 5 presents the logical and theoretical extension of a parallel process model to a second-order growth curve, known as factor-of-curves model (FCM). Chapter 6 illustrates the estimation and interpretation of unconditional and conditional FCMs. Part 2 reviews growth mixture modeling including unconditional growth mixture modeling (Ch. 7) and conditional growth mixture models (Ch. 8). How to extend second-order growth curves (curve-of-factors and factor-of-curves models) to

growth mixture models is highlighted in Chapter 9. Ideal as a supplement for use in graduate courses on (advanced) structural equation, multilevel, longitudinal, or latent variable modeling, latent growth curve and mixture modeling, factor analysis, multivariate statistics, or advanced quantitative techniques (methods) taught in psychology, human development and family studies, business, education, health, and social sciences, this book's practical approach also appeals to researchers. Prerequisites include a basic knowledge of intermediate statistics and structural equation modeling.

It is universally accepted that sensitive and responsive caregiving leads to positive cognitive and socio-emotional outcomes for children. While several intervention approaches exist, this text brings together the rationale and current evidence base for one such approach—the Mediation Intervention for Sensitizing Caregivers (MISC). MISC integrates aspects of socio-emotional health and cognitive development as well as being less culturally intrusive than existing approaches. It is a strengths-based program complementing existing practices and cultures. Editors bring together in one volume the theory and research from the last decade supporting the MISC approach. Chapters focus on a range of topics, such as training the trainer, maternal depression and MISC, applying MISC to families reunited after migration-related separation and more. The book

Online Library Trauma Focused Cognitive Behavioral Therapy

also focuses on several country-specific cases, such as applying MISC to HIV/AIDS-affected children in South Africa or in early childhood care settings in Israel. This book is essential reading for those working in early educational or clinical settings tasked with developing policy to ensure optimal child developmental outcomes. The book is applicable to professionals from a wide variety of disciplines including clinical, counselling, educational, psychology, psychiatry, paediatrics, nursing, social work and public health.

The two volume APA Handbook of Trauma Psychology is the most comprehensive guide and reference work on the subject to date. It provides a survey of all the major areas and subtopics of empirical knowledge and practical applications in the field of trauma psychology, written by top experts in the field. Volume 1 is divided into sections on the nature of trauma, its psychological impact, major conceptual frameworks for understanding traumatization, and trauma as viewed from the diverse perspective of various disciplines. Volume 2 covers multiple applications of trauma psychology, including various modalities of trauma assessment, major treatment approaches across the lifespan, and multiclient and organizational practice. The APA Handbook of Trauma Psychology is an essential resource for specialists in trauma who need comprehensive information, for practitioners who seek to familiarize themselves

with the range of approaches for trauma assessment and treatment, and for students as a graduate level or advanced undergraduate level textbook. This is the authoritative guide to conducting trauma-focused cognitive-behavioral therapy (TF-CBT), a systematic, evidence-based treatment for traumatized children and their families. Provided is a comprehensive framework for assessing posttraumatic stress disorder, depression, anxiety, and other symptoms; developing a flexible, individualized treatment plan; and working collaboratively with children and parents to build core skills in such areas as affect regulation and safety. Specific guidance is offered for responding to different types of traumatic events, with an entire section devoted to grief-focused components. Useful appendices feature resources, reproducible handouts, and information on obtaining additional training. TF-CBT has been nationally recognized as an exemplary evidence-based program. See also the edited volume *Trauma-Focused CBT for Children and Adolescents: Treatment Applications* for more information on tailoring TF-CBT to children's varying developmental levels and cultural backgrounds.

Trauma and Resilience in Music Education: Haunted Melodies considers the effects of trauma on both teachers and students in the music classroom, exploring music as a means for working through traumatic experiences and the

Online Library Trauma Focused Cognitive Behavioral Therapy

role music education plays in trauma studies. The volume acknowledges the ubiquity of trauma in our society and its long-term deleterious effects while showcasing the singular ways music can serve as a support for those who struggle. In twelve contributed essays, authors examine theoretical perspectives and personal and societal traumas, providing a foundation for thinking about their implications in music education. Topics covered include: Philosophical, psychological, sociological, empirical, and narrative perspectives of trauma and resilience. How trauma-informed education practices might provide guidelines for music educators in schools and other settings Interrogations of how music and music education may be a source of trauma Distinguishing itself from other subjects—even the other arts—music may provide clues to the recovery of traumatic memory and act as a tool for releasing emotions and calming stresses. Trauma and Resilience in Music Education witnesses music's unique abilities to reach people of all ages and empower them to process traumatic experiences, providing a vital resource for music educators and researchers.

Post traumatic stress disorder develops after exposure to one or more terrifying events that have caused, or threatened to cause the sufferer grave physical harm. This book discusses how trauma-focused cognitive therapy can be used to help children and adolescents who suffer from post traumatic stress disorder.

Cognitive therapy is frequently used to treat adults who suffer from PTSD with proven results. Post Traumatic Stress Disorder provides the therapist with instructions on how CT models can be used with children and young people to combat the disorder. Based on research carried out by the authors, this book covers: assessment procedures and measures formulation and treatment planning trauma focused cognitive therapy methods common hurdles. The authors provide case studies and practical tips, as well as examples of self-report measures and handouts for young people and their parents which will help the practitioner to prepare for working with this difficult client group. Post Traumatic Stress Disorder is an accessible, practical, clinically relevant guide for professionals and trainees in child and adolescent mental health service teams who work with traumatized children and young people.

Backed by decades of research, cognitive behavioral therapy is the intervention of choice for clients with post-traumatic stress disorder (PTSD) regardless of their age, gender, ethnicity, or source of symptoms. This compact, clinician-friendly resource walks readers through cognitive behavioral techniques and treatment packages for PTSD, using case studies to illustrate how to troubleshoot common

Online Library Trauma Focused Cognitive Behavioral Therapy

problems. Explaining each approach's theoretical underpinnings as well as its step-by-step implementation, the authors cover both trauma-focused techniques such as prolonged exposure, cognitive processing therapy, and stress inoculation training, and non-trauma-focused or present-centered techniques such as breathing training, relaxation training, and positive self-talk. The book also addresses depression and social isolation, symptoms that often accompany PTSD.

This is the first book to show how to use cognitive behavioural therapy (CBT) with the full spectrum of post-traumatic responses; exploring how they affect and relate to one another. Focusing not only on co-morbidity with other anxiety disorders and depression, the book looks more widely at, for example, co-existing pain, substance abuse and head injury. After discussing how to tailor CBT practice to work most effectively with trauma responses in real-world settings, Michael J Scott goes on to explore the step-by-step treatment of post-traumatic stress disorder, other commonly occurring disorders and, finally, secondary traumatisation. Those training to work with young people, or already doing so, will find the focus in Part Three on CBT with traumatized children invaluable.

This volume brings together leading clinicians and researchers to present cognitive-behavioural approaches to treating PTSD and other trauma-related symptoms and disorders.

This clear-sighted reference offers a transformative new lens for understanding the role of family processes in creating — and stopping — child abuse and neglect. Its integrative perspective emphasizes the interconnectedness of forms of abuse, the diverse mechanisms of family violence, and a child/family-centered, strengths-based approach to working with families. Chapters review evidence-based interventions and also model collaboration between family professionals for effective coordination of treatment and other services. This powerful ecological framework has major implications for improving assessment, treatment, and prevention as well as future research on child maltreatment. Included among the topics:

- Creating a safe haven following child maltreatment: the benefits and limits of social support.
- “Why didn’t you tell?” Helping families and children weather the process following a sexual abuse disclosure.
- Environments recreated: the unique struggles of children born to abused mothers.
- Evidence-based intervention: trauma-focused cognitive behavioral therapy for children and

families. • Preventing the intergenerational transmission of child maltreatment through relational interventions. • Reducing the risk of child maltreatment: challenges and opportunities. Professionals and practitioners particularly interested in family processes, child maltreatment, and developmental psychology will find *Parenting and Family Processes in Child Maltreatment and Intervention* a major step forward in breaking entrenched abuse cycles and keeping families safe.

Many people experience traumatic events and whilst some gradually recover from such experiences, others find it more difficult and may seek professional help for a range of problems. *A Casebook of Cognitive Therapy for Traumatic Stress Reactions* aims to help therapists who may not have an extensive range of clinical experience. The book includes descriptions and case studies of clinical cases of cognitive behavioural treatments involving people who have experienced traumatic events, including: people with phobias, depression and paranoid delusions following traumatic experiences people with Posttraumatic Stress Disorder (PTSD) people who have experienced multiple and prolonged traumatizations people who are refugees or asylum-seekers. All chapters are written by experts in the field and consider what may be learned from such cases. In addition it is considered how these cases can be applied more

This book will be invaluable to all mental health professionals and in particular to therapists wanting to treat people who have experienced traumatic events, allowing them to creatively apply their existing knowledge to new clinical cases. Prolonged Exposure Therapy is an effective, highly flexible, and very well researched intervention to reduce the symptoms of PTSD across a variety of traumatized populations. The second edition of Prolonged Exposure Therapy for PTSD: Emotional Processing of Traumatic Experiences, Therapist Guide, along with the accompanying Workbook, provides all of the tools necessary for trained mental health providers to implement this first-line PTSD treatment with their patients. This model is individualized to address the needs of a variety of trauma survivors. Leaders in clinical practice, training, and research in the field of PTSD treatment, the authors have revised the Guide throughout to reflect the many advances in PTSD research that have occurred since the release of the first edition, including key adjustments to the underlying theory as well as additional evidence for modifications and individualization for more complex patient presentations and military populations. The Guide provides a concise but thorough description of the key components of the program, how to implement them, and when and how to consider adaptations.

This research-based book foregrounds Black narrative traditions and honors alternative methods of data collection, analysis, and representation. Toliver presents a semi-fictionalized narrative in an alternative science fiction setting, refusing white-centric qualitative methods and honoring the ways of the griots who were the scholars of their African nations. By utilizing Black storytelling, Afrofuturism, and womanism as an onto-epistemological tool, this book asks readers to elevate Black imaginations, uplift Black dreams, and consider how Afrofuturity is qualitative futurity. By centering Black girls, the book considers the ethical responsibility of researchers to focus upon the words of our participants, not only as a means to better understand our historic and current world, but to better situate inquiry for what the future world and future research could look like. Ultimately, this book decenters traditional, white-centered qualitative methods and utilizes Afrofuturism as an onto-epistemological tool and ethical premise. It asks researchers to consider how we move forward in data collection, data analysis, and data representation by centering how Black girls reclaim and recover the past, counter negative and elevate positive realities that exist in the present, and create new possibilities for the future. The semi-fictionalized narrative of the book highlights the intricate methodological and theoretical work that undergirds the story. It will be an important text for both new and seasoned researchers interested in social justice. Informed and anti-racist researchers will find *Endarkened* storywork a useful tool for educational, cultural, and social critiques now and in the future.

During the past several decades, there has been a blitz of information, sometimes referred to as the knowledge explosion, and students have struggled in their attempts to distinguish true, fake, and terribly biased information, especially regarding political issues. This book highlights the value of critical thinking as a way to navigate this difficult and frustrating terrain, so that students grow and develop as knowledgeable, independent thinkers. To promote this growth, the book offers thoughtful, evidence-based advice for teachers to support students' deep thinking as it relates to real-world contexts. Strategies presented include student reflection based on experience, moving from narrow to broader perspectives, and using graphic organizers to build and activate knowledge before, during, and after instructional activities. With the instructional guidance and activities presented in this short, easy-to-apply volume, teachers can give students the tools they need to negotiate the often-murky waters of political communication.

Exploring both the intrapersonal (moral) and interpersonal (ethical) nature of death and dying in the context of their development (philosophical), *Dying in a Transhumanist and Posthuman Society* shows how death and dying have been and will continue to be governed in any given society. Drawing on transhumanism and discourses about posthumanity, life prolongation and digital life, the book analyses death, dying and grief via the governance of dying. It states that the bio-medical dimensions of our understanding of death and dying have predominated not only the discourses about

Online Library Trauma Focused Cognitive Behavioral Therapy

death in society and the care of the dying, but their policy and practice as well. It seeks to provoke thinking beyond the benefits of technology and within the confinements of the world transhumanists describe. This book is written for all who have an interest in thanatology (i.e. death studies) but will be useful specifically to those investigating the experiences of dying and grieving in contemporary societies, wherein technology, biology and medicine continuously advance. Thus, the manuscript will be of interest to researchers in a broad range of areas including health and social care, social policy, anthropology, sociology, philosophy, cultural studies, and, of course, thanatology. Using Marxist critique, this book explores manifestations of Artificial Intelligence (AI) in Higher Education and demonstrates how it contributes to the functioning and existence of the capitalist university. Challenging the idea that AI is a break from previous capitalist technologies, the book offers nuanced examination of the impacts of AI on the control and regulation of academic work and labour, on digital learning and remote teaching, and on the value of learning and knowledge. Applying a Marxist perspective, Preston argues that commodity fetishism, surveillance, and increasing productivity ushered in by the growth of AI, further alienates and exploits academic labour and commodifies learning and research. The text puts forward a solid theoretical framework and methodology for thinking about AI to inform critical and revolutionary pedagogies. Offering an impactful and timely analysis, this book provides a critical engagement and application of key Marxist concepts in the study of AI's role in Higher Education. It will

be of interest to those working or researching in Higher Education.

The culmination of more than 25 years of clinical work and research, this is the authoritative presentation of cognitive processing therapy (CPT) for posttraumatic stress disorder (PTSD). Written by the treatment's developers, the book includes session-by-session guidelines for implementation, complete with extensive sample dialogues and 40 reproducible client handouts. It explains the theoretical and empirical underpinnings of CPT and discusses how to adapt the approach for specific populations, such as combat veterans, sexual assault survivors, and culturally diverse clients. The large-size format facilitates photocopying and day-to-day use. Purchasers also get access to a Web page where they can download and print the reproducible materials. CPT is endorsed by the U.S. Departments of Veterans Affairs and Defense, the International Society of Traumatic Stress Studies, and the U.K. National Institute for Health and Care Excellence (NICE) as a best practice for the treatment of PTSD. PTSD is a recently named psychiatric condition that unknown before the publication of DSM-III in 1980. The creation of this diagnosis was intensely controversial, and there continued to be considerable reluctance to apply the term to children. The 1985 landmark volume, *Posttraumatic Stress Disorder in Children*, edited by Spencer Eth and Robert Pynoos, helped establish the validity of this condition during childhood. Now Spencer Eth has edited *PTSD in Children and Adolescents*, a work that brings the field of childhood trauma in to the new century by offering fresh insights on five major topic

areas in child and adolescent PTSD: Techniques for comprehensive evaluation -- details recently developed diagnostic instruments and rating scales that measure the variety and severity of traumatic symptoms in children and adolescents. Forensic aspects of traumatized children -- surveys legally pertinent issues, including abuse, reliability of traumatic memories, and credibility of child victims. Juvenile offenders and incarcerated youth -- examines the role of trauma in the lives of juvenile offenders, noting that the victimization of delinquents must be specifically addressed in order for an integrated approach to treatment to achieve effective rehabilitation. Biological treatment strategies -- systematically reviews the important role of medications for PTSD in clinical practice, including such topics as biological dysregulation, target symptoms, and the inclusion of drugs into the biopsychosocial treatment plan. The relationship between exposure to trauma in childhood and the development of psychiatric disorders in adulthood -- presents current research on the long-term prognosis of traumatized children and adolescents by analyzing the association between early traumatic exposure, biological substrates, and subsequent symptomatic morbidity. Mental health practitioners and trainees, as well as attorneys, pediatricians, and school personnel, will find this thoroughly annotated volume an invaluable roadmap in their journey toward understanding PTSD and discovering more effective treatments for traumatized children and adolescents. Treating Trauma and Traumatic Grief in Children and Adolescents Guilford Press

Featuring a wealth of clinical examples, this book facilitates implementation of Trauma-Focused Cognitive-Behavioral Therapy (TF-CBT) in a range of contexts. It demonstrates how assessment strategies and treatment components can be tailored to optimally serve clients' needs while maintaining overall fidelity to the TF-CBT model.

Coverage includes ways to overcome barriers to implementation in residential settings, foster placements, and low-resource countries. Contributors also describe how to use play to creatively engage kids of different ages, and present TF-CBT applications for adolescents with complex trauma, children with developmental challenges, military families struggling with the stresses of deployment, and Latino and Native American children. See also Cohen et al.'s authoritative TF-CBT manual, *Treating Trauma and Traumatic Grief in Children and Adolescents*, Second Edition.

Structured, therapist-led approaches to play therapy are becoming increasingly popular due to their time-limited nature and efficacy for such specific disorders as trauma and attachment issues. This is the first book to provide comprehensive coverage of numerous directive play therapy techniques and interventions that are empirically validated and can be adapted for use in clinical, school, group,

Online Library Trauma Focused Cognitive Behavioral Therapy

and family settings. Designed for both students and practitioners, the text addresses the theoretical bases for these approaches and provides in-depth, practical guidance for their use. The book describes how directive play therapies differ from nondirective therapies and illustrates best practices in using directive techniques. It examines such diverse approaches as cognitive behavioral, solution focused, sensorimotor, and the use of creative arts in play therapy. Each approach is covered in terms of its theoretical foundation, research basis, specific techniques for practice, and a case example. The text describes how to adapt directive play therapy techniques for use in various contexts, such as with families, in groups, and in schools. Helpful templates for treatment planning and case documentation are also included, making the book a valuable resource for both training courses and practicing professionals in play therapy, clinical mental health counseling, child counseling, school counseling, child and family social work, marriage and family therapy, and clinical child psychology. Key Features: Delivers step-by-step guidance for using directive play therapy techniques--the first book to do so Addresses theoretical basis, research support, and practical techniques for a diverse range of therapies Covers varied settings and contexts including school, clinical, group, and family settings Includes case studies Provides templates for treatment planning and case documentation

Political Economy Goes to the Movies provides an introduction to political economy using a wide range of popular films and documentaries as the objects of analysis. The work helps readers to understand and analyze the economic and related political, cultural, and ecological relationships depicted in selected films. This is achieved through the lens of past and present economic theories and in the context of debates over the dynamic influence of economics on individual life chances. Film may have more to teach us about the real world than the abstractions of certain economic theories. A world of income inequality, child labor in mills and mines, local rebellions against land seizures, and wars triggered by economic conflicts provide the context for many films mirroring real world events. Some films depict the interacting and intersecting political, economic, cultural, and ecological contexts within and between variant economic relationships, whereas other films show “catastrophes” such as economic depressions, disruptive social transitions, violent revolutions, and existential environmental degradation – a world in disequilibrium. Films allow us to see a panoply of human social relationships and related problems, even to explore cataclysmic moments in our species life, but not to necessarily see the why of these relationships and problems. Simultaneously, mainstream economics has severe constraints on what can be analyzed. Film exposes this weakness of the

Online Library Trauma Focused Cognitive Behavioral Therapy

mainstream model. Twelve Years a Slave, Trumbo, The Big Short and others are analyzed for their realism by referencing documented historical social events, and behavioral economics provides further data for analyzing the realism of social interaction within the films. Exploring events and contexts absent from the typical economics text or the basic level economics classes, this work is essential reading for students and scholars of political economy in both economics and politics departments, as well as those of pluralist economics and Marxist economics.

The effects of trauma and abuse on children can be long-lasting, acute and damaging. Evidence suggests that cognitive behavioural therapy (CBT) is a highly effective form of psychotherapy to help children to overcome these effects. This book uses an evidence-based CBT treatment model to assist children and adolescents aged 9–15 years to resolve trauma symptoms and increase their coping skills. The approach is made up of 16 step-by-step sessions to carry out with the young person, and includes worksheets and fun activities using arts and crafts. The model uses four phases: strengthening the child's psychosocial context; enhancing their coping skills; processing their trauma through gradual exposure; and addressing special issues that the child may have and preventing relapse. The child keeps a scrapbook for the duration of the programme in which they keep worksheets, artwork and any other activities they carry out. The approach is designed for individual therapy but also includes sessions for parents

and caregivers. With photocopiable worksheets and easy to follow sessions, this will be an invaluable resource for all practitioners working with traumatised and abused children, including therapists, psychologists, counsellors, health professionals and social workers.

The book collates the latest innovations in cognitive behavioral therapy for child and adolescent anxiety disorders, obsessive-compulsive disorder (OCD) and post-traumatic stress disorder (PTSD).

Post-traumatic stress disorder (PTSD) is an extremely debilitating anxiety condition that can occur after exposure to a terrifying event or ordeal. Although many know that this mental health issue affects veterans of war, many may not know that it also affects victims of domestic violence, sexual violence, natural disasters, crime, car accidents and accidents in the workplace. No matter the cause of their illness, people with PTSD will often relive their traumatic experience in the form of flashbacks, memories, nightmares, and frightening thoughts. This is especially true when they are exposed to events or objects that remind them of their trauma. Left untreated, PTSD can lead to emotional numbness, insomnia, addiction, anxiety, depression, and even suicide. In *The PTSD Workbook, Second Edition*, psychologists and trauma experts Mary Beth Williams and Soili Poijula outline techniques and interventions used by PTSD

experts from around the world to offer trauma survivors the most effective tools available to conquer their most distressing trauma-related symptoms, whether they are a veteran, a rape survivor, or a crime victim. Based in cognitive behavioral therapy (CBT), the book is extremely accessible and easy-to-use, offering evidence-based therapy at a low cost. This new edition features chapters focusing on veterans with PTSD, the link between cortisol and adrenaline and its role in PTSD and overall mental health, and the mind-body component of PTSD. This book is designed to arm PTSD survivors with the emotional resilience they need to get their lives back together after a traumatic event.

This volume explores illusionism as a much larger phenomenon than optical illusion, magic shows, or special effects, as a vital part of how we perceive, process, and shape the world in which we live. Considering different cultural practices characterized by illusionism, this book suggests a new approach to illusion via media theory. Each of the chapters analyses a specific kind of illusionistic practice and the concept of illusionism it entails in a given context, including philosophy, perception and cognitive theory, performance magic, occultism, optics, physiology, early cinema, cartomancy, spiritualism, architecture, shamanic rituals, and theoretical physics, to show the diversity of shapes that illusionism and illusions can take. The book provides detailed

Online Library Trauma Focused Cognitive Behavioral Therapy

analyses of illusions within performance and ritual magic, philosophy, art history and psychology as well as a first approach to the study of illusions outside of these established fields. It aims to find ways of identifying and analysing a wider range of illusions in the humanities. This multidisciplinary and comprehensive volume will appeal to scholars and students with an interest in media and culture, theatre and performance, philosophy, sociology, politics and religion. This handbook presents the current evidence-based psychological treatments for trauma related disorders in childhood and adolescence and in addition provides clearly structured, up-to-date information on the basic principles of traumatic stress research and practice in that age group, covering epidemiology, developmental issues, pathogenetic models, diagnostics, and assessment. Each of the chapters on treatment, which form the core of the book, begins with a summary of the theoretical underpinnings of the approach, followed by a case presentation illustrating the treatment protocol session by session, an analysis of

Online Library Trauma Focused Cognitive Behavioral Therapy

special challenges typically encountered in implementing this treatment, and an overview of the current evidence base for the treatment approach. A special section considers modern treatments in particular settings, such as schools, hospitals, and juvenile justice systems, and the concluding chapters provide an integrative discussion on how to treat traumatized children and adolescents and an outlook. The book will be invaluable for clinical child and adolescent psychologists, child and adolescent psychiatrists, psychotherapists, and other mental health professionals working with traumatized children and adolescents.
