A new method developed to accurately calibrate the time-varied gain echosounder receivers is described.

Sampling results are compared to the old method of calibration and errors in biomass estimates produced by the old method are presented.

A comprehensive work which examines modern instrumentation for testing and measurement. The author groups together common families of electronic instruments for ease of reference, provides discussion of VLSIs and ASICs, and describes the design trends of future instrument groups.

Includes abstracts and introduction in French.
