In this compelling middle-grade graphic novel *The Leak*, Ruth, a young journalist, is determined to uncover a secret that threatens her town. Ruth Keller is brash and precocious; she argues with her dentist, her parents, and her teachers. So, when she discovers a strange black slime in the man-made lake of her suburban neighborhood, she decides to investigate. Fortified by the encouragement of those around her, Ruth seeks the truth at all costs, even if it means taking on the rich local country club owner, who she believes is responsible for the pollution. Between the teasing of former friends, and a sudden viral spotlight, Ruth discovers how difficult it is for a journalist to take a stand for what's right in the face of critique and controversy. From writer Kate Reed Petty and illustrator Andrea Bell, comes a story about corruption, pollution, and freedom of the press, and the young journalist at the center of it all. This title analyzes distributed Earth observation missions from different perspectives. In

particular, the issues arising when the payloads are distributed on different satellites are considered from both the theoretical and practical points of view. Moreover, the problems of designing, measuring, and controlling relative trajectories are thoroughly presented in relation to theory and applicable technologies. Then, the technological challenges to design satellites able to support such missions are tackled. An ample and detailed description of missions and studies complements the book subject.

A literary phenomenon, Jean M. Auel's prehistoric odyssey is one of the best-loved sagas of our time. Employing meticulous research and the consummate artistry of a master storyteller, Auel paints a vivid panorama of the dawn of modern humans. Through Ayla, an orphaned girl who grows into a beautiful and courageous young woman, we are swept up in the harsh and beautiful Ice Age world, home to the Clan of the Cave Bear. Now, for the first time, all six novels in the Earth's Children® series are available in one convenient eBook bundle: THE CLAN OF THE CAVE BEAR THE VALLEY OF HORSES THE MAMMOTH HUNTERS THE PLAINS OF PASSAGE THE SHELTERS OF STONE THE LAND OF PAINTED CAVES A natural disaster leaves a young girl wandering alone in an unfamiliar and dangerous land until she is found by a woman of the Clan, people very different from her own kind. To them, blond, blue-eyed Ayla looks peculiar and ugly—she is one of the Others, those who have moved into their ancient homeland; but Iza cannot leave the girl to die and takes her with

them. Iza and Creb, the old Mog-ur, grow to love her, and as Ayla learns the ways of the Clan and Iza's way of healing, most come to accept her. But the brutal and proud youth who is destined to become the Clan's next leader sees Ayla's differences as a threat to his authority. He develops a deep and abiding hatred for the strange girl of the Others who lives in their midst, and is determined to get his revenge. Praise for the Earth's Children® series "Auel is a highly imaginative writer. She humanizes prehistory and gives it immediacy and clarity."—The New York Times Book Review "Storytelling in the grand tradition . . . From the violent panorama of spring on the steppes to musicians jamming on a mammoth-bone marimba, Auel's books are a stunning example of world building. They join the short list of books, like James Clavell's Shogun and Frank Herbert's Dune, that depict exotic societies so vividly that readers almost regard them as 'survival manuals.'"—Vogue "Jean Auel has established herself as one of our premier storytellers. . . . Her narrative skill is supreme."—Chicago Tribune "Pure entertainment at its sublime, wholly exhilarating best."—Los Angeles Times "Readers who fell in love with little Ayla will no doubt revel in her prehistoric womanhood."—People "Lively and interesting, enhanced greatly by the vividly colored backdrop of early humanity . . . Auel is a prodigious researcher."—The Washington Post Book World "Among modern epic spinners, Auel has few

peers. . . . She deftly creates a whole world, giving a sense of the origins of class, ethnic, and cultural differences that alternately divide and fascinate us today.”—Kirkus Reviews (starred review)

Every night, Jonathan Hart dreams of a cracked wasteland in the setting sun. By morning the image retreats to his subconscious mind. Again, he finds himself in a city of symmetrical people, where he is anonymous in his perfection. A voice in his head tells him there is more to life than following the will of his supreme leader, Liam Mail, and

that there is more to his own life than he can remember. That there are things he can't remember about the city of symmetricals that could tear down the fabric of his world. Now, Jonathan must fight against the forces that suppress his memories before his mind is damaged beyond repair. Can Jonathan expose the twisted truth about the symmetrical elite, and in doing so restore society to its flawed asymmetrical origins? Or will his efforts explode and create a MEMORY LEAK?

Past Vietnam War histories have tended to record the sappers' work as peripheral. This book attempts to highlight the skill, ingenuity, and courage they displayed throughout the entire war. It chronicles their experiences—both good and bad—that are based around their operations, with an emphasis on the personal experiences of those involved.

This book investigates, through the problem of the earth's shape, part of the development of post-Newtonian mechanics by the Parisian scientific community during the first half of the eighteenth century. In the Principia Newton first raised the question of the earth's shape. John Greenberg shows how continental scholars outside France influenced efforts in Paris to solve the problem, and he also demonstrates that Parisian scholars, including Bouguer and Fontaine, did work that Alexis-Claude Clairaut used in developing his mature theory of the earth's shape. The evolution of Parisian mechanics proved not to be the replacement of a Cartesian paradigm by a Newtonian one, a

replacement that might be expected from Thomas Kuhn's formulations about scientific revolutions, but a complex process instead involving many areas of research and contributions of different kinds from the entire scientific world. Greenberg both explores the myriad of technical problems that underlie the historical development of part of post-Newtonian mechanics, which have only been rarely analyzed by Western scholars, and embeds his technical discussion in a framework that involves social and institutional history politics, and biography. Instead of focusing exclusively on the historiographical problem, Greenberg shows as well that international scientific communication was as much a vital part of the scientific progress of individual nations during the first half of the eighteenth century as it is today.

Lomonosov State University (Nuclear and Elementary Particle Physics Division, the Team of Theoretical Physics), my supervisor Professor D. I. Blokhintsev planned for me, as a winner of a Red Diploma, to continue my education as an aspirant (a graduate student) to prepare for Ph. D. in his very secret Object in the framework of what was in those time called the Atomic Problem. To my regret the KGB withheld permission, and I, together with other Jewish students who had graduated Nuclear Divisions of Moscow and Leningrad Universities and Institutes, were faced with a real prospect of being without any work. It was our good fortune that at that time there was being brought into being the new Cosmic Ray Project (what at that time was also very secret, but not as secret as the Atomic Problem), and after some time we were directed to work on this Project. It was organized and headed by Prof. S. N. Vernov (President of All-Union Section of Cosmic Rays) and Prof. N. V. Pushkov (Director of IZMIRAN); Prof. E. L. Feinberg headed the theoretical part of the Project.
