Can Evidence Based Medicine (EBM) and Complementary and Alternative Medicine (CAM) find common ground? A distinguished historian of medicine, John S. Haller Jr., explores the epistemological foundations of EBM and the challenges these conceptual tools present for both conventional and alternative therapies. As he explores a possible reconciliation between their conflicting approaches, Haller maintains a healthy, scientific skepticism yet finds promise in select complementary and alternative (CAM) therapies. Haller elucidates recent research on the placebo effect and shows how a new engagement between EBM and CAM might lead to a more productive medical practice that includes both the objectivity of evidence-based medicine and the subjective truth of the physician-patient relationship. Haller's book tours key topics in the standoff between EBM and CAM: how and why the double blinded, randomized clinical trial

(RCT) came to be considered the gold standard in modern medicine; the challenge of postmodern medicine as it counters the positivism of evidence-based medicine; and the politics of modern CAM and the rise of the National Center for Complementary and Alternative Medicine. He conducts an in-depth case study of homeopathy, explaining why it has emerged as a poster-child for CAM, and assesses CAM's popularity despite its poor performance in clinical trials. Haller concludes with hope, showing how new experimental protocols might tease out the evidentiary basis for the placebo effect and establish a foundation for some reconciliation between EBM and CAM.

The major objective of this book is to review in detail health problems occurring with significant frequency in aging adults which are proposed to be treated or ameliorated using nutraceuticals as foods and dietary supplements as well as other complementary and alternative therapies. Chapters primarily focusing on nutrients have been excluded to maintain a focus on complementary and alternative medicine (CAM). The book is divided into three general sections: 1.

Nutraceuticals and Botanicals in Health Promotion - including Specific Nutraceuticals Used in Treating Aged; and General Nutraceutical Approaches to Therapy with emphasis on cancer. 2. Non-nutritional CAM Therapies – including Mind-mediated Therapies; and Physically Applied CAM Therapies 3. Non-dietary Complementary and Alternative Medicine (CAM) Use and Benefits to the Elderly in Health Identifies the important nutritional requirements of the aging population, and how nutraceuticals and other CAM options affect those Addresses the many disease entities and cancers are found with higher frequency in the aged, including cancer, trauma, or infectious disease that can alter intakes of nutraceutical containing foods and/or requirements for various nutrients. Explores the nutritional materials botanical extracts and components that can have important health promotion benefits and risks, to ensure safe consumption Reviews the frequently used non-traditional and often unproven CAM therapies, beyond nutritional and nutraceutical supplements, including a variety of physical and psychosocial treatments.

The popularity of complementary and alternative medicine (CAM) has risen sharply in the last decade. This consumer driven movement affects all specialties of conventional medicine and can influence the decision-making process and practice of primary care physicians. It is critical for today's medical professionals to be familiar with the potential benefits, adverse effects, and interactions of different CAM therapies. Textbook of Complementary and Alternative Medicine presents a sound academic understanding of the healing therapies, approaches, and systems of CAM. The editors take a two-pronged approach to the subject. They discuss the underlying principles and their relevance to conventional medicine and provide in-depth information on specific therapies for common medical conditions. The book focuses on the CAM therapies most often used and therefore, most likely to effect a physician's practice. There are a number of CAM books available. However, most of authors of these books are CAM practitioners, neuropathic physicians, or both. This book is unique in that the contributors are academic physicians and other mainstream professionals. Thoroughly referenced, Textbook of Complementary and Alternative Medicine is a science-based guide to the wide range of herbal and other CAM therapies and to understanding their application to human health and their interaction with conventional medicine.

This collection expands the history of Chinese medicine by bridging the philosophical concerns of epistemology and the history and cultural

politics of transregional medical formations. Topics range from the spread of ginkgo's popularity from East Asia to the West to the appeal of acupuncture for complementing in-vitro fertilisation regimens, from the modernisation of Chinese anatomy and forensic science to the evolving perceptions of the clinical efficacy of Chinese medicine. The individual essays cohere around the powerful theoretical-methodological approach, 'historical epistemology', which challenges the seemingly constant and timeless status of such rudimentary but pivotal dimensions of scientific process as knowledge, reason, argument, objectivity, evidence, fact, and truth. In studying the globalising role of medical objects, the contested premise of medical authority and legitimacy, and the syncretic transformations of metaphysical and ontological knowledge, contributors illuminate how the breadth of the historical study of Chinese medicine and its practices of knowledge-making in the modern period must be at once philosophical and transnational in scope.

Written for pharmacists, this is an introduction to the most commonly used complementary disciplines. The book covers theory, practical aspects and current scientific thinking.

The provision and use of traditional, complementary and alternative medicine (CAM) has been growing globally over the last 40 years. As CAM develops alongside - and sometimes integrates with - conventional medicine, this handbook provides the first

major overview of its regulation and professionalization from social science and legal perspectives. The Routledge Handbook of Complementary and Alternative Medicine draws on historical and international comparative research to provide a rigorous and thematic examination of the field. It argues that many popular and policy debates are stuck in a polarized and largely asocial discourse, and that interdisciplinary social science perspectives, theorising diversity in the field, provide a much more robust evidence base for policy and practice in the field. Divided into four sections, the handbook covers: analytical frameworks power, professions and health spaces risk and regulation perspectives for the future. This important volume will interest social science and legal scholars researching complementary and alternative medicine, professional identify and health care regulation, as well as historians and health policymakers and regulators.

This report is structured in five parts: national framework for traditional and complementary medicine (T&CM); product regulation; practices and practitioners; the challenges faced by countries; and, finally, the country profiles. Apart from the section on practices and practitioners, the report is consistent with the format of the report of the first global survey in order to provide a useful comparison. The section on practices and practitioners, which covers providers, education and health insurance, is a new section incorporated to reflect the emerging trends in T&CM and to gather new information regarding these topics at a national level. All new information received has been incorporated into individual country profiles and data graphs. The report captures the three phases of progress made by Member States; that is, before and after the first WHO Traditional Medicine Strategy (1999-2005), from the first global survey to the second global survey (2005-2012) and from the second survey to the most recent timeline (2012-2018).

Complementary Therapies (CT) refers to the practices, products, or health systems that are outside the realm of conventional medicine, used to treat disease or to promote health and well-being. Defining CT is difficult, because the field is very broad and constantly changing. The title of this book includes the words body, mind, and soul. The body and the mind (and their reciprocal relations) have been extensively studied scientifically. What about the soul? The book brings some points about this new ground in CT. We hope you find in the present work the sincere desire to collaborate with the dissemination of knowledge. May this book be useful and pleasant to you.

The quality of cancer and palliative care is going through unprecedented change and development as a result of policy initiatives. The impact of these policies on education is unparalleled and it is essential that clinicians and educationalists are aware of the policy formation processes and educational strategies that meet the demands of these changing times. This book takes a holistic approach to patient care and draws on the diverse experience in hospices and highlights best practice to present a comprehensive and practical guide. However, it does more. New topics are given an educational perspective; those with limited educational experience are given sound advice; the implication of policy change is outlined. This is an important book and one which should be read by all clinicians, educators and managers responsible for improving services in cancer and palliative care.

Sleep is one of the key underpinnings of human health yet sleep deprivation and impaired sleep are rampant in modern life. Sleep

and wake are a true yin yang phenomenon, each affecting the other and together forming a harmonious whole. Healthy sleep is a whole-body process impacted by circadian rhythm, daily activities, and emotional well-being, among others. When properly aligned, these work in concert to produce restorative and refreshing sleep. When not in balance, however, sleep disorders result. Yet too often, the conventional medical approach to treatment of sleep disorders is compartmentalized, failing to recognize all of the complex interactions that are involved. The first book in its field, Integrative Sleep Medicine offers a true comprehensive approach to sleep and sleep disorders by delineating the many factors that interplay into healthy sleep. Health care practitioners can learn how to better manage their patients with sleep disorders by integrating complementary and conventional approaches. Using an evidence-based approach throughout, this book describes the basics of normal sleep, then delves into the foundations of integrative sleep medicine, including the circadian rhythm, mind-body sleep connection, light, dreaming, the gastrointestinal system, and botanicals and supplements. Specific sleep issues and disorders are then addressed from an integrative perspective, including insomnia, obstructive sleep apnea, sleep related movement disorders, and parasomnias.
