Current Environmental Issues and Challenges Giacomo Cao,Roberto Orrù,2014-04-29 Few books currently exist that cover such a wide spectrum of topics. The chapters dealing with air pollution from mobile sources, air pollution and health

effects and air quality modelling fall into the air pollution category while the ones related to microalgae for carbon dioxide sequestration/biofuels production, fuel cells, and solar energy technology, respectively, can be ascribed to the energy topic. Several technologies to handle a wide spectrum of environmental pollutants are taken into account in numerous chapters. The chapter on biodiversity is clearly related to the conservation issue, while the water pollution subject is tackled by the chapter on water quality monitoring. Finally, a general analysis on green business, as well as a chapter on grid/cloud computing technology for collaborative problem solving and shared resources management conclude the work. Because of its breadth of coverage, this book is particularly useful as a graduate text.

Urban, Regional and National Planning (UNRENAP) T. Hasegawa,K. Inoue,2014-05-18 Urban, Regional and National Planning (UNRENAP): Environmental Aspects contains the proceedings of a Workshop on Urban, Regional and National Planning held in Kyoto, Japan, on August 5-6, 1977 under the auspices of the International Federation of Automatic Control. The workshop provided an opportunity to address the environmental aspects of urban, regional, and national planning. The discussions are organized around the themes of modeling, evaluation, simulation, and optimization. Comprised of 34 chapters, this book begins by outlining an alternative approach to environmental modeling in which comprehensive models are replaced by a network of simpler models, focused on specific aspects of the reality and sponsored by corresponding decision-making organizations. The reader is then introduced to some socio-economic aspects of health care planning; structural modeling in a class of systems by fuzzy sets theory; and the role of legal measures in the orientation of urban growth. Subsequent chapters deal with the use of Environmental Assessment Scale as a technique for environmental evaluation; computer simulation of economy management systems; and optimal control models of regional economies. A model for pollution reduction and control is also described. This monograph will be of interest to urban planners and environmental policymakers.

The European Nitrogen Assessment Mark A. Sutton,Clare M. Howard,Jan Willem Erisman,Gilles Billen,Albert Bleeker,Peringe Grennfelt,Hans van Grinsven,Bruna Grizzetti,2011-04-14 Presenting the first continental-scale assessment of reactive nitrogen in the environment, this book sets the related environmental problems in context by providing a multidisciplinary introduction to the nitrogen cycle processes. Issues of upscaling from farm plot and city to national and continental scales are addressed in detail with emphasis on opportunities for better management at local to global levels. The five key societal threats posed by reactive nitrogen are assessed, providing a framework for joined-up management of the nitrogen cycle in Europe, including the first cost-benefit analysis for different reactive nitrogen forms and future scenarios. Incorporating comprehensive maps, a handy technical synopsis and a summary for policy makers, this landmark volume is an

essential reference for academic researchers across a wide range of disciplines, as well as stakeholders and policy makers. It is also a valuable tool in communicating the key environmental issues and future challenges to the wider public.
