"The book 'Virus Mania' has been written with the care of a master-craftsman, courageously evaluating the medical establishment, the corporate elites and the powerful government funding institutions." Wolfgang Weuffen, MD, Professor of Microbiology and Infectious Epidemiology "The book 'Virus-Wahn' can be called the first work in which the errors, frauds and general misinformations being spread by official bodies about doubtful or non-virus infections are completely exposed." Gordon T. Stewart, MD, professor of public health and former WHO advisor - - - The population is terrified by reports of so-called COVID-19, measles, swine flu, SARS, BSE, AIDS or polio. However, the authors of "Virus Mania," investigative journalist Torsten Engelbrecht, Dr. Claus Köhnlein, MD, Dr. Samantha Bailey, MD, and Dr. Stefano Scoglio, BSc PhD, show that this fearmongering is unfounded and that virus mayhem ignores basic scientific facts: The existence, the pathogenicity and the deadly effects of these agents have never been proven. The book "Virus Mania" will also outline how modern medicine uses dubious indirect lab tools claiming to prove the existence of viruses such as antibody tests and the polymerase chain reaction (PCR). The alleged viruses may be, in fact, also be seen as particles produced by the cells themselves as a consequence of certain stress factors such as drugs. These particles are then "picked up" by antibody and PCR tests and mistakenly interpreted as epidemic-causing viruses. The authors analyze all real causes of the illnesses named COVID-19, avian flu, AIDS or Spanish flu, among them pharmaceuticals, lifestyle drugs, pesticides, heavy metals, pollution, malnutrition and stress. To substantiate it, the authors cite dozens of highly renowned scientists, among them the Nobel laureates Kary Mullis, Barbara McClintock, Walter Gilbert and Sir Frank Macfarlane Burnet as well as microbiologist and Pulitzer Prize winner René Dubos, and it presents more than 1,400 solid scientific references. The topic of "Virus Mania" is of pivotal significance. Drug makers and top scientists rake in enormous sums of money and the media boosts its audience ratings and circulations with sensationalized reporting (the coverage of the "New York Times" and "Der Spiegel" are specifically analyzed).The enlightenment about the real causes and true necessities for prevention and cure of illnesses is falling by the wayside. The dangerous decline in vaccinations in many developed countries is at the heart of a lively debate that confirms how important the subject is today. Vaccinations are among mankind's most important scientific discoveries, yet they continue to be viewed with suspicion by part of the public – the victims of disinformation campaigns, instrumentalization and unfounded fears. There is, however, also an evolutionary explanation for these irrational beliefs, and countering the growing social opposition will be extremely difficult without grasping it. This book, which sheds new light on the safety and importance of vaccinations, is intended both for parents and those readers who want to understand the role of vaccinations in contemporary society, where the ease of access to knowledge is both a great opportunity and a great responsibility. The chapters follow a historical progression and conclude with a discussion of the most recent cognitive theories on how to overcome this opposition to vaccinations.

Nel libro sono descritte in chiave mistica alcune cronache apocalittiche, divise in varie attività bibliche tramandate: anticristo, falsi profeti, lupi travestiti da agnelli compresi, rappresentati da attivisti atei e complici, uniti in categorie globali di governo: sia laico, che religioso, Queste, si stanno ora impegnando nell'intento comune: ottenere il depopolamento mondiale con l'equivoco abuso universale, sulla definizione impropria di medicinali "sperimentali", dalle finalità informatiche sulla riprogrammazione "irreversibile" delle cellule umane, il cui nome scientifico non è quello letterale arbitrariamente attribuitogli e i cui effetti futuri, sono ancora ignoti a sorpresa.

America's hegemonic project in the post 9/11 era is the "Globalization of War" whereby the U.S.-NATO military machine coupled with covert intelligence operations, economic sanctions and the thrust of "regime change" is deployed in all major regions of the world. The threat of pre-emptive nuclear war is also used to black-mail countries into submission. This "Long War against Humanity" is carried out at the height of the most serious economic crisis in modern history. It is intimately related to a process of global financial restructuring, which has resulted in the collapse of national economies and the impoverishment of large sectors of the World population. The ultimate objective is World conquest under the cloak of "human rights" and "Western democracy." "Professor Michel Chossudovsky is the most realistic of all foreign policy commentators. He is a model of integrity in analysis, his book provides an honest appraisal of the extreme danger that U.S. hegemonic neoconservatism poses to life on earth." Dr. Paul Craig Roberts, former Assistant Secretary of the U.S. Treasury "The Globalization of War comprises war on two fronts: those countries that can either be "bought" or destabilized. In other cases, insurrection, riots and wars are used to solicit U.S. military intervention. Michel Chossudovsky's book is a must read for anyone who prefers peace and hope to perpetual war, death, dislocation and despair." Hon. Paul Hellyer, former Canadian Minister of National Defence "Michel Chossudovsky describes globalization as a hegemonic weapon that empowers the financial elites and enslaves 99 percent of the world's population. "The Globalization of War" is diplomatic dynamite and the fuse is burning rapidly." Michael Carmichael, President, the Planetary Movement

On July 22, 2009, a special meeting was held with twenty-four leading scientists at the National Institutes of Health to discuss early findings that a newly discovered retrovirus was linked to chronic fatigue syndrome (CFS), prostate cancer, lymphoma, and eventually neurodevelopmental disorders in children. When Dr. Judy Mikovits finished her presentation the room was silent for a moment, then one of the scientists said, "Oh my God!" The resulting investigation would be like no other in science. For Dr. Mikovits, a twenty-year veteran of the National Cancer Institute, this was the midpoint of a five-year journey that would start with the founding of the Whittemore-Peterson Institute for Neuro-Immune Disease at the University of Nevada, Reno, and end with her as a witness for the federal government against her former employer, Harvey Whittemore, for illegal campaign contributions to Senate Majority Leader Harry Reid. On this journey Dr. Mikovits would face the scientific prejudices against CFS, wander into the minefield that is autism, and through it all struggle to maintain her faith in God and the profession to which she had dedicated her life. This is a story for anybody interested in the peril and promise of science at the very highest levels in our country.

States seldom resort to war to overthrow their adversaries. They are more likely to attempt to covertly change the opposing regime, by assassinating a foreign leader, sponsoring a coup d'état, meddling in a democratic election, or secretly aiding foreign dissident groups. In *Covert Regime Change*, Lindsey A. O'Rourke shows us how states really act when trying to overthrow another state. She argues that conventional focus on overt cases misses the basic causes of regime change. O'Rourke provides substantive evidence of types of security interests that drive states to intervene. Offensive operations aim to overthrow a current military rival or break up a rival alliance. Preventive operations seek to stop a state from taking certain actions, such as joining a rival alliance, that may make them a future security threat. Hegemonic operations try to maintain a hierarchical relationship between the intervening state and the target government. Despite the prevalence of covert attempts at regime change, most operations fail to remain covert and spark blowback in unanticipated ways. *Covert Regime Change* assembles an original dataset of all American regime change operations during the Cold War. This fund of information shows the United States was ten times more likely to try covert rather than overt regime change during the Cold War. Her dataset allows O'Rourke to address three foundational questions: What motivates states to attempt foreign regime change? Why do states prefer to conduct these operations covertly rather than overtly? How successful are such missions in achieving their foreign policy goals?

A heartfelt, deeply personal book that shines a bright light on the values and principles that Bill Gates Sr. has learned over a lifetime of "showing up": lessons that he learned growing up during the Great Depression, and that he instilled in his children and continues to practice on the world stage as the co-chair of the Bill & Melinda Gates Foundation. Through the course of several dozen narratives arranged in roughly chronological fashion, Gates introduces the people and experiences that influenced his thinking and guided his moral compass. Among them: the scoutmaster who taught him about teamwork and self reliance; and his famous son, Trey, whose curiosity and passion for computers and software led him to ultimately co-found Microsoft. Through revealing stories of his daughters, Kristi and Libby; his late wife, Mary, and his current wife, Mimi; and his work with Nelson Mandela and Jimmy Carter, among others, he discusses the importance of hard work, getting along, honoring a confidence, speaking out, and much more. *Showing Up for Life* translates one man's experiences over fourscore years of living into an inspiring road map for readers everywhere. As Bill Gates Sr. puts it: "I'm 83 years old. Representing the Bill & Melinda Gates Foundation and everyone who is a part of it has given me the opportunity to see more of the world and its rich possibilities than most people ever do. I never imagined that I'd be working this late in life, or enjoying it so much."

"Verità e bugie della medicina" è un'opera dal duplice aspetto: da un lato la divulgazione scientifica, dall'altro un'inchiesta di tipo giornalistico che mette in evidenza discordanze tra presunte verità scientifiche e ricerche rigorose che dimostrano conclusioni spesso opposte. Tratta d'importanti malattie quali osteoporosi, ipercolesterolemia, malattie autoimmuni, diabete, ecc., mentre due grandi capitoli sono dedicati al cancro e alle vaccinazioni. Del cancro vengono approfonditi gli studi e le scoperte del medico tedesco Hamer e dell'oncologo italiano Tullio Simoncini. Il primo ha scoperto che tutte le persone ammalate di cancro hanno subito nel periodo precedente la malattia un trauma psichico, mentre Simoncini cura il cancro utilizzando il comune bicarbonato di sodio. L'altro grande capitolo è quello dedicato alle vaccinazioni, nel quale vengono messe in evidenza le false nozioni divulgate dalla scienza, nonché il meccanismo d'azione dei vaccini, i danni provocati e tutta una parte dedicata alle sentenze giudiziarie e alla tutela legale degli obiettori.

*Jabbed* demonstrates that the medical procedure hailed as the greatest medical advancement in history—vaccines—is a racket run by criminals and gullible believers who have replaced vaccine science with the religion of vaccinology. Vaccine marketers teach believers to fear, shame, and scapegoat anyone foolish enough to question the sanctity of vaccines. Such an environment is not the domain of science; rather it's the breeding ground of tyranny. *Jabbed* exposes this tyranny. From polio and smallpox to medical journals, medical curricula, congressional hearings, regulatory policies, White House statements, and executive orders, *Jabbed* shines light on the dark underbelly of Big Pharma, Big Medicine, and Big Government. A vaccine informed public is the only thing that will have the power to stop vaccine industry sociopaths and to hold them accountable for their crimes. *Jabbed* informs and immunizes against three of the most dangerous epidemics in history: tyranny, greed, and corruption. Once immunized, the growing vaccine-informed community will have the power to stand up and dismantle the vaccine paradigm and program and to punish the perpetrators of what may well be the greatest medical fraud ever perpetrated on the human race: vaccines.

The annual—and essential—collection of the newest voices in short fiction, selected this year by Nana Kwame Adjei-Brenyah, Kali Fajardo-Anstine, and Beth Piatote. Who are the most promising short story writers working today? Where do we look to discover the future stars of literary fiction? This book will offer a dozen answers to these questions. The stories collected here represent the most recent winners of the PEN/Robert J. Dau Short Story Prize for Emerging Writers, which recognizes twelve writers who have made outstanding debuts in literary magazines in the previous year. They are chosen by a panel of distinguished judges, themselves innovators of the short story form: Nana Kwame Adjei-Brenyah, Kali Fajardo-Anstine, and Beth Piatote. Each piece comes with an introduction by its original editors, whose commentaries provide valuable insight into what magazines are looking for in their submissions, and showcase the vital work they do to nurture literature's newest voices.

Originally published from 1932 to 1943, Laura Ingalls Wilder's Little House books are classics of children's literature, beloved by millions. But readers who last enjoyed them as children may be astonished at the quiet poetry of Wilder's prose and the force and poignancy of her portrait of the lives of American pioneers. Now The Library of America and editor Caroline Fraser present a definitive boxed set that affirms Wilder's place in the American canon, reintroducing these enduring works to readers young and old. Here, for the first time in two collectible hardcover volumes, are all eight Little House novels—brilliant narratives of the early life of Laura Ingalls and her family as they grow up with the country in the woods, on the plains, and finally in the small towns of the advancing American frontier—plus the posthumous novella *The First Four Years*, which recounts the early years of the author's marriage to Almanzo Wilder. As a special feature, four rare autobiographical pieces address the need for historical accuracy in children's literature, reveal real life events not included in the novels, and answer the inevitable question: what happened next? Contains: VOLUME ONE Little House in the Big Woods Farmer Boy Little House on the Prairie On the Banks of Plum Creek Library of America volume #229 VOLUME TWO By the Shores of Silver Lake The Long Winter Little Town on the Prairie These Happy Golden Years The First Four Years Library of America volume #230 Each volume features deluxe three-part bindings, a newly-researched chronology of Laura Ingalls Wilder's life and career, and helpful notes. The volumes are also available separately with standard Library of America series bindings and jackets.

The only book that explores the vaccination issue from political, ethical, psychological, aesthetic, and spiritual perspectives. Using principles of general semantics to recognize propaganda, particularly medical propaganda, it points to the power of the media to create our reality. James suggests an unusual consciousness-raising plan of action to insure freedom of choice and non-harrassment of persons

who choose to stay off the vaccine bandwagon. The author's controversial position is supported throughout the book by the scientific discoveries of researchers who have received little recognition in orthodox medical literature. This new, completely revised edition shows: how vaccinations damage the immune and nervous systems, the vaccine-drug-AIDS connection, how to become propaganda-proof, and how to develop new paradigms of health and preventive medicine.

This report from the Council for International Organizations of Medical Sciences (CIOMS) in collaboration with WHO covers the activities and outputs of the CIOMS/WHO Working Group on Vaccine Pharmacovigilance (2005-2010). This working group brought together experts from both industrialized and emerging countries representing regulatory agencies, vaccine industry, national and international public health bodies including WHO and CIOMS, academia and clinical care, contributing from their different perspectives. The report covers general terms and definitions for vaccine safety and discusses the application of such harmonized tools in vaccine safety surveillance and studies. As well, the report highlights case definitions for adverse events typically reported for vaccines. The report is addressed to those engaged in vaccine safety data collection and evaluation, and will also make a useful reading for others who want to familiarise themselves with vaccine safety terminology.

Italian philosopher Giorgio Agamben presents an account of the political upheavals that ensued as the COVID-19 pandemic brought his country—and with it his countrymen's personal liberties—to a crashing halt. While controversial, Agamben's reflections on the transformation of Western democracies hold implications far beyond any present crisis.

Millions of people have been misled regarding the causes and consequences of September 11. When people across the US and around the World find out that Al Qaeda is not an outside enemy but a creation of US foreign policy and the CIA, the legitimacy of the bipartisan war agenda will tumble like a deck of cards." Across the land, the image of an "outside enemy" is instilled in the consciousness of Americans. Al Qaeda is threatening America and the world. The repeal of democracy under the Patriot legislation is portrayed as a means to providing "domestic security" and upholding civil liberties. The 9/11 Commission Report destroys the historical record of US covert support to international terrorism, while creating the illusion that America and "Western Civilization" are threatened. In turn, the various terrorist warnings and code orange alerts have created, across America, an atmosphere of fear and intimidation.

Medications for everything from depression and anxiety to ADHD and insomnia are being prescribed in alarming numbers across the country, but the "cure" is often worse than the original problem. Medication Madness is a fascinating, frightening, and dramatic look at the role that psychiatric medications have played in fifty cases of suicide, murder, and other violent, criminal, and bizarre behaviors. As a psychiatrist who believes in holding people responsible for their conduct, the weight of scientific evidence and years of clinical experience eventually convinced Dr. Breggin that psychiatric drugs frequently cause individuals to lose their judgment and their ability to control their emotions and actions. Medication Madness raises and examines the issues surrounding personal responsibility when behavior seems driven by drug-induced adverse reactions and intoxication. Dr. Breggin personally evaluated the cases in the book in his role as a treating psychiatrist, consultant or medical expert. He interviewed survivors and witnesses, and reviewed extensive medical, occupational, educational and police records. The great majority of individuals lived exemplary lives and committed no criminal or bizarre actions prior to taking the psychiatric medications. Medication Madness reads like a medical thriller, true crime story, and courtroom drama; but it is firmly based in the latest scientific research and dozens of case studies. The lives of the children and adults in these stories, as well as the lives of their families and their victims, were thrown into turmoil and sometimes destroyed by the unanticipated effects of psychiatric drugs. In some cases our entire society was transformed by the tragic outcomes. Many categories of psychiatric drugs can cause potentially horrendous reactions. Prozac, Paxil, Zoloft, Adderall, Ritalin, Concerta, Xanax, lithium, Zyprexa and other psychiatric medications may spellbind patients into believing they are improved when too often they are becoming worse. Psychiatric drugs drive some people into psychosis, mania, depression, suicide, agitation, compulsive violence and loss of self-control without the individuals realizing that their medications have deformed their way of thinking and feeling. This book documents how the FDA, the medical establishment and the pharmaceutical industry have over-sold the value of psychiatric drugs. It serves as a cautionary tale about our reliance on potentially dangerous psychoactive chemicals to relieve our emotional problems and provides a positive approach to taking personal charge of our lives.

Starting in the mid-1800s, there was a steady drop in deaths from all infectious diseases, decreasing to relatively minor levels by the early 1900s. The history of that transformation involves famine, poverty, filth, lost cures, eugenicist doctrine, individual freedoms versus state might, protests and arrests over vaccine refusal, and much more. But the authors shows that vaccines, antibiotics, and other medical interventions are not responsible for the increase in lifespan and the decline in mortality from infectious diseases.

A trenchant look at how the coronavirus reveals the dangerous fault lines of contemporary society As seen on CNN's Fareed Zakaria GPS: "A stirring alarm addressed to an unsettled world." (Kirkus Reviews) Forget the world that came before. The author of American Vertigo serves up an incisive look at how COVID-19 reveals the dangerous fault lines of contemporary society. With medical mysteries, rising death tolls, and conspiracy theories beamed minute by minute through the vast web universe, the coronavirus

pandemic has irrevocably altered societies around the world. In this sharp essay, world-renowned philosopher Bernard-Henri Lévy interrogates the many meanings and metaphors we have assigned to the pandemic—and what they tell us about ourselves. Drawing on the philosophical tradition from Plato and Aristotle to Lacan and Foucault, Lévy asks uncomfortable questions about reality and mythology: he rejects the idea that the virus is a warning from nature, the inevitable result of global capitalism; he questions the heroic status of doctors, asking us to think critically about the loci of authority and power; he challenges the panicked polarization that dominates online discourse. Lucid, incisive, and always original, Lévy takes a bird's-eye view of the most consequential historical event of our time and proposes a way to defend human society from threats to our collective future. A portion of the author's proceeds will be donated to Binc (The Book Industry Charitable Foundation).

Nowadays a plethora of treatment technologies is available to the consumer, each employing a variety of concepts of the body, self, sickness and healing. This volume explores the options, strategies and consequences that are both relevant and necessary for patients and practitioners who are manoeuvring this medical plurality. Although wideranging in scope and covering areas as diverse as India, Ecuador, Ghana and Norway, central to all contributions is the observation that technologies of healing are founded on socially learned and to some extent fluid experiences of body and self.
