For MIS specialists and nonspecialists alike, a comprehensive, readable, understandable guide to the concepts and applications of decision support systems. Developers building apps targeting desktops, laptops, smartphones, and tablets have two options to use when building their apps: native apps built specifically for the target platform, or web apps, which run on most any system. Building native apps for any target platform is a time-consuming and expensive proposition, especially when your app targets multiple system types (desktop computers, smartphones, televisions, etc.). Web apps are challenging because a user experiences vary dramatically depending on which type of system the user accessed the app from. Desktop browsers are fully capable, but mobile device browsers have limitations due to reduce screen real estate, processor speed, network bandwidth, and more. Many of these limitations have disappeared, but there's still considerable disparity between native app and web app capabilities. Over the years, web browsers, especially those running on mobile devices like smartphones and tablets, exposed more native capabilities to web apps. This enables web apps to work more like native apps, but there were still limitations. Service Workers are a relatively new technology that make it easier for web apps to bridge the gap between native and web capabilities, removing many limitations from web apps. This is a book about Service Workers, focusing on how to use Service Workers to enhance the capabilities of a web app to create a Progressive Web App (PWA). This book focuses on the technologies enabling PWAs, and how to use them to enhance

your web apps to deliver a more native-like experience. Learning Progressive Web Apps is the first of a new generation of PWA guides that reflect breakthrough advances such as Service Workers and Web App Manifests, helping you combine the best features of web and mobile development. One step at a time, John M. Wargo introduces techniques for building apps, highlighting Building web apps a user can easily install on their local system Building web apps that work offline or on low quality networks Implementing caching strategies that give web developers control over which app resources are cached and when Delivering background processing in a web application Implementing push notifications to enable an app to more easily engage with users or trigger action from a remote server As you work through the chapters, at different points you'll start with one of three complete, stand-alone web apps, then convert them into PWAs using service workers and other browser technolo...

Millions of users create and share Excel spreadsheets every day, but few go deeply enough to learn the techniques that will make their work much easier. There are many ways to take advantage of Excel's advanced capabilities without spending hours on advanced study. Excel Hacks provides more than 130 hacks -- clever tools, tips and techniques -- that will leapfrog your work beyond the ordinary. Hacks are grouped into chapters so you can find what you need quickly, including ways to: Reduce workbook and worksheet frustration -- manage how users interact with worksheets, find and highlight information, and deal with debris and corruption. Analyze and manage data -- extend and automate these features, moving beyond the limited tasks they were designed to perform. Hack names -- learn not only how to name cells and ranges, but also how to create names that adapt to the data in your spreadsheet. Get the most out of PivotTables -- avoid the problems that make them frustrating and learn how to extend them. Create customized charts -- tweak and combine Excel's built-in charting capabilities. Hack formulas and functions -- subjects range from moving formulas around to dealing with datatype

Confronting Climate Uncertainty in Water Resources Planning and Project Design describes an approach to facing two fundamental and unavoidable issues brought about by climate change uncertainty in water resources planning and project design. The first is a risk assessment problem. The second relates to risk management. This book provides background on the risks relevant in water systems planning, the different approaches to scenario definition in water system planning, and an introduction to the decision-scaling methodology upon which the decision tree is based. The decision tree is described as a scientifically defensible, repeatable, direct and clear method for demonstrating the robustness of a project to climate change. While applicable to all water resources projects, it allocates effort to projects in a way that is consistent with their potential sensitivity to climate risk. The process was designed to be hierarchical, with different stages or phases of analysis triggered based on the findings of the previous phase. An application example is provided followed by a descriptions of some of the

In financially constrained health systems across the world, increasing emphasis is being placed on the ability to demonstrate that health care interventions are not only effective, but also cost-effective. This book deals with decision modelling techniques that can be used to estimate the value for money of various interventions including medical devices, surgical procedures, diagnostic technologies, and pharmaceuticals. Particular emphasis is placed on the importance of the appropriate representation of uncertainty in the evaluative process and the implication this uncertainty has for decision making and the need for future research. This highly practical guide takes the reader through the key principles and approaches of modelling techniques. It begins with the basics of constructing different forms of the model, the population of the model with input parameter estimates, analysis of the results, and progression to the holistic view of models as a valuable tool for informing future research exercises. Case studies and exercises are supported with online templates and solutions. This book will help analysts understand the contribution of decision-analytic modelling to the evaluation of health care programmes. ABOUT THE SERIES: Economic evaluation of health interventions is a growing specialist field, and this series of practical handbooks will tackle, in-depth, topics superficially addressed in more general health economics books. Each volume will include illustrative material, case histories and worked examples to encourage the reader to apply the methods discussed, with supporting material provided online. This series is aimed at health economists in academia, the pharmaceutical industry and the health sector, those on advanced health economics courses, and health researchers in associated fields.

This book provides an introduction to decision analytic cost-effectiveness modelling, giving the theoretical and practical knowledge required to design and implement analyses that meet the methodological standards of health technology assessment organisations. The book guides you through building a decision tree and Markov model and, importantly, shows how the results of cost-effectiveness analyses are interpreted. Given the complex nature of cost-effectiveness modelling and the often unfamiliar language that runs alongside it, we wanted to make this book as accessible as possible whilst still providing a comprehensive, in-depth, practical guide that reflects the state of the art – that includes the most recent developments in cost-effectiveness modelling. Although the nature of cost effectiveness modelling means that some parts are inevitably quite technical, across the 13 chapters we have broken down explanations of theory and methods into bite-sized pieces that you can work through at your own pace; we have provided explanations of terms and methods as we use them. Importantly, the exercises and online workbooks allow you to test your skills and understanding as you go along.
