Interpretation of Laboratory Results for Small Animal Clinicians B. M. Bush, 1992-04-08 This book provides the veterinary practitioner with an explanation of the meaning of laboratory results (biochemical, haematological and urinary) in the diagnosis of disorders in small animals. It enables veterinary surgeons in small animal practice to interpret the results of those laboratory tests that are commonly performed in order to arrive at a diagnosis or prognosis. Research has shown that this is one skill in which many veterinarians believe themselves to be deficient and would welcome guidance. This volume explains the possible meanings of the values that could be obtained. The book covers the areas of haematology, plasma/serum biochemistry and urinalysis. Advice is given on the influence of drugs, sample collection and handling, how to check the accuracy of results, how to assess the reliability of a laboratory and the additional tests that would be indicated to confirm a diagnosis together with normal reference ranges and conversion ranges

The Veterinary Laboratory and Field Manual 3rd Edition Susan C. Cork, Roy Halliwell, 2019-06-03 Isolated regions of the world are often at the forefront of emerging diseases and, to be effective in disease prevention and control, they require

basic resources for field sample collection and testing in conditions vastly different from those available in well-equipped reference laboratories. Technical support for field extension staff, and the availability of reliable diagnostic testing facilities, are also vital to ensure sustainable livelihoods for subsistence farmers. This technical handbook aims to provide an easy to follow overview of the basic laboratory techniques, and sample collection guidelines, that we consider useful for staff working in district veterinary facilities in regions that lack the infrastructural support available for staff with ready access to national veterinary laboratories. The Veterinary Laboratory and Field Manual 3rd Edition provides the reader with a summary of basic diagnostic procedures and sample submission guidelines and also advocates for improved communication between animal health extension staff, veterinarians, laboratory staff and farmers. Case studies are used to illustrate key concepts. Basic laboratory disciplines are covered including parasitology, microbiology, haematology, serology / immunology and pathology. There are also sections on laboratory infrastructure and equipment. There is additional content on common clinical presentations, One Health approaches to Antimicrobial resistance, the role of the OIE, disease surveillance and wildlife disease monitoring. Supplementary tools for use in the field and laboratory are also available online. This new edition of The Veterinary Laboratory and Field Manual is updated to include content on pen side tests, selection and integration of new technologies, engagement with international agencies and programs, and the One Health approach to disease monitoring. Animal Health extension staff in isolated regions of the world, and NGOs, can benefit from this book as well as policy makers supporting veterinary work in rural areas and veterinary para-professionals involved in One Health work. 5m Books
