Vibe is the lifestyle guide to urban music and culture including celebrities, fashion, beauty, consumer electronics, automotive, personal care/grooming, and, always, music. Edited for a multicultural audience Vibe creates trends as much as records them.

Ever since witnessing the days of Vince Lombardi and the first two Super Bowls, this eight year-old boy's life altering experience created an ardent and life long fan of the Green Bay Packers. Despite living in Connecticut, his singular dedication to the Packers has provided significant milestones, and his loyalty for this unique Wisconsin team has never wavered. Vasquez shares his enthusiasm as he attempts to persuade that the Green Bay Packers are all that they represent; a singular organization of integrity, sportsmanship and heart, in the big business world of professional football. Packer Passion offers a unique and interesting story of one fan's love for this remarkable organization, including up-close and personal experiences with players and coaches that made the Green Bay Packers the greatest football team of all time. Vince Carter continues to leave a distinct mark on the NBA landscape. A leading force in the success of the Toronto Raptors, Carter has a dazzling combination of speed and power. His spectacular moves and acrobatic dunks have won him legions of young fans and made him a fixture on highlight reels across North America. Carter was also named "Goodwill Ambassador" by the Big Brothers/Big Sisters of America organization and has founded "The Embassy of Hope" foundation to support children's charities. In this lavishly illustrated book, basketball columnist Bill Harris examines Carter's career from high school to the University of North Carolina and on to NBA superstardom. This updated edition also chronicles Carter's continued stellar performances and achievements since the original publication two years ago.

The astonishing, uplifting story of a real-life Indiana Jones and his humanitarian campaign to use education to combat terrorism in the Taliban's backyard Anyone who despairs of the individual's power to change lives has to read the story of Greg Mortenson, a homeless mountaineer who, following a 1993 climb of Pakistan's treacherous K2, was inspired by a chance encounter with impoverished mountain villagers and promised to build them a school. Over the next decade he built fifty-five schools—especially for girls—that offer a balanced education in one of the most isolated and dangerous regions on earth. As it chronicles Mortenson's quest, which has brought him into conflict with both enraged Islamists and uncomprehending Americans, Three Cups of Tea combines adventure with a celebration of the humanitarian spirit.

This work covers 115 years of basketball, detailing how and why the NBA was able to overcome so many of the obstacles that crushed its predecessors to

become the most successfully marketed league in all of professional sports. Topics covered are the game's inventor, James Naismith; the Buffalo Germans in the early 1900's; the barnstorming Harlem "Rens" and the Original Celtics with Joe Lapchick in the Roaring 20's; how basketball became an Olympic sport in 1936 in Berlin; players of the early NBA as well as the recent; and the struggles of the early NBL, BAA, ABL, and the ABA.

Baker and McAdoo, in league with Wilson, offer Craig the opportunity to deliver a fresh and insightful study of the period, its major issues, and some of its leading figures.

How is academia portrayed in children's literature? This Element ambitiously surveys fictional professors in texts marketed towards children, who are overwhelmingly white and male, tending to be elderly scientists. Professors fall into three stereotypes: the vehicle to explain scientific facts, the baffled genius, and the evil madman. By the late twentieth century, the stereotype of the male, mad, muddlehead, called Professor SomethingDumb, is formed in humorous yet pejorative fashion. This Element provides a publishing history of the role of academics in children's literature, questioning the book culture which promotes the enforcement of stereotypes regarding intellectual expertise in children's media. This title is also available, with additional material, as Open Access.

When a child is murdered, everyone gets a life sentence. When ten-year-old Josh Banks's body is discovered dumped on waste ground, Detective Sergeant Bev Morriss wants justice. She's not alone. Everyone hates child killers - even hardened criminals. Tip-offs trickle in, and the new press liaison officer has his work cut out when the squad springs a leak. Trial by redtop is the least of the cops' worries... 7th in Maureen Carter's Birmingham-based 'Bev Morriss' police series.

At 1:59 a.m. in Spokane, Washington—eight days before the 1980 presidential election—Vince Camden pockets his stash of stolen credit cards and drops by an all-night poker game before heading to his witness-protection job dusting crullers at Donut Make You Hungry. Along with a neurotic hooker girlfriend, this is the total sum of Vince's new life. But when a familiar face shows up in town, Vince realizes his sordid past is still too close behind him. During the next unforgettable week, he'll negotiate a coast-to-coast maze of obsessive cops, eager politicians, and assorted mobsters—only to find that redemption might exist, of all places, in the voting booth.

New York magazine was born in 1968 after a run as an insert of the New York Herald Tribune and quickly made a place for itself as the trusted resource for readers across the country. This book offers an informed and revealing account of NASA's involvement in the scientific understanding of the Earth's atmosphere. Since the nineteenth century, scientists have attempted to understand the complex processes of the Earth's atmosphere and the weather created within it. This effort has evolved with the development of new technologies -- from the first instrument-equipped weather balloons to multibillion-dollar meteorological satellite and planetary science programs. Erik M. Conway chronicles the history of atmospheric science at NASA, tracing the story from its beginnings in 1958, the International Geophysical Year, through to the present, focusing on NASA's programs and research in meteorology, stratospheric ozone depletion, and planetary climates and global warming. But the story is not only a scientific one. NASA's researchers operated within an often politically contentious environment. Although environmental issues garnered strong public and political support in the 1970s, the following decades saw increased opposition to environmentalism as a threat to free market capitalism. Atmospheric Science at NASA critically examines this politically controversial science, dissecting the often convoluted roles, motives, and relationships of the various institutional actors involved -- among them NASA, congressional appropriation committees, government weather and climate

bureaus, and the military. -- Kristine C. Harper

This new work defines national security strategy, its objectives, the problems it confronts, and the influences that constrain and facilitate its development and implementation in a post-Cold War, post-9/11 environment. The authors note that making and implementing national strategy centers on risk management and present a model for assessing strategic risks and the process for allocating limited resources to reduce them. The major threats facing the United States now come from its unique status as "the sole remaining superpower" against which no nation-state or other entity can hope to compete through conventional means. The alternative is what is now called asymmetrical or fourth generation warfare. Drew and Snow discuss all these factors in detail and bring them together by examining the continuing problems of making strategy in a changed and changing world. Originally published in 2006.

She was a poor Southern tobacco farmer who worked the same land as her slave ancestors, yet her cells—taken without her knowledge—became one of the most important tools in medicine: The first “immortal” human cells grown in culture, which are still alive today, though she has been dead for more than sixty years. HeLa cells were vital for developing the polio vaccine; uncovered secrets of cancer, viruses, and the atom bomb’s effects; helped lead to important advances like in vitro fertilization, cloning, and gene mapping; and have been bought and sold by the billions. Yet Henrietta Lacks remains virtually unknown, buried in an unmarked grave. Henrietta’s family did not learn of her “immortality” until more than twenty years after her death, when scientists investigating HeLa began using her husband and children in research without informed consent. And though the cells had launched a multimillion-dollar industry that sells human biological materials, her family never saw any of the profits. As Rebecca Skloot so brilliantly shows, the story of the Lacks family—past and present—is inextricably connected to the dark history of experimentation on African Americans, the birth of bioethics, and the legal battles over whether we control the stuff we are made of. Over the decade it took to uncover this story, Rebecca became enmeshed in the lives of the Lacks family—especially Henrietta’s daughter Deborah. Deborah was consumed with questions: Had scientists cloned her mother? Had they killed her to harvest her cells? And if her mother was so important to medicine, why couldn’t her children afford health insurance? Intimate in feeling, astonishing in scope, and impossible to put down, *The Immortal Life of Henrietta Lacks* captures the beauty and drama of scientific discovery, as well as its human consequences.
