Emergencies and disaster situations are harsh testing grounds for the logistical and organisational capacity of affected countries, and this is especially true in the health sector. The acquisition, storage, mobilisation and distribution of drugs and pharmaceutical supplies to the victims of a disaster require efficient handling and use of resources. This publication provides guidelines for authorities and organisations for the management of planning for disasters, and underlines the fact that each step in the supply chain should be seen as a critical and interrelated link. The techniques and procedures proposed are multi-sectoral in nature and can be used in any type of emergency operation.

Sixteenth in a series of annual reports comparing business regulation in 190 economies, Doing Business 2019 measures aspects of regulation affecting areas of everyday business activity.

Although data warehousing is essential, the real payoff is in mining this text to provide timely and accurate information to decision makers. The goals of text mining are similar to those of data mining, but the techniques differ. This book explains these text mining techniques.

Eleventh in a series of annual reports comparing business regulations in 189 economies, Doing Business 2014 measures regulations affecting 11 areas of everyday business activity around the world.

There is growing consensus in the literature that trade and trade policy matter for a pro-poor growth and development strategy. Therefore, policies that are consistent with this strategy feature increasingly in many African countries where poverty is endemic and rapid and where sustainable economic growth is viewed as the major vehicle for poverty reduction. Key elements of these policies include measures that promote the expansion and diversification of production and trade in Africa. This book is aimed at articulating appropriate structural and policy measures for eliminating the constraints that African countries face and thus ensuring that they can derive maximum benefits from all available market access opportunities. There is evidence that most African countries face external market access barriers in their major export destinations which are generally less constraining than those confronting countries in other developing country regions. Yet, they have generally not been able to take full advantage of the special (preferential) market access opportunities available to them. This suggests that improved external market access, whether reciprocal or preferential, would not, by itself, be sufficient for strengthening African export performance. In this collection, export supply response capacity takes external (beyond-the-border) factors as given and concentrates primarily on the internal (behind-the-border) factors that influence production and distribution costs and, thus, competitiveness. The central working hypothesis of this book is that the inability of domestic producers and exporters in Africa to respond quickly, effectively and efficiently to external market access opportunities is caused by various limitations of their internal supply capacity and that this, in turn, is largely responsible for the lacklustre export performance of many African countries. This comprehensive study should be of interest to students and researchers of international trade and development economics as well as African studies.

This edition of Importing Into the United States contains material pursuant to the Trade Act of 2002 and the Customs

Modernization Act, commonly referred to as the Mod Act. Importing Into the United States provides wide-ranging information about the importing process and import requirements. We have made every effort to include essential requirements, but it is not possible for a book this size to cover all import laws and regulations. Also, this publication does not supersede or modify any provision of those laws and regulations. Legislative and administrative changes are always under consideration and can occur at any time. Quota limitations on commodities are also subject to change. Therefore, reliance solely on the information in this book may not meet the "reasonable care" standard required of importers.

The numeric values retrieved from a data warehouse may be difficult for business users to interpret, and may even be interpreted incorrectly. Therefore, in order to better understand numeric values, business users may require an interpretation in meaningful, non-numeric terms. However, if the transition between non-numeric terms is crisp, true values cannot be measured and a smooth transition between classes may no longer be possible. This book addresses this problem by presenting a fuzzy classification-based approach for a data warehouses. Moreover, it introduces a modeling approach for fuzzy data warehouses that makes it possible to integrate fuzzy linguistic variables in a meta-table structure. The essence of this structure is that fuzzy concepts can be integrated into the dimensions and facts of an existing classical data warehouse without affecting its core. This allows a simultaneous analysis, both fuzzy and crisp. A case study of a movie rental company underlines and exemplifies the proposed approach.
