

# Water Supply And Sanitary Engineering By G S Birdie Free

This book is designed to meet the needs of diploma students. The language is simple and lucid. The material is practice oriented, with the inclusion of Indian Standards. SI units are adopted wherever possible. Topics on air pollution and industrial waste treatment are covered. At each chapter end there are objective, short answer and essay questions.

## Water Supply And Sanitary Engineering

This book deals with water supply, desalination of sea water and sanitary engineering, including sewerage, oxidation ponds, oxidation ditches, industrial waste disposal, sludge disposal, disposal of refuse, village sanitation and planning of water supply and sanitary engineering projects.

The supply of healthy drinking water and disposal of our wastewater is a central problem. Solving this problem is one of the claims of the UN Millennium Development Goals, and consequently an obligation for all those involved with water to join efforts in finding solutions. Climate change, population growth, migration and urban sprawl are factors forcing us to reconsider the traditional approach to urban water management. The water supply and sanitation infrastructure currently in use worldwide was developed in and for countries which are relatively wealthy, and which have access to plenty of water. Is it really wise to build the same kind of infrastructure and to apply the

same methods and processes in regions with different climatic, ecological and economical conditions? Should we maintain our flush and discharge sanitation concepts while freshwater is becoming a limited resource? Aren't there smarter more environmentally sound methods to use and safeguard our precious water resources? Are water authorities, city planners, architects, regulators and politicians ready to accept innovative solutions deviating from those described in textbooks? Questions like these were raised during the International Symposium Water Supply and Sanitation for All held in Berching, Germany from September 27 - 28, 2007. This book collects the papers presented at this conference.

PART- 1 : Water Supply Engineering Introduction \* Quantity of Water \* Sources of Water \* Pumps Intakes and Conveyance of Water \* Quality of Water \* Laying and Water maintenance of Pipe lines \* Pipe Appurtenances \* Distribution of Water \* Storage and Distribution Reservoirs and Waste \* Water Survey \* Water Treatment Processes \* Plain Sedimentation -Coagulation \* Filtration \* Disinfection \* Miscellaneous Processes of Treatment \* Water Supplies and Radio Activity \* Special Problems of Rural Water Supply \* Water Pollution Control \* Financing and Management of Water Supply Schemes. PART- II : Sanitary Engineering Introduction and Definition \* Collection and Conveyance of Sewage \* Quality of Sanitary Sewage and Storm Water H Construction of Sewage H Design of Sewers H Sewer Appurtenances H Maintenance of Sewers H Sewage Pumping \* Planning of Sewage System \* Characteristics and Composition of

Sewage \* Sewage Disposal \* Sewage Treatment \* Preliminary Treatment of Sewage \* Sedimentation \* Chemical Precipitation \* Trickling Filters \* Activated Sludge Processes \* Sewage Sludge Treatment and Disposal \* Chlorination \* Stabilization Ponds \* Industrial Wasts Tank and Imhoff Tank \* Sanitary Fittings \* House Drainage \* Rural Miscellaneous Topics.

This is a reproduction of a book published before 1923. This book may have occasional imperfections such as missing or blurred pages, poor pictures, errant marks, etc. that were either part of the original artifact, or were introduced by the scanning process. We believe this work is culturally important, and despite the imperfections, have elected to bring it back into print as part of our continuing commitment to the preservation of printed works worldwide. We appreciate your understanding of the imperfections in the preservation process, and hope you enjoy this valuable book.

Unlike some other reproductions of classic texts (1) We have not used OCR(Optical Character Recognition), as this leads to bad quality books with introduced typos. (2) In books where there are images such as portraits, maps, sketches etc We have endeavoured to keep the quality of these images, so they represent accurately the original artefact. Although occasionally there may be certain imperfections with these old texts, we feel they deserve to be made available for future generations to enjoy.

This text series of Water and Wastewater Engineering have been written in a time of mounting urbanisation and industrialisation and resulting stress on water and wastewater systems. Clean and ample sources of water for municipal uses are becoming harder to find and more

expensive to develop. The text is comprehensive and covers all aspects of water supply, water sources, water distribution, sanitary sewerage and urban stormwater drainage. This wide coverage is helpful to engineers in their every day practice.

The book in its present form introduces detailed descriptions and illustrative solved problems in the fields of Water Supply, Sanitary and Environmental Engineering. The entire subject matter has been split up in three parts: Part I Water Supply Engineering Part II Sanitary Engineering Part III Environmental Engineering. The first part deals with Water Supply Engineering which is related to demand of water for various purposes in human life, sources of water supply, quantity and quality of water, treatment and distribution of water, etc. The second part deals with Sanitary Engineering which is related to quality and quantity of sewage, construction and design of sewers, methods of treatment of sewage, etc. The third part discusses various aspects of Environmental Engineering including air pollution, noise pollution, etc. A typical design of a domestic sewage treatment plant is given in the Appendix as an additional attraction. The book now contains: \* 253 \* 140 \* 60 \* 610 Self-explanatory and neat diagrams Illustrative problems Useful tables Questions at the end of chapters. It is hoped that the book in its present form will be extremely useful to the Engineering students preparing for the Degree Examinations in Civil Engineering of all the Indian Universities, Diploma Examinations conducted by various Boards of Technical Education, Certificate Courses as well as for A.M.I.E., U.P.S.C., other similar Competitive and Professional Examinations.
