Explore the game-changing technology that allows mobile learning to effectively reach K-12 students. *Mobile Learning: A Handbook for Developers, Educators and Learners* provides research-based foundations for developing, evaluating, and integrating effective mobile learning pedagogy. Twenty-first century students require twenty-first century technology, and mobile devices provide new and effective ways to educate children. But with new technologies come new challenges—therefore, this handbook presents a comprehensive look at mobile learning by synthesizing relevant theories and drawing practical conclusions for developers, educators, and students. Mobile devices—in ways that the laptop, the personal computer, and netbook computers have not—present the opportunity to make learning more engaging, interactive, and available in both traditional classroom settings and informal learning environments. From theory to practice, *Mobile Learning* explores how mobile devices are different than their technological predecessors, makes the case for developers, teachers, and parents to invest in the technology, and illustrates the many ways in which it is innovative, exciting, and effective in educating K-12 students. Explores how mobile devices can support the needs of students. Provides examples, screenshots, graphics, and visualizations to enhance the material presented in the book. Provides developers with the background necessary to create the apps their audience requires. Presents the case for mobile learning in and out of classrooms as early as preschool. Discusses how mobile learning enables better educational opportunities for the visually impaired, students with Autism, and adult learners. If you're a school administrator, teacher, app developer, or parent, this topical book provides a theoretical, well-researched discussion of the pedagogical theory and mobile learning, as well as practical advice in setting up a mobile learning strategy.

Long Life Learning offers readers a fascinating glimpse into a future where the average working life has no beginning, middle, or end. Contemplating a shift from the educational all-you-can-eat buffet of college and university to an "as-you-need-it" approach to delivering

education, author Michelle Weise explains why and how worker education is overdue for momentous changes. Written in two parts, *Long Life Learning* begins by imagining a world where increased lifespans have contributed to creating working lives that span over 100 years. The book asks the question that naturally arises as a result: Will a four-year education taken at the beginning of a 100-year career adequately prepare a worker for their entire working life? After providing readers a thorough explanation of why our current education system is poorly equipped to educate workers for such a long journey, Weise outlines the solutions to the shortcomings of the existing framework. From wraparound supports for workers to targeted education, integrated earning and learning, and transparent and fair hiring, *Long Life Learning* describes exactly how the existing education system must adapt in order to meet the needs of a new generation of workers. The book makes a compelling case for the coming need for ongoing, periodic education, as well as training that is seamlessly integrated into our future jobs. Perfect for workers, young and old, and the educators and employers preparing talent as the ground shifts underneath their feet, *Long Life Learning* belongs on the bookshelves of anyone with an interest in the future of work, education, and the labor market.

It is now conventional wisdom to see the great policy challenges of the 21st century as inherently transnational. It is equally common to note the failures of the international institutions the world relies on to address such challenges. As the acclaimed 2013 book Gridlock argued, the world increasingly needs effective international cooperation, but multilateralism appears unable to deliver it in the face of deepening interdependence, rising multipolarity, and the growing complexity and fragmentation that characterise the global order. The Gridlock authors have now partnered with a group of leading experts to offer a trenchant reassessment of elements of the argument. Comparing anomalies and exceptions to multilateral dysfunction across a number of spheres of world politics, Beyond Gridlock explores seven pathways through and beyond gridlock. While multilateralism continues to fall short, Beyond Gridlock identifies systematic means to avoid or resist these forces and turn them into collective solutions. This book offers a vital new perspective on world politics as well as a practical guide for positive change in global policy.

Teaching Students About the World of Work argues that educational institutions—especially two-year and four-year public institutions serving low-income students—need to make the topic of employment a central element in their educational offerings. Indeed, the book demonstrates that a far greater emphasis on teaching students about the work world will be necessary if colleges are to give disadvantaged students a realistic chance for professional and economic success. The recommendation is a reconfiguration of postsecondary education that represents a paradigm shift in career preparation and learning. Editors Nancy Hoffman and Michael Lawrence Collins and their authors provide a rich and comprehensive view of both today's work world and the challenges facing many young people who are determined to find a place within it. The book offers detailed accounts of how several community colleges have put employment at the center of the curriculum; provides practical insights into the twenty-first century labor market and ways to improve the choices and outcomes for low-income job seekers; and explores the daunting structural barriers to securing successful and satisfying employment. Throughout all its chapters, the book highlights increasing inequalities—in both opportunities and outcomes—within our society. In order to redress those disparities, it argues, postsecondary educators will need to offer enhanced insights and sophistication to disadvantaged young people preparing to enter and navigate the work world. An urgent but unflinchingly reasonable book for our times, Teaching Students About the World of Work will be required reading for educators determined to create practical opportunities for young people in search of good employment and better lives.

Introducing Finance defines basic terms and concepts, describes the key features and characteristics of strategies and tools that practitioners use in their field, and provides students with a strong background with which to apply their newly acquired knowledge. This book provides a comprehensive overview of nucleophilic aromatic substitutions, focusing on the mechanistic and synthetic features that govern these reactions. The first chapter presents a detailed mechanistic analysis of the factors determining the feasibility of S_NAr substitutions, providing decisive information to predict regioselectivity of many reactions and to define the conditions for concerted S_NAr processes. Reflecting the key role played by these species as intermediates in most S_NAr reactions, chapter 2 then discusses the chemistry of anionic sigma-complexes. Chapter 3 describes the concept of superelectrophilicity in S_NAr substitutions, as it has recently emerged from the reactivity of strongly electron-deficient aromatic and heteroaromatic structures. The numerous synthetic applications are considered in depth in the chapters 4 and 5 that follow on intermolecular and intramolecular nucleophilic aromatic

substitutions. Then, chapter 6 focuses on substitutions proceeding formally through displacement of a hydride ion, a hot topic in the field. The final chapter brings together concise yet comprehensive discussions surrounding SNAr photosubstitutions, radical substitutions, and ANRORC substitutions. Authored by a highly respected chemist who has contributed greatly to the field over the past two decades, this is a valuable information source for all organic chemists working in academia or the pharmaceutical and agrochemical industries.

Reinvent public schools with proven, innovative practices Our homes, communities, and the world itself need the natural assets our children bring with them as learners, and which they often lose over time on the assembly line that pervades most of the public education system today. We see no actions as more important in school than developing, supporting, and reinforcing children's sense of agency, the value of their voices, and their potential to influence their own communities. In *Timeless Learning*, an award-winning team of leaders, Chief Technology Officer Ira Socol, Superintendent Pam Moran, and Lab Schools Principal Chad Ratliff demonstrate how you can implement innovative practices that have shown remarkable success. The authors use progressive design principles to inform pathways to disrupt traditions of education today and show you how to make innovations real that will have a timeless and meaningful impact on students, keeping alive the natural curiosity and passion for learning with which children enter school. Discover the power of project-based and student-designed learning Find out what "maker learning" entails Launch connected and interactive digital learning Benefit from the authors' "opening up learning" space and time Using examples from their own successful district as well as others around the country, the authors create a deep map of the processes necessary to move from schools in which content-driven, adult-determined teaching has been the traditional norm to new learning spaces and communities in which context-driven, child-determined learning is the progressive norm.
