A simple pill, it had been discovered, could wipe out the memory of any traumatic event. At almost the same moment in humanity's broad history, mankind had discovered the means for bringing about its utter downfall. And the ability to forget it ever happened. NEW YORK TIMES BESTSELLER • The end of the world was only the beginning. In his internationally bestselling and critically acclaimed novel The Passage, Justin Cronin constructed an unforgettable world transformed by a government experiment gone horribly wrong. Now the scope widens and the intensity deepens as the epic story surges forward . . . In the present day, as the man-made apocalypse unfolds, three strangers navigate the chaos. Lila, a doctor and an expectant mother, is so shattered by the spread of violence and infection that she continues to plan for her child's arrival even as society dissolves around her. Kittridge, known to the world as "Last Stand in Denver," has been forced to flee his stronghold and is now on the road, dodging the infected, armed but alone and well aware that a tank of gas will get him only so far. April is a teenager fighting to guide her little brother safely through a landscape of death and ruin. These three will learn that they have not been fully abandoned—and that in connection lies hope, even on the darkest of nights. One hundred years in the future, Amy and the others fight on for humankind's salvation . . . unaware that

the rules have changed. The enemy has evolved, and a dark new order has arisen with a vision of the future infinitely more horrifying than man's extinction. If the Twelve are to fall, one of those united to vanquish them will have to pay the ultimate price. A heart-stopping thriller rendered with masterful literary skill, *The Twelve* is a grand and gripping tale of sacrifice and survival. Growing up an orphan in the Milky Way hasn't been easy, especially as a teenage girl in the Naval Academy. Unfortunately for Molly Fyde, things are about to get worse. Mediterranean islands exhibit many similarities in their biotic ecological, physical and environmental characteristics. There are also many differences in terms of their human colonization and current anthropogenic pressures. This book addresses in three sections these characteristics and examines the major environmental changes that the islands experienced during the Quaternary period. The first section provides details on natural and cultural factors which have shaped island landscapes. It describes the environmental and cultural changes of the Holocene and their effects on biota, as well as on the current human pressures that are now threats to the sustainability of the island communities. The second section focuses on the landscapes of the largest islands namely Sicily, Sardinia, Corsica, Cyprus, Crete, Malta and the Balearics. Each island chapter includes a special topic reflecting a particular characteristic of the island. Part three presents strategies for action towards sustainability in Mediterranean islands and concludes with a comparison between the largest islands. Despite several published books on Mediterranean ecosystems/landscapes there is no existing book dealing with Mediterranean islands in a collective manner. Students, researchers and university lecturers in environmental science, geography, biology and ecology will find this work invaluable as a cross-disciplinary text while planners and politicians will welcome the succinct summaries as background material to planning decisions.

John Perry did two things on his 75th birthday. First he visited his wife's grave. Then he joined the army. The good news is that humanity finally made it into interstellar space. The bad news is that planets fit to live on are scarce-and aliens willing to fight for them are common. The universe, it turns out, is a hostile place. So: we fight. To defend Earth (a target for our new enemies, should we let them get close enough) and to stake our own claim to planetary real estate. Far from Earth, the war has gone on for decades: brutal, bloody, unyielding. Earth itself

is a backwater. The bulk of humanity's resources are in the hands of the Colonial Defense Force, which shields the home planet from too much knowledge of the situation. What's known to everybody is that when you reach retirement age, you can join the CDF. They don't want young people; they want people who carry the knowledge and skills of decades of living. You'll be taken off Earth and never allowed to return. You'll serve your time at the front. And if you survive, you'll be given a generous homestead stake of your own, on one of our hard-won colony planets. John Perry is taking that deal. He has only the vaguest idea what to expect. Because the actual fight, light-years from home, is far, far harder than he can imagine-and what he will become is far stranger. Until a ship is in distress. In the twenty-third century, this job has moved into outer space. A network of beacons allows ships to travel across the Milky Way at many times the speed of light. These beacons are built to be robust. They never break down. They never fail. At least, they aren't supposed to.
