This popular book incorporates modern approaches to physics. It not only tells readers how physics works, it shows them. Applications have been enhanced to form a bridge between concepts and reasoning.

This epoch-making and monumental work on Vedic Mathematics unfolds a new method of approach. It relates to the truth of numbers and magnitudes equally applicable to all sciences and arts. The book brings to light how great and true knowledge is born of intuition, quite different from modern Western method. The ancient Indian method and its secret techniques are examined and shown to be capable of solving various problems of mathematics. The universe we live in has a basic mathematical structure obeying the rules of mathematical measures and relations. All the subjects in mathematics-Multiplication, Division, Factorization, Equations, Calculus, Analytical Conics, etc.-are dealt with in forty chapters, vividly working out all problems, in the easiest ever method discovered so far. The volume, more a 'magic', is the result of intuitional visualization of fundamental mathematical truths born after eight years of highly concentrated endeavour of Jagadguru Sri Bharati Krsna Tirtha.

The basis of this book is a manuscript in Sanskrit which he obtained from India and its value lies in the depth and detail with which this new material has been studied and presented. The author is to be congratulated, not for his skilful translation from Sanskrit but also for the clarity with which he has applied this to western needs and western minds. Much has been written in the past regarding the psychosomatic effects of Pranayama and Asanas but in his text, Dr Saher explains clearly the mechanism by which brain and mind operate in conjunction with bodily functions, emotions and psychic experience and also how these may be controlled and applied for our betterment. He also shows how specific areas of the brain control similar areas of mind, how these can be applied to Selfanalysis and using exercises also given in the text, so control both mind and body, that Self-Realisation is possible in the highest sense and that even before this stage is reached, Health, Harmony and Serenity will be attained, surely to be prized for themselves alone. This fascinating and profound book of ancient, Eastern esoteric wisdom backed by the latest discoveries and experiments of modern science treats the health of the soul by showing the relationship between soul and brain. Here is a practical guide to Zen-Yoga which can help to master suffering and harness latent powers. At a time when science is exploring outer space, Zen-Yoga helps us to explore the inner space of the human psyche, to recognize within ourselves new freedom – freedom to work out our destiny with integral consciousness or the divine supra – Self as the light within. This book is a cybernetic exploration of the mind's inner space leading to expanded cosmo-electronic consciousness. Having shown the differences between Eastern and Western thought – processes, Saher explains how the sages of the East have acquired that source of wisdom and bliss which our misguided youth seeks vainly in hallucinogenic drugs.

This book explores the responses of the Roman Catholic Church to the French Revolution beginning in 1789, to the liberal revolution in 1830, and particularly the democratic revolution of 1848 in France, and asks how these events were perceived and explained. Informed by the collective memory of the first revolution, how did the Church react to renewed 'catastrophe'? How did it seek to influence political choice? Why did authoritarian government prove to be so attractive? This is a study of the impact of religion on political behaviour, as well as of the politicisation of religion. Roger Price employs the methodology of the social and cultural historian to explain the development and interaction of two key institutions, Church and State, during a period of political and social upheaval. Drawing on a wide range of archival and printed primary sources, as well as secondary literature, this book analyses the diverse perceptions of people with power and the impact of their decisions, and the responses, of a wide range of individuals and communities.

Her story reflects the experiences common to many Indian communities in Latin America today. Rigoberta suffered gross injustice and hardship in her early life: her brother, father and mother were murdered by the Guatemalan military. She learned Spanish and turned to catechist work as an expression of political revolt as well as religious commitment. The anthropologist Elisabeth Burgos-Debray, herself a Latin American woman, conducted a series of interviews with Rigoberta Menchu. The result is a book unique in contemporary literature which records the detail of everyday Indian life. Rigoberta's gift for striking expression vividly conveys both the religious and superstitious beliefs of her community and her personal response to feminist and socialist ideas. Above all, these pages are illuminated by the enduring courage and passionate sense of justice of an extraordinary woman.

Written by leading scholars in their respective fields, The Heritage of World Civilizations offers compelling and thorough coverage of the unique heritage of Asian, African, Middle Eastern, European, and American civilizations, while highlighting the role of the world's great religious and philosophical traditions.

Robeson's international achievements as a singer and actor in starring roles on stage and screen made him the most celebrated black American of his day, but his outspoken criticism of racism in the United States, his strong support of African independence, and his fascination with the Soviet Union placed him under the debilitating scrutiny of McCarthyism. Blacklisted, his famed voice silenced, Here I Stand offered a bold answer to his accusers. It remains today a defiant challenge to the prevailing fear and racism that continues to characterize American society.

When considering the question of what makes us human, the ancient Greeks provided numerous suggestions. This book argues that the defining criterion in the Hellenic world, however, was the most obvious one: speech. It explores how it was the capacity for authoritative speech which was held to separate humans from other animals, gods from humans, men from women, Greeks from non-Greeks, citizens from slaves, and the mundane from the heroic. John Heath illustrates how Homer's epics trace the development of immature young men into adults managing speech in entirely human ways and how in Aeschylus' Oresteia only human speech can disentangle man, beast, and god. Plato's Dialogues are shown to reveal the consequences of Socratically imposed silence. With its examination of the Greek

focus on speech, animalization, and status, this book offers new readings of key texts and provides significant insights into the Greek approach to understanding our world.

This book explores the various historical and cultural aspects of scientific, medical and technical exchanges that occurred between central Europe and Asia. A number of papers investigate the printing, gunpowder, guncasting, shipbuilding, metallurgical and drilling technologies while others deal with mapping techniques, the adoption of written calculation and mechanical clocks as well as the use of medical techniques such as pulse taking and electrotherapy. While human mobility played a significant role in the exchange of knowledge, translating European books into local languages helped the introduction of new knowledge in mathematical, physical and natural sciences from central Europe to its periphery and to the Middle East and Asian cultures. The book argues that the process of transmission of knowledge whether theoretical or practical was not a simple and one-way process from the donor to the receiver as it is often admitted, but a multi-dimensional and complex cultural process of selection and transformation where ancient scientific and local traditions and elements. The book explores the issue from a different geopolitical perspective, namely not focusing on a singular recipient and several points of distribution, namely the metropolitan centres of science, medicine, and technology, but on regions that are both recipients and distributors and provides new perspectives based on newly investigated material for historical studies on the cross scientific exchanges between different parts of the world.
