The authors argue for the wise integration of web tools into what the liberal arts does best: writing across the curriculum. All academic disciplines value clear and compelling prose, whether that prose comes in the shape of a persuasive essay, scientific report, or creative expression. The act of writing visually demonstrates how we think in original and critical ways and in ways that are deeper than those that can be taught or assessed by a computer. Furthermore, learning to write well requires engaged readers who encourage and challenge us to revise our muddled first drafts and craft more distinctive and informed points of view. Indeed, a new generation of web-based tools for authoring, annotating, editing, and publishing can dramatically enrich the writing process, but doing so requires liberal arts educators to rethink why and how we teach this skill, and to question those who blindly call for embracing or rejecting technology.

to follow. Making a website as a beginner has never been easier! Why should you build your own website on your own domain instead of using a free service? The answer is that, with your own privately registered domain and hosting account, YOU own and control the website, not anybody else. You can put whatever you like on your site and no-one can tell you otherwise. You can make your site look and behave how you like. You're the boss. And, with your own website, you can build your own distinctive 'brand', whether you are a business or a community group, an individual, or whatever... Your domain becomes your own exclusive web address, your own piece of online virtual 'real estate' that plays its part in publicizing your mission or message. Creating a website on your own domain gives you identity, visibility and, indeed, status. But don't you need a professional web designer to make a good job building a website? No, definitely not! This was the case in the early days of the Internet because only a few tech-savvy geeks knew and understood the computer language (HTML) required. But as the technology has advanced, so have the tools to build websites become more accessible. WordPress is one of these tools and WordPress is the subject of this e-book. But how much does it cost to make a website? The answer is just a few bucks per month for hosting. If you create your own website using WordPress, you don't have to spend another cent. And what if you're looking to start a blog? Well, the same instructions apply. WordPress was originally designed as a blogging platform and this ebook shows you just how to build a blog using the same techniques as designing a website.
