Engineering Construction Specifications J. Goldbloom,2012-12-06 For the past 25 years, Joe Goldbloom and I have

conducted a running debate over whether specifications writers engage in the unlawful practice of law. Joe's position is that lawyers have no business writing specifications, that being the designer's province. Having been given the honor to write this foreword, I have the opportunity for the last word, at least for now. Joe Goldbloom and I first met in 1964, while serving together on the ASCE Committee on Contract Administration. Joe became my teacher, mentor, and friend. Underlying our good natured debate was the serious issue of the technical qualifications required of a specifications writer. As a matter of fact, specifications writing traditionally has fallen in a crack between the two professions. Specifications writing typically is neither taught in engineering school nor in law school. Engineers are taught how to design; lawyers are taught how to draft contracts. Specifications writing requires mastery of the technical elements of design as well as the skills of contract drafting. Specifications writing is neither glamorous nor sexy; it is often viewed as a necessary evil of the designer's job.

A Guide to Writing Successful Engineering Specifications David C. Purdy, 1991-01 The focus of this practical, hands-on book is on the preparation of the specification in the engineering industry - representing, along with the drawings, the final product of any engineering organization, and crucial to its success. Each chapter is supplemented by a checklist which can be used first to plan an effort, and later used to ensure that the effort is truly complete. Each chapter also contains practical guidance on all aspects of writing the engineering specification, and specification techniques common to all industries are presented.

Describes necessary office equipment--emphasizing computers and word processors.

A Guide to Writing as an Engineer David F. Beer, David A. McMurrey, 2019-04-09 Everyone knows that engineers must be good at math, but many students fail to realize just how much writing engineering involves: reports, memos, presentations, specifications—all fall within the purview of a practicing engineer, and all require a polished clarity that does not happen by accident. *A Guide to Writing as an Engineer* provides essential guidance toward this critical skill, with practical examples, expert discussion, and real-world models that illustrate the techniques engineers use every day. Now in its Fifth Edition, this invaluable guide has been updated to reflect the most current standards of the field, and leverage the eText format to provide interactive examples, Engineering Communication Challenges, self-quizzes, and other learning tools. Students build a more versatile skill set by applying core communication techniques to a variety of situations professional engineers encounter, equipping them with the knowledge and perspective they need to succeed in any workplace. Although suitable for first-year undergraduate students, this book offers insight and reference for every stage of a young engineer's

career.

Construction Specification Writing Harold J. Rosen, Tom Heineman, 1990-02 This third edition of the standard construction specifications writing guide has been updated to include new information on linking specifications to computer databases and to other parts of the design process. Construction Specifications Writing shows how to organize documents, consolidate the Federal government systems, generate well-researched mastertexts, automate specifications, write more condensed text, use full-time specifications consultants, and use the new knowledge-based specifying systems.

A Manual of Engineering Specifications and Contracts Lewis M. Haupt, 2017-10-12 Excerpt from A Manual of Engineering Specifications and Contracts: Designed as a d104-Book and Work of Reference for All Who May, Be Engaged in the Theory or Practice of Engineering In preparing a piece of work for letting, the duties of the Engineer are manifold. He must first Of all have a clear conception of the thing to be done, and must give graphical expression to this idea, both by drawings and writing. It then becomes necessary to inform himself as to the probable cost of the proposed work, and if within reasonable limits, and he desire to let it, he must next notify contractors, and others, by such public announce ments as will reach the largest number of reliable parties. It is thus seen that the preparation of the drawings, esti mates, specifications and advertisements are all duties of the Engineer, which he has heretofore been allowed to learn as necessity required, and Often on the spur of the moment. But his duties do not end here to insure the rapid and faithful execution of the work, he generally

prepares the form of bid, with certain instructions to bidders, giving restrictions with which they must comply to render their bids valid, and finally, to adopt a form of agreement which shall be approved by both parties to the contract. The duties of the contractor are simply to examine 'drawings and specifications, or the site of the work.
