This text examines relevant mental health state legislation relating to criminal, civil and family courts and then sets out a logical structure for writing reports for such matters. The use of psychological tests and their utility in providing useful objective data for courts is also examined. Three chapters are devoted to questions central to an expert offering an 'opinion' in court. Writing clear, impactful reports is a crucial skill for science students, but few books focus on this area for the undergraduate. Particularly useful for biology students, this text adopts a hands-on approach, using example reports and published papers as models to put guidance into practice. An introductory chapter familiarizes undergraduates with the principles of writing science. Two model reports are then developed, walking students through experimental and observational teaching-lab reports. The structure and content of the Introduction, Methods and Materials, Results, and Discussion are explained, together with tips for the title, abstract, and references. Students are then guided on how to polish their first draft. The last section of the book analyzes two published papers, helping the reader transition to reporting original research. Clearly and concisely written, this text offers a much-needed lifeline for science students facing science report-writing for the first time, and for those looking to hone their writing skills.

This book teaches the concepts and tools behind reporting modern data analyses in a reproducible manner. Reproducibility is the idea that data analyses should be published or made available with their data and software code so that others may verify the findings and build upon them. The need for reproducible report writing is increasing dramatically as data analyses become more complex, involving larger datasets and more sophisticated computations. Reproducibility allows for people to focus on the actual content of a data analysis, rather than on

superficial details reported in a written summary. In addition, reproducibility makes an analysis more useful to others because the data and code that actually conducted the analysis are available. This book will focus on literate statistical analysis tools which allow one to publish data analyses in a single document that allows others to easily execute the same analysis to obtain the same results.
