Here is a unique book. It describes the theories and processes of repairing and adjusting the modern watch in precise and meticulous detail: a thing which has never been done so completely before in the many books on the same subject. As a text book it is a revelation. Taking nothing for granted, except the ability to read and comprehend a simple description of mechanical processes, de Carle takes his reader through every stage and every operation of watch repairing ...and to deal with them thoroughly is quite a programme - it takes 300 pages containing 24 chapters, two appendices and 553 illustrations. The fine draughtsmanship and accurate technical detail of the illustrations set a new standard. Practical Watch Repairing can justifiably claim to be the best illustrated book on practical horology yet issued, and one of the best of its kind on any subject. The publication of the book marks the beginning of a new epoch in the study of the mechanics of horology. From dirt bikes and jet skis to weed wackers and snowblowers, machines powered by small gas engines have become a permanent—and loud—fixture in American culture. But fifty years of high-speed fun and pristine lawns have not come without cost. In the first comprehensive history of the small-bore engine and the technology it powers, Paul R. Josephson explores the political, environmental, and public health issues surrounding one of America's most dangerous pastimes. Each chapter tells the story of an ecosystem within the United States and the devices that wreak havoc on it—personal watercraft (PWCs) on inland lakes and rivers; all-terrain vehicles (ATVs) in deserts and forests; lawn mowers and leaf blowers in suburbia. In addition to environmental impacts, Josephson discusses the development and promotion of these technologies, the legal and regulatory efforts made to improve their safety and environmental soundness, and the role of owners' clubs in encouraging responsible operation. Synthesizing information from medical journals, recent environmental research, nongovernmental organizations, and manufacturers, Josephson's compelling history leads to one irrefutable conclusion: these machines cannot be operated without loss of life and loss of habitat.

More and more sailors and powerboaters are buying and relying on electronic and electric devices aboard their boats, but few are aware of proper installation procedures or how to safely troubleshoot these devices if they go on the blink.

From the book's Foreword by Trevor Mole, Managing Director, Property Tectonics; President of the European Association of Building Surveyors and Construction Experts: 'Shu-Ling and Martin have built on their research work and that of others to produce an understandable and readable insight into innovation in small professional service firms. They have successfully unravelled the complex behavioural and organisational forces taking place and created a framework to help practitioners understand the issues and to fashion the right environment in which to foster innovation and deliver economic value.' Small professional practices in the built environment are crucial to the success and long-term viability of the design, construction and property industries. This research-based book addresses the urgent need to better understand the nature and process of innovation in these important firms. The authors offer an analysis of both why and how innovation is a key competitive factor for small professional practices in the built environment. As these practices are located in different business environments and behave in different ways to other types of industry firms, the context-specific methodology to design, implement and assess innovation in small professional practices presented in this book will appeal to researchers and practitioners in surveying and design. Innovation in Small Professional Practices in the Built Environment makes a significant contribution to an underdeveloped area of innovation by offering new theoretical and practical insights and models grounded in results from a 22-month case study of a small professional practice.
