When Cylin Busby was nine years old, she was obsessed with Izod clothing, the Muppets, and a box turtle she kept in a shoebox. Then everything changed overnight. Her police officer father, John, was driving to his shift when someone leveled a shotgun at his window. The blasts that followed left John's jaw on the passenger seat of his car-literally. While clinging to life, he managed to write down the name of the only person he thought could have pulled the trigger. The suspect? A local ex-con with rumored mob connections. The motive? Officer Busby was scheduled to testify against the suspect's family in an upcoming trial. Overnight, the Busbys went from being the "family next door" to one under 24-hour armed guard, with police escorts to school, and no contact with friends. Worse, the shooter was still on the loose, and it seemed only a matter of time before he'd come after John-or someone else in the family-again. With few choices left to them, the Busby family went into hiding, severing all ties to the only life they had known.

Still spry at ninety-three, Theodora has lived long enough to see her family grow into an insufferable bunch of truculent knuckleheads. Having finally gathered the whole bickering brood together for the holidays at her South Carolina home, the grand matriarch pines wistfully for those extravagant, homey Christmases of her childhood. How she misses the tables groaning with home-cooked goodies, the over-the-top decorations, those long, lovely fireside chats with Pearl, her grandmother's beloved housekeeper and closest confidante. These days, where is the love and the joy . . . and the peace? But this is, after all, a magical time. Someone very special has heard Theodora's plea—and is about to arrive at her door with pockets full of Gullah magic and enough common sense to transform this Christmas into the miracle it's truly meant to be.

This book presents the papers from the latest conference in this successful series on fuel injection systems for internal combustion engines. It is vital for the automotive industry to continue to meet the demands of the modern environmental agenda. The story of Mav Caid The Later Years is the third book in the fantasy-fiction series The Life and Times of Mav Caid. The book continues the tale about a naive farmer's son who leaves Bandera, Texas at seventeen to experience life beyond the farm life into which he was born, and to find his niche in the world. After spending five years as a wrangler and drover for Captain John Lytle driving cattle up the Great Western Cattle Trail, Mav strikes out on his own in 1889, arriving in Beaton, Arkansas where he obtains some land and settles in to live off the largess of nature. His plan is to be short-lived when he finds that he cannot ignore his roots as the son of a farmer. Nor can he ignore the magic of Macy, the Arkland Stageline station-keeper's daughter. The first book, Mav Caid The Early Years, was the story of Mav Caid's maturation following the tragedy of his family's murder in Bandera and covers the years 1889 through 1899. The second book, Mav Caid The Middle Years, begins in 1900 and continues the story of Mav Caid as a farmer and entrepreneur in Beaton, and the unpredictable events that occur, such as the responsibility thrust upon him to be the educator and mentor to Ja-ge, an Apache foundling. This book, Mav Caid The Later Years continues the story from 1920 onward but begins with a lookback at the events occurring in Mav Caid's life as a young man driving cattle up the trail.

Water dominates the surface of Earth and is vital to life on our planet. It is a remarkable liquid which shows anomalous behaviour. In this Very Short Introduction John Finney introduces the science of water, and explores how the structure of water molecules gives rise to its physical and chemical properties. Considering water in all three of its states as ice and steam as well as liquid, Finney explains the great importance of an understanding of its structure and behaviour to a range of fields including chemistry, astrophysics, and earth and environmental sciences. Finney describes the role of water in biology, and ends with a discussion of the outstanding controversies concerning water, and some of the 'magical' properties which have been claimed for it. ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable.

This best-selling book is also "#1 book in motorcycle safety" (Nielsen BookScan) and essential reading for all motorcyclists regardless of their years of experience. Author David L. Hough, a revered motorcycle author, columnist, and riding-safety consultant, lays out a clear course for all riders who want to sharpen their handling skills and improve their rides. This second edition, expanded and now in full color, offers new riders and road warriors the exact kind of advice they need to be prepared for anything when on the road, how to avoid accidents, and how to handle the unexpected. Hough, who began motorcycling in the 1960s, tackles every imaginable topic—from the mechanics of the bike, selection of the right-sized bike, and basic riding skills to night riding, group outings, and advanced survival tactics. In the chapter called "Motorcycle Dynamics," Hough spells out the equipment needed and basic skills required to control a bike, and specifically keeping the rider's safety and ability to avoid potentially injurious or fatal crashes. The author is outspoken and direct when it comes to safety, and he emphasizes the importance of the rider's braking abilities and spells out how to improve them. The chapter offers six tried-and-true techniques for quick-stop tactics, critical for every rider to understand and master. He also addresses other vital skills that riders need to evaluate and improve, such as turning, maintaining balance and stability, and steering. He defines, compares, and analyzes the ins and outs of steering and control: direct steering, countersteering, push steering, out-tracking, coning, u-turns, and directional control. The chapter called "Cornering Habits" is a virtual master class in acceleration, deceleration, use of weight, throttle, leaning, and handling challenging terrain. Hough's skill as a photographer and illustrator adds a graphic element to his books that leads to immediate understanding of the concepts he explains. The detail offered in each section of the book can only come from decades on the road, and the author is the consummate instructor, assigning homework to the readers in the form of exercises to practice and improve specific techniques that he outlines and illustrates in the text. Any rider who

would venture out on the road without David Hough's voice in his head takes an unnecessary risk with his own life. Proficient Motorcycling takes riders from long, snaking country roads right into the traffic of the big city, and Hough offers the best advice for riders dealing with the most challenging conditions, whether it's road construction, snap-jawed intersections, skateboarders, or suddenly slippery road surfaces. A critical section of the book offers riders advice on how to deal with automobiles, including aggressive car drivers, oblivious SUV drivers, or "blind" truck drivers. The book offers the kind of first-hand experience that can literally save riders' lives, as illustrated in the chapters "Booby Traps" and "Special Situations," which offer evasive tactics and advice to avoid and handle everything from slick surfaces, curbs, and construction plates to ferocious dogs, hazardous wildlife, and difficult weather conditions. The final chapter of the book, "Sharing the Ride," is geared toward experienced riders who travel together in groups or who travel with a second passenger on the bike. Topics covered are formation, packing for trips, communication between riders, sidecars, trikes, and more. The book concludes with a resources section of organizations, training schools, educational tools, and websites; a glossary of 80+ terms; and a complete index.

Over seven decades, Librarian, Ada Shook, is witness to the racism laced through her Southern city; the paradox of religion as both comfort and torment; and the survival networks created by gay people. Eleven interconnected stories cover the sweep of one woman's personal history as she reaches her own form of Southern womanhood—compassionate, resilient, principled, lesbian.

Sgt. Joe Massey (Retired) shuns the idea of being politically correct with this insider's account of what it's like to be a Washington, D.C. police officer. He leads readers on a series of adventures that span thirty years in law enforcement, beginning as a police rookie in 1983, to his days with the force's elite SWAT team, to his days with the force's Harbor Patrol Branch, and right up to his retirement in 2012. He learned early on that being a police officer is like being an artist: It's open to interpretation. You must make nonbelievers believe and crush anyone who challenges your authority. Over time, his fellow officers became family, and they supported each other through good times and bad. They did their jobs no matter how dangerous the situation—and concerns about public perception rarely entered the equation. Develop a newfound respect for the dangers that police officers face on a daily basis, as well as changes that are leading to "The Erosion of the Thin Blue Line."

Illustrated in full colour throughout, each entry includes a detailed specification table and authoritative performance figures. The line-up features outstanding machines famed for their performance, technical brilliance and good looks.

This invaluable book is a unique collection of tributes to outstanding discoveries pioneered by Leon Chua in nonlinear circuits, cellular neural networks, and chaos. It is comprised of three parts. The first — cellular nonlinear networks, nonlinear circuits and cellular automata — deals with Chua's Lagrangian circuits, cellular wave computers, bio-inspired robotics and neuro-morphic architectures, toroidal chaos, synaptic cellular automata, history of Chua's circuits, cardiac arrhythmias, local activity principle, symmetry breaking and complexity, bifurcation trees, and Chua's views on nonlinear dynamics of cellular automata. Dynamical systems and chaos is the scope of the second part of the book, where we find genius accounts on theory and application of Julia set, stability of dynamical networks, chaotic neural networks and neocortical dynamics, dynamics of piecewise linear systems, chaotic mathematical circuitry, synchronization of oscillators, models of catastrophic events, control of chaotic systems, symbolic dynamics, and solitons. First hand accounts on the discovery of memristors in HP Labs, historical

excursions into 'ancient memristors', analytical analysis of memristors, and hardware memristor emulators are presented in the third and final part of the book. The book is quintessence of ideas on future and emergent hardware, analytic theories of complex dynamical systems and interdisciplinary physics. It is a true Renaissance volume where bright ideas of electronics, mathematics and physics enlighten facets of modern science. The unique DVD covers the artistic aspects of chaos, such as several stunningly melodious musical compositions using chaotic attractors, a virtual gallery of hundreds of colorful attractors, and even a cartoon-like play on the genesis of Chua's circuit that was based on a widely acclaimed performance in Rome and other venues in Italy. In short, it is a veritable kaleidoscope of never-before-published historical, pedagogical, and futuristic technical visions on three timely topics of intense interest for both lay readers and experts alike.

Modern projects are all about one group of people delivering benefits to others, so it's no surprise that the human element is fundamental to project management. The Gower Handbook of People in Project Management is a complete guide to the human dimensions involved in projects. The book is a unique and rich compilation of over 60 chapters about project management roles and the people who sponsor, manage, deliver, work in or are otherwise important to project success. It looks at the people-issues that are specific to different sectors of organization (public, private and third sector); the organization of people in projects, both real and virtual; the relationship between people, their roles and the project environment; and the human behaviours and skills associated with working collaboratively. Thus this comprehensive and innovative handbook discusses all the important topics associated with employing, developing and managing people for successful projects. The contributors have been drawn from around the world and include experts ranging from practising managers to academics and advanced researchers. The Handbook is divided into six parts, which begin with management and project organization and progress through to more advanced and emerging practices. It benefits hugely from Lindsay Scott's expert knowledge and experience in this field and from Dennis Lock's contributions and meticulous editing to ensure that the text and illustrations are always lucid and informative. Larry Grodsky devoted his life to motorcycle safety. Through the riding courses he taught and his "Stayin' Safe" columns in Rider magazine (from 1988 until his untimely death in 2006), he helped thousands of motorcyclists improve their skills and their ability to ride really well. This collection of Grodsky's columns reveals his ability to illuminate complex and sometimes highly technical subjects with an entertaining and personal style, spiced with his trademark wry wit and keen observations of human behavior. A master teacher, Grodsky was constantly learning from his students, always striving to find the best way to lead riders towards the mastery of their two-wheeled vehicles. Many of his columns focus on helping riders develop specific skills (complete with practice exercises), while others deal with the riding environment and riders' mental processes. Although it is packed with information useful to both novice and experienced motorcyclists, this book is not structured as a how-to guide to motorcycle proficiency. Rather, it is a collection of thoughtful essays to be read and savored individually. Readers will be rewarded by the beautifully written stories of a great motorcycle riding instructor who has left his mark on a generation of grateful riders.
