Could I have been one of them? was what Sam McKinney wondered as he retraced, alone, from Puget Sound to Queen Charlotte Strait, the explorations of Captain George Vancouver and his men. In the 1790s, day after day, they had rowed for long hours, camping on rocky beaches in all weathers and charting the intricate coastline for the first time. Two hundred years later, McKinney followed them in his 25-foot sailboat, anchoring in the same locations as they had done, experiencing the same winds and waves, and sharing what McKinney calls the link of vulnerability that is the ever-present condition of all people who go to sea. With his boat, his pipe and the occasional glass of rum, McKinney invites readers along on a perceptive voyage through time and along the magnificent Pacific Northwest coast from Puget Sound through the Georgia and Queen Charlotte Straits. Describing both the historical and contemporary voyages around the Inland Sea, McKinney offers insightful comparisons of what sailors saw and experienced in the 18th century and what they see today. At the end of his trip McKinney, like Vancouver, claims the area he had explored, not by deed of ownership but out of love for the place, its staggering beauty...(and) the memories of the people and cultures who have found homes along its shores. Could he have, indeed, been one of Vancouver's men? He isn't sure, but he would like to have given it a try.

"As novelist and poet Andrei Codrescu points out in the essay that accompanies this selection of photographs from the Getty Museum's collection, Evans's photographs are the work of an artist whose temperament was distinctly at odds with Beals's impassioned rhetoric. Evans's photographs of Cuba were made by a young, still maturing artist who - as Codrescu argues - was just beginning to combine his early, formalist aesthetic with the social concerns that would figure prominently in his later work."--Jacket.

While the military use of drones has been the subject of much scrutiny, the use of drones for humanitarian purposes has so far received little attention. As the starting point for this study, it is argued that the prospect of using drones for humanitarian and other life-saving activities has produced an alternative discourse on drones, dedicated to developing and publicizing the endless possibilities that drones have for "doing good". Furthermore, it is suggested that the Good Drone narrative has been appropriated back into the drone warfare discourse, as a strategy to make war "more human". This book explores the role of the Good Drone as an organizing narrative for political projects, technology

development and humanitarian action. Its contribution to the debate is to take stock of the multiple logics and rationales according to which drones are "good", with a primary objective to initiate a critical conversation about the political currency of "good". This study recognizes the many possibilities for the use of drones and takes these possibilities seriously by critically examining the difference the drones' functionalities can make, but also what difference the presence of drones themselves – as unmanned and flying objects – make. Discussed and analysed are the implications for the drone industry, user communities, and the areas of crisis where drones are deployed.

An introduction to a powerful and flexible network modeling tool for developing and understanding complex systems, with many examples from a range of industries. Design structure matrix (DSM) is a straightforward and flexible modeling technique that can be used for designing, developing, and managing complex systems. DSM offers network modeling tools that represent the elements of a system and their interactions, thereby highlighting the system's architecture (or designed structure). Its advantages include compact format, visual nature, intuitive representation, powerful analytical capacity, and flexibility. Used primarily so far in the area of engineering management, DSM is increasingly being applied to complex issues in health care management, financial systems, public policy, natural sciences, and social systems. This book offers a clear and concise explanation of DSM methods for practitioners and researchers.

The story of how diesel engines and gas turbines, used to power cargo ships and jet airplanes, made today's globally integrated economy possible. The many books on globalization published over the past few years range from claims that the world is flat to an unlikely rehabilitation of Genghis Khan as a pioneer of global commerce. Missing from these accounts is a consideration of the technologies behind the creation of the globalized economy. What makes it possible for us to move billions of tons of raw materials and manufactured goods from continent to continent? Why are we able to fly almost anywhere on the planet within twenty-four hours? In *Prime Movers of Globalization*, Vaclav Smil offers a history of two key technical developments that have driven globalization: the high-compression non-sparking internal combustion engines invented by Rudolf Diesel in the 1890s and the gas turbines designed by Frank Whittle and Hans-Joachim Pabst von Ohain in the 1930s. The massive diesel engines that power cargo ships and the gas turbines that propel jet engines, Smil argues, are more important to the global economy than any corporate structure or

international trade agreement. Smil compares the efficiency and scale of these two technologies to prime movers of the past, including the sail and the steam engine. The lengthy processes of development, commercialization, and diffusion that the diesel engine and the gas turbine went through, he argues, provide perfect examples of gradual technical advances that receive little attention but have resulted in epochal shifts in global affairs and the global economy.

The coastal and archipelago areas in the Baltic Sea are popular destinations for a number of tourists. An important group of tourists is boaters, who visit the coastal areas during a short summer period. Boat owners are sometimes pictured as having a great interest for the nature and a willingness to do right.

Pollution from pleasure boats such as discharges of oil and fuel, antifouling paints and cleaning agents have a negative impact on the coastal environment.

Environmentally sound alternatives exist to some extent, but are not very common. Sustainable alternatives for boaters are lacking behind. One of the underlying purposes of this study was to understand how we can help boat owners change their behaviour and decrease the negative impact on the marine environment. The survey among boaters has been conducted in Finland, Sweden and Denmark with a web based survey ordered by the Keep Sweden Tidy Foundation together with Keep the Archipelago Tidy Association in Finland and the Danish Outdoor Council. The research was performed by SIFO Research International.
