diversity, Mehrotra and Wagner discuss elements of diversity such as gender, race or ethnicity, religious affiliation, social class, rural-urban community location and sexual orientation. Throughout the book, Mehrotra and Wagner present up-to-date knowledge and scholarship in a way that engages readers in active learning. Rather than simply transmitting information, the authors place ongoing emphasis on developing readers' knowledge and skills; fostering higher order thinking and encouraging exploration of personal values and attitudes. Distinctive features of the book include: Opening vignettes for each chapter that present a sampling of how the issues to be discussed apply to diverse elders. Active learning experiences that invite readers to interview diverse elders, conduct internet searches, and give an analysis of a case study. Quizzes at the end of the chapters help readers ascertain the extent to which they have learned the material; the key for each quiz includes details about correct and incorrect responses so that additional learning can occur. Aging and Diversity Online boxes interspersed throughout the book provide internet resources that readers may use to find new research and publications. Suggested readings and audiovisual resources given at the end of each chapter serve as a guide to additional information on topics covered in the chapter. This approach of presenting the material will help the readers understand and apply key concepts and principles in ways that will not only improve the lives of older people they serve, but will also enhance their own aging experience. There has been a decided shift towards desiring greater “relevance” in management education by serving the needs of management practice. The importance of a careful definition of “relevance” and the retention of a critical perspective needs to be asserted. In this respect, what Hugo Letiche and Geoff Lightfoot have done together, and written up in this book, is an outstanding example of a commitment to restore “relevance” via critical engagement to management pedagogy and practice. Their success is a clear demonstration of the practical relevance of imagination, commitment and scholarship. Prof Heather Hopfl (University of Essex)

Electronic circuit design involves designing a circuit that will fulfill its specified function and designing the same circuit so that every production model of it will fulfill its specified function, and no other undesired and unspecified function. This book is composed of nine chapters and starts with a review of the concept of grounding, wiring, and printed circuits. The subsequent chapters deal with the passive and active components of circuitry design. These topics are followed by discussions of the principles of other design components, including linear integrated circuits, digital circuits, and power supplies. The remaining chapters consider the vital role of electromagnetic compatibility in circuit design. These chapters also look into safety, design of production, testability, reliability, and thermal management of the designed circuit. This book is of great value to electrical and design engineers.
