Forget the old concept of medical school taking over your life. It is possible to do great in school while still having a rich and well-rounded life. Whether your dream is having time for international volunteer work, having time to do cutting edge research, having time to be the parent and spouse you want to be, having time to exercise relax and unwind, or just HAVING TIME to live more and work less, Medical School 2.0 is your blue print to thrive as a medical student. This step-by-step guide to medical school teaches: How Dave, a medical student with below-average SAT and MCAT scores used these techniques to go from spending 16 hours a day on medical school and getting a "C" average to spending 1-3 hours a day on medical school and getting the top academic honors, 99.7th percentile on USMLE Steps 1 and 2, induction into

the AOA honor society, and getting into his top choice residency in his top choice location, all the while enjoying the process of learning and having plenty of free time to enjoy life outside of medical school. How to clarify your personal goals for your life in medicine and in medical school and use those to reverse-engineer a personalized and customized curriculum for yourself. How to sift through seemingly infinite study sources and choose the highest yield information for your own unique goals. How to apply the latest research findings in the neuroscience of learning and memory to supercharge your brain's learning potential, maximizing your per-hour learning output. How to structure and schedule your study sessions and your "work days" to maximize your learning potential. What to eat and drink to fuel your brain to form and maintain solid long term memories of what you're learning. This book is the result of hundreds of hours of research interviewing top-performing medical students across the USA to deconstruct the strategies behind their success, researching and integrating the latest science of how our brain's learn, and then distilling the final product into a group of practical, simple, and extremely high yield tools and tricks to both maximize your mind's learning output, to enjoy the process of learning, and to have the time to follow your dreams in medical school and beyond. These are the same strategies that the author used in medical school, continues to use now, and has taught to hundreds of other students who have achieved even better results."

Surgery: A Case Based Clinical Review provides the reader with a comprehensive understanding of surgical diseases in one easy to use reference that combines multiple teaching formats. The book begins using a case based approach. The cases presented cover the diseases most commonly encountered on a surgical rotation. The cases are designed to provide the reader with the classic findings on history and physical examination. The case presentation is followed by a series of short questions and answers, designed to provide further understanding of the important aspects of the history, physical examination, differential diagnosis, diagnostic work-up and management, as well as questions that may arise on surgical rounds. Key figures and tables visually reinforce the important elements of the disease process. A brief algorithmic flow chart is provided so the reader can quickly understand the optimal management approach. Two additional special sections further strengthen the student's comprehension. The first section covers areas of controversy in the diagnosis or management of each disease, and another section discusses pitfalls to avoid, where the inexperienced clinician might get in trouble. The text concludes with a series of multiple choice questions in a surgery shelf/USMLE format with robust explanations. Surgery: A Case Based Clinical Review is based on 20 years of Socratic medical student teaching by a nine-time Golden Apple teaching awardee from the UCLA School of Medicine and will be of great utility for medical students when they rotate on surgery, interns, physician assistant students, nursing students and nurse practitioner students.

OphthoBook is the printed version of the amazing OphthoBook.com online book and video series. The combination of this text, along with the online video lectures, creates the most informative and easy-to-understand ophthalmology review ever written. It is geared toward medical students, optometry students, and non-ophthalmologists who want to learn more about the eye without getting bogged down with mindless detail. The book is broken down into ten chapters: 1. Eye History 2. Anatomy 3. Glaucoma 4. Retina 5. Infection 6. Neuroophthalmology 7. Pediatric Ophthalmology 8. Trauma 9. Optics 10. Lens and Cataract Each chapter also includes "pimp questions" you might be asked in a clinic. Also, an entire chapter of ophthalmology board-review questions, flashcards, and eye abbreviations. Perhaps most useful, each chapter corresponds to the 20-minute video lectures viewable at OphthoBook.com. And lots of fun cartoons!
